Zur Auftragsklaerung wurde das Verfahren zur kollegialen Beratung und Unterstuetzung eingesetzt und dessen Wirkung wird reflektiert.	WISO
"Respekt und Resultate": Die Deutsche Post DHL setzt auf gesundheitsförderliche	Andreas Tautz	Literatur-nachweis	2010	Wirtschafts-psychologie aktuell	17	2	Studiendesign	Um die psychische Gesundheit seiner Mitarbeiter zu erhalten, setzt der Konzern Deutsche Post DHL auf den Respekt für den Einzelnen und nimmt dabei vor allem seine Führungskräfte in die Pflicht. Keine Gesundheit ohne mentale Gesundheit. Die Deutsche Post DHL (DP DHL) ist mit 500 000 rund um den Globus aktiven Mitarbeitern ein Paradebeispiel für People Business. In einer Stunde interagieren die Beschäftigten mit einer Million Kunden. Fünf Prozent des Welthandelsvolumens gehen durch ihre Hände. der Schlüssel zur Förderung der Gesundheit der Beschäftigten liegt bei den Führungskräften. Bisher ist die Welt kurzfristig orientierter Wirtschaftskennzahlen mit der Welt der Erwartungen der Mitarbeiter und deren wünschen nur schwer in Einklang zu bringen. Um die Motivation und Produktivität der Mitarbeiter verbessern zu können, muss man deren Bedürfnisse verstehen und eine Unternehmenskultur entwickeln, die dies - letztlich ganz im Sinne der Share- und Stakeholder - einfordert. Dazu braucht es nicht zuletzt eine starke HR-Organisation, die diese wertschätzende und am Mitarbeiter orientierte Organisationskultur im Unternehmen vorantreibt und mit Messgrößen versieht. Führung kann die Gesundheit und Beschäftigungsfähigkeit der Mitarbeiter auf 4 Ebenen beeinflussen: gesundheitsförderliche Gestaltung der Arbeit, Entwicklung von Handlungskompetenz, wertschätzende Umgangskultur, individuelle Gesundheitsförderung.	WISO
... and Body Pain: Results from an Employee Survey in the Frame of the MAF-Project "Integrated Health Management in Companies: Employee Survey about Working ...	H Spiegel, N Meyer, C Mollenkopf, D Nowak	Artikel	2011	Das Gesundheitswesen			Studienziel	The aim of the study is to present a compact employee attitude survey for companies within a health care management tool. Beside body pains work-related psychosocial risk factors as well as further influencing factors, are taken into consideration. The questionnaire was evaluated by 6 Bavarian companies. METHOD: Potential influencing factors on physical problems like back pain, neck- and shoulder tension, gastro-intestinal diseases and headache were examined by multiple analysis. Dissatisfaction with working conditions was also examined in the same way. All analyses were carried out age and sex adjusted. RESULTS: Statistical analyses are based on 3 720 employees of 3 companies out of a total of 6 companies who answered the questionnaires. Response rates of the different companies ranged from 34 to 60%. Psychomental demands and psychosocial strains were found to be the strongest predictors for body pains as well as for dissatisfaction with working conditions. CONCLUSIONS: The introduced questionnaire is easy to implement within the framework of a company health care management. It has an holistic approach. We could demonstrate that this instrument is able to reveal multiple aspects of work-related body pain as well as multiple aspects of dissatisfaction with working conditions. Thus it is a starting point for the development of necessary measures for health promotion.	Google Scholar
... o Iowa healthier workforce center for excellence (HWCE): Statewide employer survey regarding adoption of elements of the IOM employee total health management	J Merchant	Artikel	2013	141st APHA Annual Meeting			Studienziel	Background and Objectives: Despite widespread implementation of integrated employee health programs among large employers and federal funding of the NIOSH Total Worker Health Program, there remains a need to define and measure what is meant by "integrated employee health programs". The Employee Total Health Management Model developed and defined in the 2005 IOM report Integrating Employee Health—A Model Program for NASA provided that basis for a 12 domain questionnaire to assess employer implantation by domain, employment size, industrial sector and perceived return-on-investment. Methods: A total of 1,206 Iowa employers participated in the 2012 David P. Lind Benchmark Iowa Employer Benefits Study in which the IOM Model questionnaire was embedded as a Health and Wellness Module. Results: Over 60% of larger employers (250+ employees) reported currently offering programs in 10 of the 12 model domains, as compared to 11-43% among smaller employers (<250 employees). While participation by domain varied by major employment sector surveyed: Government/Education>Health/Social Services>Finance/Insurance/Real Estate>Manufacturing>Retail. Perceived ROI for employee health and wellness programs among the largest employer group (1000+ employees) was \$3.49, for 250-999 \$1.86, and for fewer than 250 \$.039. Conclusions: The development of this IOM model-based questionnaire proved to be a useful method for assessing employer adoption of activities in 12 domains used by the IOM to define/assess integrated employee health. 15 Health management	David J Wise, Alvin C Camus, Thomas E Schwedler, Jeffery S Terhune	Journals	2004	Developments in Aquaculture and Fisheries Science	34		Studien-teilnehmer	Channel catfish health management begins with creating and maintaining a proper living environment for the fish. Good management also includes the design and operation of a production facility that minimizes the impact of stress on the fish. To promote health and minimize stress, fish should be provided with their basic needs: sufficient space, good water quality, a nutritionally complete diet, limited physical disturbance, protection from predators, and prudent handling. Once these needs are met, it is important to limit contact with disease-causing agents and to prevent environmental deterioration. Even in well-designed and properly managed facilities, it is not uncommon for diseases to occur. Once a disease outbreak ensues, effective health management requires three basic steps: problem identification, diagnosis, and corrective management—all of which must be performed in a timely manner to avoid further losses. Whenever multiple factors contribute to the disease process, it makes the diagnosis more difficult and often complicates corrective management. Many fish health problems, such as oxygen depletions, can be recognized and corrected by the fish culturist on the pond bank. This chapter discusses factors affecting the disease process in catfish and steps that can be taken to diagnose disease problems. The chapter provides an overview of the various options for managing infectious diseases. Several specific management procedures for the important catfish diseases are also discussed.	ScienceDirect

