Table of Figures.....	XI
Nomenclature	XXI
1 Introduction	1
1.1 Motivation	1
1.2 Wind Power Conversion Systems	3
1.2.1 Wind Turbine Classification	3
1.2.2 Wind Turbine Model Structure	5
1.3 Aim of the Work	7
1.4 Structure of the Work	9
2 Model of the Turbine Aerodynamics	11
2.1 Introduction	11
2.2 Energy Capture from the Wind	11
2.3 Aerodynamics of Rotor Blades	13
2.3.1 Simplified Representation	15
2.4 Simulation using cP- λ Tables	17
2.4.1 Functional Representations for cP- λ Tables	18
2.4.2 Polynomial Fit Representation for cP- λ Tables	19
2.5 Linearized Aerodynamic Models	20
2.5.1 Linearization along the Operation Trajectory	21
2.5.2 Steady state operating trajectory	22
2.5.3 Partial Derivative ΔP_{Θ} : Change of Power with respect to Blade Pitch Angle	25
2.5.4 Partial Derivative $\Delta P_{\Omega,WR}$: Change of Power with respect to Rotor Speed	29
2.5.5 Resulting model structure	33
2.5.6 Calculation initial Values for Wind Speed	33
2.5.7 Operation of the Turbine with Active Power Limitation	34
2.5.8 Comparison with cP- λ Table Representation	39
2.5.9 Comparison with other cP- λ Representations	41
2.6 Representation of Dynamic Inflow Phenomena	42
2.7 Comparison with Measurements	42
2.8 Summary	45

3	Model of the Turbine Structural Dynamics	47
3.1	Introduction	47
3.2	Higher Order Representations of Drive Train, Blades and Tower.....	47
3.2.1	Gearbox Representation	48
3.2.2	Representation of Higher Order Drive Train Eigenfrequencies	49
3.2.3	Detailed Blade Structural Representation.....	50
3.2.4	Tower Shadow, Rotor Imbalance and Rotor Eigenfrequencies	52
3.2.5	Impact of Production Tolerances and Aging Effects.....	52
3.2.6	Tower Representation.....	52
3.3	Single and Two Mass Representation of the Drive Train.....	55
3.3.1	Single Mass Representation of the Drive Train.....	55
3.3.2	Two Mass Representation of the Drive Train.....	56
3.3.3	Comparison of Single and Two Mass Representations	58
3.4	Summary.....	61
4	Model of the Turbine Control	63
4.1	Introduction	63
4.2	Fixed Speed / Limited Speed Range Wind Turbine Control	64
4.3	Variable Speed Wind Turbine Control	66
4.3.1	Operation below Rated Wind Speed.....	66
4.3.2	Operation at and Beyond Rated Wind Speed	70
4.4	Pitch Control Loop	71
4.4.1	Pitch-Speed Controller	72
4.4.2	Pitch Compensator.....	73
4.4.3	Pitch FRT Boost	73
4.4.4	Pitch Actuator Model	74
4.4.5	Pitch Controller and Actuator Models.....	74
4.5	Torque/Active Power Control Loop	75
4.5.1	Power or Torque PI Control	75
4.5.2	Effect of Drive Train Damping on Power Output	76
4.6	Summary.....	80
5	Generator and Converter.....	81
5.1	Introduction	81
5.2	Model of the DFG.....	82
5.2.1	Basic DFG Equations	84
5.2.2	DFG Model Representation.....	84
5.2.3	MSC Control Representations	87
5.2.4	Combined DFG and MSC Model.....	89
5.2.5	LSC Model Representation	90
5.2.6	Aggregated DFG Model	94

5.2.7	Selection of Reference Frame	95
5.2.8	Optional Identification of Model Parameters	97
5.2.9	Simplified Aggregated Model of DFG using First Order Lag	98
5.3	Model of the FSC	98
5.4	Model Structure	100
5.4.1	Implementation of the Norton Equivalent (Current Source)	100
5.4.2	Current Limitation	101
5.4.3	Wind turbine Transformer	104
5.4.4	DC-Link Energy Absorber for FSC	104
5.4.5	Resulting Generator and Converter Model	105
5.5	Validation Results	106
5.5.1	Measurements and Simulations of DFG based Wind Turbines	106
5.5.2	Comparison of Proposed and Simplified DFG Model	108
5.5.3	Measurements and Simulations of FSC based Wind Turbines	109
5.5.4	Validation Results	109
5.6	Summary	111
6	Reactive Power Control of Wind Plants	113
6.1	Introduction	113
6.1.1	Limitations of the existing grid code requirements	113
6.1.2	Typical wind plant configuration	114
6.2	Reactive power Requirements of Power Stations and Wind Plants	115
6.2.1	Reactive Power Control during Normal System Conditions	115
6.2.2	Fast Voltage Control to Sudden Voltage Changes	116
6.2.3	Summary of the Requirements	117
6.3	Reactive Current Contribution of Synchronous Generators	119
6.3.1	Detailed Synchronous Generator Model	119
6.3.2	Simplified Model for Current Calculation during Grid Faults	122
6.3.3	Static Calculation of Synchronous Generator Reactive Current Gain	124
6.3.4	Dynamic Simulation of Reactive Current Gain of Synchronous Generators	127
6.4	Wind Plant Implementation of Reactive Power Control	130
6.4.1	Wind Plant Controller Design	130
6.4.2	Control Structure using Voltage Reference at Turbine Level	133
6.4.3	Control Structure using Reactive Power or Reactive Current Reference at Turbine Level	138
6.5	Evaluation of the Proposed Reactive Power Control Structure	143

6.5.1	Comparison of Wind Plant and Synchronous Generation	143
6.5.2	Background on Reactive Power Control of Wind Turbines with Dead Band during Grid Faults.....	149
6.5.3	Comparison to Wind Plant using Reactive Power Control with Dead Band	152
6.5.4	Comparison to Measurements	156
6.6	Summary.....	158
7	Summary and Conclusion	159
7.1	Generic Wind Turbine Model Development	159
7.2	Wind Plant Reactive Power Control.....	161
8	References	165
8.1	Literature	165
8.2	Publications	171
8.3	Patents.....	174
8.4	Patent Applications.....	175
A	Appendix	177
A.1	Space Vectors	177
A.1.1	Control Representation	178
A.1.2	Negative Sequence Representation.....	178
A.1.3	Zero Sequence Components	179
A.2	Sign Conventions.....	179
A.2.1	Effective Value	181
A.2.2	Symmetrical Components.....	181
A.3	Calculation of Symmetrical Components according to IEC 61400-21.....	182
A.4	FRT Testing Procedure.....	183

Modeling of Wind Turbines with Doubly Fed Generator
System

Fortmann, J.

2015, XXIII, 183 p. 155 illus., 17 illus. in color., Softcover

ISBN: 978-3-658-06881-3
