

Contents

1. Introduction	1
2. Dissipative quantum dynamics	5
2.1. Hamiltonian	6
2.2. Equations of motion for the reduced density matrix . .	16
2.2.1. Quantum master equation	16
2.2.2. Hierarchy equations of motion	21
2.3. Spectral density models	29
2.4. Calculation of optical spectra - response function for-	
malism	39
2.4.1. Linear Response	40
2.4.2. Nonlinear Response	42
3. Energy transfer in light-harvesting complexes	49
3.1. Dimer system	50
3.2. Funnel-like aggregate	66
3.3. Fenna-Matthews-Olson complex	75
4. Summary	83
A. The Rostock HEOM package	85
A.1. Overview	85
A.2. Installation and usage of the programs	90
A.3. Input documentation	92
A.3.1. Run section	92
A.3.2. Task section	95
A.3.3. Parameter section	96
A.3.4. Hamiltonian section	97

A.3.5. Dipole section	97
A.3.6. Interaction section	98
A.3.7. Bath section	99
A.3.8. Initial-RDM section	99
A.3.9. 2D section	100
B. Example inputs	101
B.1. Population dynamics dimer system	102
B.2. Linear absorption spectrum dimer system	104
B.3. 2D-spectrum dimer system	106
C. Electronic vs. vibronic basis	109
Bibliography	113

Dissipative Exciton Dynamics in Light-Harvesting
Complexes

Schröter, M.

2015, XII, 121 p. 20 illus., Softcover

ISBN: 978-3-658-09281-8