A consuming tension in mental health leadership	Rob Warriner	Journals	2009	International Journal of Leadership in Public Services		5	3 Studien-teilnehmer	The emerging role of the consumer movement in shaping the reform of mental health services in New Zealand since the mid-1980s, and in particular in the last five to 10 years, has been considerable. This article suggests that challenges now face a consumer movement born out of institutional oppression, as the successful evolution of community-based service delivery increasingly becomes a reality - changing not just the location, but also the culture, understandings, expectations and exclusivity of mental health services. The experience of being a 'consumer' of mental health services now takes place not so much at the extremities of social life following acute rejection, but within communities that are increasingly diverse, complex, reflective - and often unsure and contradictory. A challenge, then, is for a consumer leadership to remain inclusive of diversity and dynamism of community life.	Emerald
A good education. Modern Healthcare survey finds basic satisfaction with health- management programs -- and a few suggestions	M Romano	Journals	2004	Mod Healthc	34	9	Studienziel	Advanced-degree programs in healthcare are adequately preparing the leaders of tomorrow, industry executives and other respondents indicate in a Modern Healthcare survey. Myron Fottler, left, a professor at the University of Central Florida in Orlando, says programs are becoming increasingly business-oriented to meet the ever-changing demands of the market.	PubMed
A health-related quality management approach to evaluating health promotion activities	Ingela Bäckström, Lina Eriksson, Yvonne Lagrosen	Journals	2012	International Journal of Quality & Service Sciences		4	1 Organisation	Purpose – The purpose of this paper is to describe health promotion activities accomplished within a project and to measure the conditions for sustainable health within the case organizations. Also, the purpose is to test a previously developed measurement approach, which measures health-related quality management.	Emerald
A management approach that drives actions strategically: Balanced scorecard in a mental health trust case study	Stefan Schmidt, Ian Bateman, Jochen Breinlinger-O'Reilly, Peter Smith	Journals	2006	International Journal of Health Care Quality Assurance	19	2	Studienziel	Purpose – Achieving excellence is a current preoccupation in UK public health organisations. This article aims to use a case study to explain how a mental health trust delivers excellent performance using a balanced scorecard (BSC) management approach. Originality/value – This article explains how actions can be structured in connection with a BSC management approach.	Emerald

A review of health and safety leadership and managerial practices on modern dairy farms	GR Hagevoor, DI Doupbrate, SJ Reynolds	Journals	2013	J Agromedicine	18	3	Studien-teilnehmer	As modern dairy operations around the world expand, farmers are increasingly reliant on greater automation and larger numbers of hired labor to milk cows and perform other essential farm tasks. Dairy farming is among the most dangerous occupations, with high rates of injury, illness, and employee turnover. Lower education levels, illiteracy, and limited language proficiency increase the possibility of injury or death associated with higher risk occupations such as dairy. Sustaining a healthy, productive workforce is a critical component of risk management; however, many owners and managers have not received formal training in employee management or occupational health and safety. Optimal dairy farming management should address milk production that is sustainable and responsible from the animal welfare, social, economic, and environmental perspectives. Each of these aspects is interdependent with each other and with a sustainable, healthy, productive workforce. Very few studies address the effectiveness of risk management in the dairy industry. Studies suggest that labor management practices are a potential competitive advantage for dairy farms, but the connection with efficiency, productivity, and profitability has not been clearly demonstrated. Transformational leadership has been associated with improved safety climate and reduced incidence of injury, whereas passive leadership styles have opposite effects. There is a need to develop and evaluate the effectiveness of safety-specific transformational leadership among dairy owners and managers. A systematic approach to risk management should address worker health and safety as an integral component of production, food safety, and animal welfare. A successful program must address the cultural and linguistic barriers associated with immigrant workers.	PubMed

A review of health management research	DJ Hunter, J Brown	Journals	2007	Eur J Public Health			Studienziel	The review of European health management research was undertaken over a 10-year period, from July 1995 to June 2005, to produce an account of the state of research, including its quality, range and any gaps; and to assess the implications of the research, its potential for uptake by policy bodies and the need for future research and the direction it might take. METHODS: To identify relevant research studies and bodies of work, two methods were employed: (i) a standard database search and (ii) special request to members of the European Health Management Association (EHMA) via its electronic newsletter. RESULTS: The results from the database search yielded a modest flow of relevant (at least in terms of the definition of health management employed) material. Only 63 relevant journal articles were finally selected out of 1047 identified. Very few have focused explicitly or primarily on mainstream management issues affecting the public's health. There is also a heavy bias towards heath care systems. Two main conclusions emerged: (i) there exists limited original research in the area of health management; outside the UK, this limitation is even more apparent and (ii) health management appears to be an underdeveloped research area throughout Europe. CONCLUSION: There exists a paucity of public health management research aimed at strengthening the evidence for effective interventions, effective decision-making and priority-setting. There needs to be support for research that not only crosses academic disciplines and institutions but which also embraces the diverse range of organizations and professions engaged in managing and delivering public health. A study of leadership behaviours among chairpersons in allied health programs	DG Firestone	Journals	2010	J Allied Health	39	1	Studienziel	This study was designed to investigate leadership behaviors among chairpersons in allied health programs, based on their perceptions and