1. Introduction	1
2. Theoretical Background	3
2.1. Cox Model and Measurement Error	3
2.1.1. Measurement Error Model	5
2.1.2. Adjustment for Measurement Error in Cox Model	6
2.1.3. Corrected Log-Likelihood and Score Function in Cox and Weibull Model	9
2.2. Model-Based Recursive Partitioning	21
2.2.1. Introduction to Classification and Regression Trees	22
2.2.2. Model-Based Recursive Partitioning	24
3. Implementation	35
3.1. Model-Based Recursive Partitioning in R	35
3.2. Fitting a MOB Weibull Model with Adjustment for Measurement Error	39
4. Simulation Study	55
4.1. Check the <code>fit</code> Function	56
4.1.1. Check the <code>fit</code> Function - only W	57
4.1.2. Check the <code>fit</code> Function - W and F	66
4.2. Structural Changes	71
4.2.1. Structural Changes - single	72
4.2.2. Structural Changes - multi	80
4.3. One Global Model Fit vs. MOB	85
4.4. Conclusion of the Simulation Study	92
5. Conclusion	95
Appendix	101

A. R-Code	101
A.1. <i>SurvRegcorr.r</i>	101
B. Proofs and Derivations	107
B.1. Cox Model - Corrected Log-Likelihood	107
B.2. Cox Model - Corrected Score Functions	108
B.3. Weibull Model - Log-Likelihood	110
B.3.1. Version 2	110
B.3.2. Version 2 = Version 1	110
B.4. Weibull Model - Corrected Log-Likelihood	111
B.5. Weibull Model - Corrected Score Functions	113
B.6. Weibull Model - Corrected Log-Likelihood with Interaction Term	114
B.7. Generating Failure Times	118
B.8. Mean Expected Failure Time	119
C. Results of the Simulation Study	121
C.1. Check the fit function - only W	121
C.1.1. <code>beta.true = -0.2, tau.true = -0.3, prob.cens = 35%</code> and $V \sim N(0, 1)$	121
C.1.2. <code>beta.true = -0.2, tau.true = -0.3, prob.cens = 35%</code> and $V \sim Unif(0, \sqrt{12})$	131
C.1.3. <code>beta.true = 0.4, tau.true = 0.5, prob.cens = 0%</code> and $V \sim N(0, 1)$	140
C.1.4. <code>beta.true = 0.4, tau.true = 0.5, prob.cens = 0%</code> and $V \sim Unif(0, \sqrt{12})$	149
C.2. Check the fit function - W and F	158
C.2.1. <code>beta.V.true = 0.6, beta.F.true = -0.1, tau.true = -0.5,</code> <code>prob.cens = 0%</code> and $V \sim N(0, 1)$	158
C.2.2. <code>beta.V.true = 0.6, beta.F.true = -0.1, tau.true = -0.5,</code> <code>prob.cens = 0%</code> and $V \sim Unif(0, \sqrt{12})$	173
C.3. Structural Changes - single	188
C.3.1. <code>beta.1.true = 0.6, beta.2.true = -0.2, tau.1.true =</code> <code>0.5, tau.2.true = -0.4, prob.cens = 35%</code> and $V \sim N(0, 1)$	188
C.4. Structural Changes - multi	209
C.4.1. Summary of Parameter Estimation	218

C.5. One Global Model Fit vs. MOB	224
---	-----

C.5.1. <code>beta.1.true = 0.6</code> , <code>beta.2.true = -0.2</code> , <code>tau.1.true =</code> <code>0.5</code> , <code>tau.2.true = -0.4</code> , <code>prob.cens = 0%</code> and $V \sim N(0, 1)$.	224
---	-----

Bibliography	235

Model-Based Recursive Partitioning with Adjustment for
Measurement Error

Applied to the Cox's Proportional Hazards and Weibull
Model

Birke, H.

2015, XXIV, 240 p. 65 illus., Softcover
