
Contents

1. Introduction	1
1.1. Motivation and aim of the study	1
1.2. Preliminaries: defining the main concepts	6
1.2.1. External imbalances	6
1.2.2. Sustainability concepts	7
1.3. Outline of the study	9
2. Digression on balance of payments accounting identities	11
2.1. Accounting identity based on trade balance and income balances	11
2.2. Accounting identity based on income and absorption	12
2.3. Accounting identity based on saving and investment	12
2.4. Combining accounting identities	13
3. Intertemporal budget constraint as a sustainability criterion	17
3.1. Long-run budget constraint in the intertemporal approach to the current account	19
3.1.1. Description of the model economy	19
3.1.2. Single-period budget constraint	21
3.1.3. Intertemporal budget constraint in the deterministic setting	23
3.1.4. Specific intertemporal budget constraint in the stochastic setting	30
3.2. Intertemporal budget constraint in a general-equilibrium model	32
3.2.1. Characteristics of the model economy and the representative agent's maximization problem	32
3.2.2. General intertemporal budget constraint	34
3.2.3. Comparison of the general intertemporal budget constraint to the specific intertemporal budget constraint	36
3.3. Discussion of the theoretical framework	38
3.4. Conclusion	42
3.A. Appendix to subsection 3.1.3	45
3.A.1. Recursive substitution method	45
3.A.2. Telescoping Argument	46
3.B. Appendix to subsection 3.2.2	47

4. Empirical implications of the intertemporal budget constraint	49
4.1. Sufficient conditions for the strong notion of sustainability	50
4.1.1. Stationarity of the NIIP and the trade balance	50
4.1.2. First-difference-stationarity of the NIIP	53
4.1.3. Cointegration between current account components	55
4.1.4. Conclusion	59
4.2. Sufficient conditions for the strong and weak notions of sustainability	60
4.2.1. Difference-stationarity of the NIIP of any order	61
4.2.2. Responsiveness of the trade account to the NIIP	63
4.3. Conclusion	71
4.A. Appendix to subsubsection 4.2.2.1	75
4.B. Appendix to subsubsection 4.2.2.2	80
5. Empirical studies on the validity of the intertemporal budget constraint	81
5.1. Testing for stationarity of the NIIP and the current account	81
5.1.1. Overview	81
5.1.2. Linear univariate unit root tests	82
5.1.3. Linear panel-based unit root tests	90
5.1.4. Nonlinear unit root tests	93
5.2. Testing for cointegration between the components of the current account	98
5.2.1. Overview	98
5.2.2. Two-step Engle-Granger methodology	100
5.2.3. Error-correction model tests	102
5.2.4. Autoregressive distributed lag bounds test	103
5.2.5. Gregory-Hansen test with structural breaks	104
5.2.6. Johansen methodology	105
5.2.7. Panel cointegration tests	107
5.3. Testing for the responsiveness of the trade account to the NIIP	108
5.3.1. Wickens and Uctum's (1993) approach	108
5.3.2. Multicointegration approach	109
5.3.3. Bohn's (2007) approach	111
5.4. Conclusion	127
5.A. Appendix to section 5.1	132
5.B. Appendix to section 5.2	143
5.C. Appendix to section 5.3	168
6. Dynamic benchmarks of external sustainability	173
6.1. Dynamic benchmark in the intertemporal approach to the current account	174
6.1.1. Consumption-smoothing current account path under certainty equivalence	174
6.1.2. Consumption-smoothing current account path under certainty equivalence and limited capital mobility	187
6.1.3. Adjusting for consumption tilting under linear-quadratic utility	188
6.1.4. Adjusting for consumption tilting under power utility	191
6.1.5. Introducing habit formation under linear-quadratic utility	193

6.1.6. Incorporating durable goods under linear-quadratic utility	197
6.1.7. Differentiating between traded and non-traded goods under power utility	201
6.1.8. Conclusion	209
6.2. Dynamic benchmark in the portfolio approach to the current account	211
6.A. Appendix to subsection 6.1.7	217
6.B. Empirical studies to section 6.1	220
7. Indicators of external sustainability	235
7.1. Resource gap as a sustainability indicator	235
7.1.1. Non-increasing ratio of net foreign debts as a sustainability criterion	235
7.1.2. Stabilizing the NIIP-to-output ratio at the current or recently observed average level	238
7.1.3. Stabilizing the foreign debt-to-exports ratio at the current level	254
7.1.4. Stabilizing the NIIP-to-output ratio at the level desired by investors	257
7.1.5. Conclusion	266
7.2. “Unsustainability” indicators in a nonstructural approach	267
7.3. Indicators of current account reversals	270
7.4. Indicative thresholds in the IMF’s debt sustainability analysis	276
7.4.1. Debt sustainability analysis for market-access countries	276
7.4.2. Debt sustainability analysis for low-income countries	277
7.4.3. Heavily Indebted Poor Countries Initiative	279
7.4.4. Conclusion	280
7.5. Scoreboard of the Macroeconomic Imbalances Procedure in the EU	281
7.6. Conclusion	284
7.A. Appendix to subsubsection 7.1.2.6	285
7.B. Appendix to section 7.5	286
8. Concluding discussion	291