the perceptions of faculty. Transformational, transactional, and laissez-faire leadership behaviors, as well as organizational outcomes of effectiveness, extra effort, and satisfaction, were measured using the Multifactor Leadership Questionnaire (MLQ Form 5X-Short). A form developed by the researcher was used to gather demographic and program information. One hundred thirty-eight chairpersons and 327 faculty participated in the study. Major findings support the view that chairpersons primarily demonstrate leadership behaviors associated with transformational leadership factors and the contingent reward factor of transactional leadership. Statistically significant differences were found between the mean values of the self-perceptions of chairpersons and faculty for the transformational leadership factors of idealized influence (behavior), inspirational motivation, intellectual stimulation, individual consideration, and organizational outcomes of effectiveness and satisfaction. There was a statistically significant positive correlation, based on the self-perceptions of chairpersons and faculty, of the five transformational leadership factors with the three organizational outcomes and the transactional leadership factor of contingent reward with the organizational outcomes of effectiveness and extra effort. There was a statistically significant negative correlation, based on the perception of faculty, with the management-by-exception (passive) and laissez-faire leadership factors, and the organizational outcomes of effectiveness, extra effort and satisfaction. Transformational leadership has been identified as an effective strategy to adapt to a rapidly changing environment. Further development of the transformational leadership behaviors of chairpersons should be considered a priority for the allied health professions.	PubMed
A time for transformative leadership in academic health sciences	PW Armstrong	Journals	2007	Clin Invest Med	30	3	Studienziel	Academic medicine, in its broadest sense, has made major contributions to human health in the past quarter century. This has been achieved in large part because it has attracted an outstanding cadre of--largely altruistic--professionals. These pioneering efforts have served as the life-blood of the discipline. Their journeys of discovery, often complemented by collaboration with the pharmaceutical, biotechnological and device industry have yielded remarkable insights into the diagnosis, treatment and prevention of disease and been celebrated by a stunning array of Nobel laureates in medicine and related arenas of endeavour.1 The translation of discovery to the bedside, clinic and the community coupled, most recently, with insights into the gap between potential effectiveness and what ultimately occurs as part of health care delivery, have been monumental in scope. This progress has unquestionably been the province of the university based clinician scientist. Within Canada, the emergence of the Canadian Institutes of Health Research, the Canadian Foundation for Innovation, and the Canada Research Chairs has been pivotal in launching the careers of a new generation of clinician scientists. The excitement of discovery, gratification associated with direct patient care, and satisfaction of inspiring learning while engaging the next generation of emerging health professionals is rewarded by a career in academic medicine characterized by extraordinary challenge, fulfillment and meaning. As remarkable as these advances in quantity and quality of life have been (in large part attributable to health care research and its implementation) the promises of molecular medicine and abundant new technologies portend an exciting future whereby academic medicine can build upon its noble and traditional contributions to human health.	PubMed
A value case methodology to enable a transition towards generative health management: A case study from The Netherlands	Arjella van Scheppingen, Nico Baken, Gerard Zwetsloot, Ellen Bos, Frank Berkers	Journals	2012	Journal of Human Resources Costing & Accounting	16	4	Studienziel	Purpose – Health is a main resource for human functioning. Embedding generative health management within organisations, therefore, is useful for health and productivity reasons. Generative health management requires a change in the thinking and actions of all stakeholders, and should be regarded as a system transition that may be supported by a value case. In this study, a value case methodology is described and piloted. The aim was to investigate the efficacy of the value case methodology for generative health management within organisations. Design/methodology/approach – This paper takes the form of a case study, in which the interactive value case methodology is piloted within a research foundation in The Netherlands. Findings – The different perspectives from the internal stakeholders on generative health management were made explicit, and revealed a strong relation between organisational development and health. The interactive value-case methodology has initiated a process in which stakeholders jointly defined the full value of generative health management. During that process, some stakeholders developed an active personal commitment towards the transition. Research limitations/implications – The research was only carried out in one case. The value case methodology is potentially also useful for other transitions (long-term complex developments or system innovations). The case study provided a broad view on the relevance of health for all stakeholders within this single case, and contributed to ownership of the transition. Practical implications – A value case presents stakeholders' multi-perspective visions and preferences with regard to health and organisational development. The participative approach opens up ways to an active commitment of relevant stakeholders who are willing to support transitions. Originality/value – The methodology to assess the full value of complex transitions is still of an explorative nature. The value case methodology may offer innovative ways to support transitions in individuals, organisations and society as a whole.	Emerald
Achieving Organizational Effectiveness through Health Management and Ergonomics	Munirathinam T. Naidu, G. Ramesh	Journals	2011	Advances in Management	4	4	-	Today, organizational effectiveness and employees' performance will be disrupted even by relatively low level of health problems. The way organizations design their health programmes is an important determinant on how much performance they extract from employees. The physical environment can influence the interaction between individuals and organizations. Technology and advancements in the workplaces have their negative impact on the physical environment. Employees see their jobs increasingly becoming dehumanized and result in alienation and frustration. In order to keep them motivated, organizations should start looking after the human needs at workplaces. Efforts must be made at improving working conditions and their attendant conditions like safety, security and benefits which legitimately qualify as quality of work life activity. For this to happen the work environment should be made free from hazards or other factors detrimental to the health and safety of employees. Health management is the systematic process of making adequate provisions for the health of employees at work place and enables them to work more and to stay healthy in the organizations. Management of health is a pre-requisite for employees' efficiency. A safe and healthy work environment that ensures better-working conditions and minimizes the risk of illness at workstations should be created in organisations. Ergonomics is concerned with designing jobs by integrating socio-technical factors of the job and characteristics of job holder. It is the science of balancing between employees and the work they do. It provides a safer and comfortable workplace solution for increased efficiency and enhanced productivity. The principles of ergonomics are being used to improve man-machine system so that an employee can perform the job effectively. Good ergonomics in the workplace results in less absenteeism.	EBSCO
Addiction at work: A challenge for occupational health psychology	Wolfgang Beiglböck, Sandra Feschnmayer	Literatur-nachweis	2009				Studienziel	Discusses challenges for the assessment and management of substance addiction in the workplace for occupational health psychologists. A concise history of intervention and prevention programs is first introduced (employee assistance programs, Alcoholics Anonymous, substance abuse prevention programs initiated by the International Labor Organization), followed by a synopsis of economic repercussions of substance abuse in the workplace. Original causes (work culture, employee attitudes, high-risk occupations) are mentioned, and prevention and intervention processes are examined. Dysfunctional action and corporate codependent behavior are revealed as significant blocks to effective problem analysis and implementation of prevention and intervention programs. Primary and secondary (company-specific) prevention measures are outlined including raising awareness, defining company-specific goals, implementing preventative measures such as drug-testing programs, crisis groups, multiphase programs (linking consistent company policies with support programs for at-risk employees), and executive training. In the context of tertiary prevention, the cooperation between the company and treatment and rehabilitation facilities needs to be defined. Finally, it is noted that evaluation procedures for primary, secondary, and tertiary measures must be implemented to ensure optimal efficacy of the programs. In conclusion, the authors contend that substance abuse prevention and rehabilitation programs must be thoroughly incorporated if they are to be effective, requiring consultants to be familiar with organizational psychology, business administration, and individual company culture and policy. Additional qualification in health economics -- a pre-condition for ENT leadership positions?	G Lehnardt, O Schöffski, S Mattheis, TK Hoffmann, S Lang	Journals	2012	Laryngorhinootologie	92	11	Studienziel	The increasing medical-technical progress as well as the dramatic demographic changes cause problems with regard to rapid enlargement of medical service offers, allocation of resources and a financing shortfall in the German public health system. The economization in the German Health System can also be perceived in ENT departments. MATERIAL AND METHODS: After performing an internet search about the rapidly growing market for qualifications measures in health economics, we hence conducted an anonymous survey for ENT senior doctors and directors of the 34 German University Departments to evaluate their attitude towards, as well as their expectation of such an add-on qualification. RESULTS: Since the German government finalized the health care reform in the year 2000 such qualification measures rapidly developed: amongst others, 26 postgraduate, extra-occupational master programs have been inaugurated. The anonymous survey was answered by 105 ENT doctors (63 senior doctors, 27 vice professors and 15 directors), 63% out of these 105 colleagues considered such an add-on qualification to be mandatory. 41% of the colleagues were already "add-on qualified" in that field, only 10 of them by means of a study program. 71 of 105 colleagues (68%) considered the add-on qualification to be advantageous for their future personal career. With regard to the designated contents of the study program, "Staff Management" was even prioritized to "Hospital Financing" and "Cost Accounting". CONCLUSION: Aspects of management and a (health-) economical basic knowledge became an integral part of the daily routine for "first-line management doctors" also in (University) ENT-departments. Administrative professionals in the management of the Unified Health System: the social division of labor	FL Guizard, MLS Cunha	Artikel	2012	Trabalho, Educacao e Saude			Sprache	O artigo analisa a inserção dos profissionais administrativos de nível médio nos serviços de saúde, visando problematizar sua atuação nas estruturas e relações de poder que conformam tais instituições. São apresentados dados relativos à compreensão desses trabalhadores sobre o papel que desempenham e as relações que vislumbram entre seu processo de trabalho e a gestão do Sistema Único de Saúde. O estudo foi desenvolvido em uma região de saúde do município do Rio de Janeiro, por meio do mapeamento dos processos de trabalho administrativos de nível médio nas diferentes instituições públicas de saúde desse território. Foram realizadas 44 entrevistas semiestruturadas, abrangendo os diferentes processos identificados. Os resultados indicam que a hierarquização do processo decisório está associada à desvalorização desses profissionais, que se percebem como meros executores das definições traçadas pelos níveis hierárquicos superiores. Concluímos que a racionalidade administrativa instrumental permanece hegemônica no território. Esses aspectos levam à reflexão sobre as possibilidades de avançar a consolidação do SUS sem a adesão dos atores sociais implicados em sua construção cotidiana, dentre os quais destacamos os agentes administrativos em seu papel estratégico nos processos de gestão. Advancing your leadership skillset: succeeding under health reform requires flexible leaders	JL Tyler	Journals	2012	Health exec.	27	6	Studiendesign	In the article, the author discusses the leadership challenges in the healthcare industry in the U.S. He claims that the Affordable Care Act presented new challenges to leaders of healthcare organizations in order to meet the requirements and maintain a successful operation. Among the behavioral characteristics that leaders should possess are flexibility, adaptability, and excellent communication skills.	PubMed
Aktuelle Entwicklungen des betrieblichen Gesundheitsmanagements in der Automobilindustrie	Joachim Stork, Ulrich Funke	Literatur-nachweis	2005				Studiendesign	Trends im Bereich des betrieblichen Gesundheitsmanagements in der Automobilindustrie werden besprochen. Zunaechst werden die gesetzlichen Grundlagen des betrieblichen Gesundheitsmanagements in der Arbeitsschutzgesetzgebung erlaeuert, und grundlegende unternehmerische Aspekte des betrieblichen Gesundheitsmanagements werden dargestellt. Dann wird der Begriff des betrieblichen Gesundheitsmanagements definiert, und die Zielsetzungen werden bestimmt. Anschliessend wird eingegangen auf Handlungsfelder und die Organisationsstruktur des betrieblichen Gesundheitsmanagements, auf die Aussagefaehigkeit von Arbeitsunfaehigkeitsstatistiken, auf den Stellenwert von Gesundheitsfoerederungsprogrammen, auf die Koordination im Rahmen eines integrierten betrieblichen Gesundheitsmanagements (Rolle des Betriebsarztes und der Arbeitsmedizin), auf Zielvereinbarungssysteme im Rahmen des betrieblichen Gesundheitsmanagements (illustriert am Beispiel "Zielvereinbarungssystem Gesundheitsstand" der Audi AG), auf den demografischen Wandel als die wichtigste Herausforderung an Gesundheitsmanagementsysteme und auf die Umsetzungsvoraussetzungen des betrieblichen Gesundheitsmanagements. Abschliessend wird kurz die derzeitige Situation des betrieblichen Gesundheitsmanagements in deutschen Automobilunternehmen skizziert.	WISO
An empirical analysis of the effectiveness of occupational health and safety management systems in SMEs	Pablo Arocena, Imanol Núñez	Journals	2010	International Small Business Journal	28	4	Studienziel	This article analyses the effectiveness of occupational health and safety (OHS) management in small and medium-sized enterprises (SMEs). In particular , we (1) provide an overview of the implementation of occupational risk preventive activities in a sample of SMEs; (2) characterize alternative approaches of OHS management systems; (3) assess the effectiveness of the identified OHS systems in occupational safety outcomes; and (4) analyse the factors affecting the adoption of such OHS systems. The study is based on primary data obtained by means of a survey on OHS management in 193 Spanish manufacturing SMEs. The analysis disentangles differences between the OHS activity of small-sized enterprises (SSEs) – those under 50 employees -- and medium- sized enterprises (MSEs) -- 50-250 employees. We find evidence that the effort and type of OHS management system does significantly affect the injury rate. More specifically, firms that complement traditional technical preventive activities with people and organization-oriented procedures are the most effective in reducing occupational accidents. Such advanced OHS systems are significantly less developed in SSEs. Our results also reveal that the choice of OHS system is determined by the quality of industrial relations, rate of unionization, intensity of price-based competition, access to public aid and training activities provided by the OHS public agencies, technology intensity, and the manual nature of workers' tasks	EBSCO
An employee total health management-based survey of iowa employers	JA Merchant, DP Lind, KM Kelly	Artikel	2013	Journal of occupational ...	55	12	Studienziel	OBJECTIVE: To implement an Employee Total Health Management (ETHM) model-based questionnaire and provide estimates of model program elements among a statewide sample of Iowa employers. METHODS: Survey a stratified random sample of Iowa employers, and characterize and estimate employer participation in ETHM program elements. RESULTS: Iowa employers are implementing less than 30% of all 12 components of ETHM, with the exception of occupational safety and health (46.6%) and workers' compensation insurance coverage (89.2%), but intend modest expansion of all components in the coming year. CONCLUSIONS: The ETHM questionnaire-based survey provides estimates of progress Iowa employers are making toward implementing components of Total Worker Health programs.	Google Scholar

An integrated framework to achieve interoperability in person-centric health management	F Vergari, T Salmon Cinotti, A D'Elia, L Roffia, G Zamagni, C Lamberti	Journals	2011	Int J Telemed Appl			Studienziel	The need for high-quality out-of-hospital healthcare is a known socioeconomic problem. Exploiting ICT's evolution, ad-hoc telemedicine solutions have been proposed in the past. Integrating such ad-hoc solutions in order to cost-effectively support the entire healthcare cycle is still a research challenge. In order to handle the heterogeneity of relevant information and to overcome the fragmentation of out-of-hospital instrumentation in person-centric healthcare systems, a shared and open source interoperability component can be adopted, which is ontology driven and based on the semantic web data model. The feasibility and the advantages of the proposed approach are demonstrated by presenting the use case of real-time monitoring of patients' health and their environmental context.	PubMed
An Introduction to the International Initiative for Mental Health Leadership (IIMHL)	Fran Silvestri, Janet Peters	Journals	2007	International Journal of Leadership in Public Services		3	2 Studienziel	The International Initiative for Mental Health Leadership (IIMHL) and The International Journal of Leadership in Public Services are pleased to announce that an association has been recently established. The IIMHL will be using future issues of the Journal as a vehicle for the dissemination of its research and information and will be publishing an annual supplement to the Journal reporting on the IIMHL's annual leadership exchange and conference. As background to pieces for future issues, this article provides an introduction to the IIMHL.	Emerald
An Investigation into Hotel Employee Health Management in Huangshan City	C Wenjing, J Shuwen	Artikel	2011	Journal of Huangshan University			Studienziel	Employee health management and staff physical of hotels in Huangshan City were investigated and analyzed.The results showed that the 11 hotels surveyed have different levels of health management services,the higher star hotel,the more extensive services,the greater the proportion of moderate constitution,the smaller the proportion of pathological constitution.The results also showed that none of the surveyed hotels have set up special counseling and health records site,the hotel employee health management is still in the spontaneous stage in Huangshan City.Recommendations have been proposed to build on the hotel employee health management system. An open e Health platform for health management using adaptable service profiles	CE Chronaki, P Lelis, F Chiarugi, D Trypakis, K Moumouris, H Stavrakis, G Kavlentakis, N Stathiakis, M Tsiknakis, SC Orphanoudakis	Journals	2004	International Congress Series	1268		keine Organisation	An open eHealth platform for health management using adaptable service profiles for different medical specialties is currently being validated in the regional health information network (RHIN) of South Aegean in Greece. The core of the installation is an electronic health record (EHR), customized for primary care, that has been extended with advanced eHealth services. Users of the EHR can create an active episode folder by selecting an eHealth service profile. Relevant clinical data can be added to the folder and users will be aware or be notified of updates. Once in a folder, a connected user perceives the actions of other users in the same folder and may use medical devices in a collaborative manner. The underlying service engineering framework allows maintenance of service profiles without disrupting the operation of the system. Preliminary results show that end-users have recognized the efficiency of the system and are eager to use it in managing the health of their patients both in their office and at the patients' home.	ScienceDirect
AN XML-based framework for personalized health management	HJ Lee, SH Park, BS Jeong	Journals	2006	Stud Health Technol Inform			Studienziel	This paper proposes a framework for personalized health management. In this framework, XML technology is used for representing and managing the health information and knowledge. Major components of the framework are Health Management Prescription (HMP) Expert System and Health Information Repository. The HMP Expert System generates a HMP efficiently by using XML-based templates. Health Information Repository provides integrated health information and knowledge for personalized health management by using XML and relational database together.	PubMed
Analyseinstrument für gesundheits- und entwicklungsförderliches Führungsverhalten: ...	Sylvie Vincent	Literatur- nachweis	2012	Zeitschrift für Arbeits- wissenschaft	66	1	-	Der Einfluss des Führungsverhaltens auf die Gesundheit von Mitarbeitern gewinnt in den letzten Jahren sowohl in der Forschung als auch in der betrieblichen Praxis zunehmend an Aufmerksamkeit. Gegenstand der Studie ist die Entwicklung und Validierung eines Instruments zur Messung gesundheits- und entwicklungsförderlichen Führungsverhaltens. Als konzeptionelle Grundlage dient ein integratives Rahmenmodell, das (1) Führung und Wohlbefinden sowie (2) Arbeitsbedingungen und Wohlbefinden miteinander in Beziehung setzt. Dieses Instrument wurde anhand einer Stichprobe von 822 Beschäftigten validiert. Die Skalenstruktur konnte mittels konfirmatorischer Faktorenanalyse bestätigt werden. Die Skalen zeigen gute psychometrische Kennwerte. Zusammenhangsanalysen mit Befindensvariablen weisen auf eine gute Kriteriumsvalidität hin. Die Überprüfung der inkrementellen Validität bekräftigt die Bedeutsamkeit der neu entwickelten Führungskonstrukte für das Befinden der Mitarbeiter.	WISO
Analyzing best practices in employee health management: how age, sex, and program components relate to employee engagement and health outcomes	PE Terry, J Grossmeier, DJ Mangen, SB Gingerich	Journals	2013	J Occup Environ Med	55	4	Studienziel	Examine the influence of employee health management (EHM) best practices on registration, participation, and health behavior change in telephone-based coaching programs. METHODS: Individual health assessment data, EHM program data, and health coaching participation data were analyzed for associations with coaching program enrollment, active participation, and risk reduction. Multivariate analyses occurred at the individual (n = 205,672) and company levels (n = 55). RESULTS: Considerable differences were found in how age and sex impacted typical EHM evaluation metrics. Cash incentives for the health assessment were associated with more risk reduction for men than for women. Providing either a noncash or a benefits-integrated incentive for completing the health assessment, or a noncash incentive for lifestyle management, strengthened the relationship between age and risk reduction. CONCLUSIONS: In EHM programs, one size does not fit all. These results can help employers tailor engagement strategies for their specific population.	PubMed
Application of Cost-Benefit Analysis to Construction Health and Safety Management	Elias O. Ikpe, Keith Potts, David Proverbs, David Oloke	Journals	2007	AACE International Transactions			Studienziel	The article highlights the application of a cost benefit analysis as a means of enhancing construction health and safety management. It is envisioned that the approach will immensely help duty holders gain better insight into underlying cost implications of health and safety management. It will play a crucial role in facilitating the understanding of accidents reduction in the construction industry.	EBSCO

Approach for measuring health-related quality management	Yvonne Lagrosen, Ingela Bäckström, Håkan Wiklund	Journals	2012	The TQM Journal		24	1 -	Purpose – The purpose of this paper is to develop an approach to measuring health-related quality management based on earlier research on the connection between quality management and employee health. Design/methodology/approach – A questionnaire was developed and a research study was carried out at a manufacturing company. The constructs were tested for internal reliability using Cronbach's alpha tests. The dimensions' correlations with employee health were checked using Pearson correlation. Findings – Three of the dimensions were correlated with the perception of employee health: "presence/communication" and "integrity" derived from leadership commitment, and "influence" derived from everybody's participation. These findings substantiate earlier studies indicating a relationship between visible, clear leadership and employee health. They are also in line with earlier findings of how the possibilities to influence their own work promote employee health and work ability. The paper provides a proposal as to how managers can proceed in the measurement and evaluation of quality management efforts related to employee health. Research limitations/implications – The research is conducted as a single research study in one industrial manufacturing company. Further research should be conducted in other organizations from different lines of business with the same conditions and in organizations with different conditions. Practical implications – This approach can be used by managers for gaining insight into underlying mechanisms in the organizational culture related to employee health from a quality management perspective. This could lead to improved employee well-being, satisfaction and motivation. It could be used as a first step for improvements when implementing health-related quality management "to break the ice" and it could be followed up by qualitative methods. Originality/value – Traditional ways of measuring health are rarely connected to quality management. Only requiring small resources, this approach to measuring health-related quality management can add to an understanding of underlying mechanisms.	Emerald
Approaches to leadership development used by deans of allied health	R Bamberg, E Layman	Artikel	2004	Journal of Allied Health	33	2	Studien-teilnehmer	Deans and directors of allied health units in member institutions of the Association of Schools of Allied Health Professions (ASAHP) were surveyed to determine their approaches to leadership development. Of 99 deans and directors surveyed, 75 (76%) responded. All respondents had held at least one academic administrative position before their current position; assistant or associate dean were the most common positions. The respondents' leadership development included participation in service to the ASAHP or another health or allied health association. More female respondents (67%) than male respondents (47%) reported being mentored. Most frequently listed programs, workshops, and activities for leadership development were Harvard University's Management Development Program, regional allied health deans groups, and institutional leadership programs. Of respondents, 60% viewed professional experience as being more beneficial in leadership development than formal programs, workshops, and activities. The most important skills directly developed from such activities were strategic planning and forecasting, having a vision, and team or collaboration building.	Google Scholar
APRN expertise: the Collaborative Health Management Model	SW Matthews, MA Brown	Journals	2013	Nurse Pract	38	1	Studien-teilnehmer	The Collaborative Health Management Model fosters teamwork between nurse practitioners and physicians based on an egalitarian partnership. It serves to operationalize the "Future of Nursing's" call for Advanced Practice Registered Nurses to deliver high-quality chronic disease management using their full abilities: a unique professional lens, expertise in team-based care, and patient partnerships. Arbeit und Gesundheit - Betriebliches Gesundheitsmanagement	Silvia Deplazes, Hansjörg Künzli	Literatur- nachweis	2010	IN: Birgit Werkmann- Karcher, Jack Riegiker			Studienziel	Die Rolle des betrieblichen Gesundheitsmanagements (BGM) wird thematisiert. Nach allgemeinen Anmerkungen zu Prävention und Gesundheitsförderung sowie zur Gesundheit in der Arbeitswelt werden das BGM definiert, seine Umsetzung erläutert, und Case-Management und Fehlzeiten-Management werden als sich ergänzende Bausteine des BGM unterschieden. Es wird betont, dass sich das BGM fuer die Mitarbeitenden und die Organisation lohnt: Es hilft den Mitarbeitenden, ihr individuelles Gesundheitsverhalten zu verbessern und ihre Bewältigungsressourcen zu stärken. Die Organisation spart Versicherungsprämien und profitiert von der erhöhten Produktivität ihrer Mitarbeitenden. Durch die doppelte Zielsetzung von BGM, der Veränderung der Verhältnisse und des Verhaltens, ist es immer auch Organisationsentwicklung und darf nicht als isolierte, nur auf die Mitarbeitenden oder einzelne Prozesse gerichtete Massnahme betrachtet werden. Ohne die Einbindung der Geschäftsleitung sind verhältnisbezogene Massnahmen nicht oder nur in geringem Ausmass möglich, aber auch ohne Partizipation der Mitarbeitenden wird die Umsetzung scheitern. Des Weiteren wird deutlich gemacht, dass der Wahrung der Autonomie und dem Persönlichkeitsschutz der Mitarbeitenden bei allen Prozessen des Gesundheitsmanagements oberste Priorität eingebracht werden muss.	WISO
Arbeit und Gesundheit - Risiken, Ressourcen und Gestaltung	Peter Richter, Gabriele Buruck, Claudia Nebel, Sandra Wolf	Literatur- nachweis	2011	IN: Eva Bamberg, Antje Ducki, Anna- Marie Metz			Studiendesign	In einem Ueberblick wird informiert ueber den Wissenstand zum Thema Arbeit und Gesundheit. Dabei werden folgende Aspekte besprochen: (1) sozioökonomische Veränderungen der Arbeitswelt und seelische Gesundheit, (2) Gesundheitsressourcen und Handlungsfaehigkeit, (3) Stress und Belastungs-Beanspruchungs-Konzepte, (4) psychosoziale Risikomodelle (Person-Environment-Fit-Modell, Job-Demand-Control-Modell, vollständige versus partialisierte Taetigkeitsstrukturen, Effort-Reward-Imbalance-Modell, Job-Demand-Resources-Modell), (4) Kombinationswirkung psychischer Belastungen (Cinderella-Hypothese, Belastungen durch die Arbeitsumgebung), (5) Diagnostik und Intervention psychischer Belastungen und Beanspruchungen (bedingungsbezogene versus personbezogene Ansätze, Diagnostik auf individueller Ebene versus auf Gruppenebene, partizipatives Design und Gesundheitszirkel), (6) Kosten-Nutzen-Bewertung von Gesundheitsinterventionen. Assessing the health information needs of the emergency preparedness and management community	Murray Turoff, Starr Roxanne Hiltz	Journals	2008	Information Services	28	3/4	Studiendesign	Thirty four professionals who are part of a community of practice in the field of health related emergency response management provided information about the sources of information that they currently use the most, as well as their unmet information needs, and the kinds of information systems tools they would like to have. This professional community relies heavily on the Web, but they report severe information overload, in terms of not easily being able to find the kinds of information they want, amid the deluge of information that is there. In particular, they would find a system that uses social tagging and social recommender system features to be very useful for accessing relevant documents in the "gray literature". We suggest that services such as these will be increasingly important for professional communities in general.	EBSCO	
Assessing the impact of health management approaches on system total cost of ownership	TJ Wilmering, AV Ramesh	Literatur-nachweis	2005	Piscataway			Studienziel	The integrated diagnostics and integrated vehicle health management (IVHM) processes provide frameworks that seek to maximize product availability and simultaneously reduce total system ownership costs. A system engineering approach is required to balance system requirements and design goals with effective implementation methodologies throughout the system acquisition life cycle. Prediction of failures (or prognostics) is just part of an effective, integrated health management solution. Implementation of an efficient methodology will achieve a balance of health management technologies - the right mix of diagnostic, prognostic, and scheduled maintenance approaches based on available resources and life cycle cost considerations. This paper focuses on means for assessing the impact of potential health management approaches on life cycle cost (LCC) as implemented within a system engineering framework. A disciplined approach to selecting appropriate health management solutions to satisfy design and operational requirements will be presented, and a software tool for performing trade studies of alternate approaches' impact on life cycle cost will be discussed. A primary goal was to allow domain experts and health management specialists to perform thorough life cycle cost analyses without requiring the services of specialized cost analysts. OCCAM has been successful in this respect, with initial applications providing immediate payback. A patent application was filed in 2004.	WISO	
Assessing the scholarly impact of health psychology: A citation analysis of articles published from 1993 to 2003	Dominick L.Frosch, Darby Saxe, A Janet Tomiyama, Beth A Glenn, Carissa A Low, Yaniv hanoch , Sarosh J Motivala, Daniella Meeker	Journals	2010	Health Psychology	29	5	Studiendesign	We conducted a citation analysis to explore the impact of articles published in Health Psychology and determine whether the journal is fulfilling its stated mission. Six years of articles (N = 408) representing three editorial tenures from 1993-2003 were selected for analysis. Articles were coded for several dimensions enabling examination of the relationship of article features to subsequent citations rates. Journals citing articles published in Health Psychology were classified into four categories: (1) psychology, (2) medicine, (3) public health and health policy, and (4) other journals. The majority of citations of Health Psychology articles were in psychology journals, followed closely by medical journals. Studies reporting data collected from college students, and discussing the theoretical implications of findings, were more likely to be cited in psychology journals, whereas studies reporting data from clinical populations, and discussing the practice implications of findings, were more likely to be cited in medical journals. Time since publication and page length were both associated with increased citation counts, and review articles were cited more frequently than observational studies. Articles published in Health Psychology have a wide reach, informing psychology, medicine, public health and health policy. Certain characteristics of articles affect their subsequent pattern of citation. (PsycINFO Database Record (c) 2010 APA, all rights reserved).	PsycNet	
Association between nine quality components and superior worksite health management program results	PE Terry, EL Seaverson, J Grossmeier, DR Anderson	Journals	2008	J Occup Environ Med	50	6	Studienziel	To assess the prevalence of "best practice" program components across a select sample of organizations, and to explore differences in engagement rates and health risk reduction between organizations using "best-practice" and "common-practice" health management approaches. METHODS: Using a retrospective approach, researchers assigned organizations to a "best practice" or "common-practice" group based on well-defined criteria. The study examined group differences in employee health assessment participation rates, health coaching program participation and completion rates, and organizational-level health risk reduction. RESULTS: Best-practice organizations achieved higher levels of engagement than common-practice organizations in both health assessment and health coaching programs. Population-level and intervention-level health risk reduction was 2.35 and 1.08 times higher, respectively, among best-practice organizations compared with common-practice organizations. CONCLUSIONS: This study demonstrates the contribution of quality program components to superior program engagement rates and health outcomes.	PubMed	
Associations between supportive leadership and employees self-rated health in occupational sample	B Schmidt, A Loerbrosks, RM Herr, MG Wilson, MN Jarzock, D Litaker, D Mauss, JA Bosch, JE Fischer	Journals	2013	Int J Behav Med			-	Protecting the health of the work force has become an important issue in public health research. PURPOSE: This study aims to explore potential associations between supportive leadership style (SLS), an aspect of leadership behavior, and self-rated health (SRH) among employees. METHOD: We drew on cross-sectional data from a cohort of industrial workers (n = 3,331), collected in 2009. We assessed employees' ratings of supportive, employee-oriented leadership behavior at their job, their SRH, and work stress as measured by the effort-reward model and scales measuring demands, control, and social support. Logistic regression estimated odds ratios (ORs) and corresponding 95 % confidence intervals (CIs) for the association between the perception of poor SLS and poor SRH controlling for work-related stress and other confounders. Sensitivity analyses stratified models by sex, age, and managerial position to test the robustness of associations. RESULTS: Perception of poor SLS was associated with poor SRH [OR 2.39 (95 % CI 1.95-2.92)]. Although attenuated following adjustment for measures of work-related stress and other confounders [OR 1.60 (95 % CI 1.26-2.04)], the magnitude, direction, and significance of this association remained robust in stratified models in most subgroups. CONCLUSION: SLS appears to be relevant to health in the workplace. Leadership behavior may represent a promising area for future research with potential for promoting better health in a large segment of the adult population.	PubMed	
Attributes of a Successful Professional Exchange: The 2007 International Initiative for Mental Health Leadership (IIMHL) Cincinnati Group	Richard Beinecke, Allen Daniels, Janet Peters, Sally Pitts-Brown, Sonia Chehil, Zoe van Zwabenberg	Journals	2008	International Journal of Leadership in Public Services		4	1	Studienziel	As part of the 2007 International Initiative for Mental Health Leadership (IIMHL) Leadership Exchange and Conference, an international group of professionals met at the University of Cincinnati in Ohio. The focus of this exchange was the behavioural health workforce, leadership projects, and models of leadership and policy. As a part of this leadership exchange the working group (Cincinnati Group) developed the following action plan. The group set as our agenda the production of some tangible projects and useful guidance for IIMHL. These are summarised in this article.	Google Scholar
Aufstiegsförderliche Führung - gut für den Aufstieg, schlecht für die Gesundheit?	Sabine Korek, Thomas Rigotti	Buch	2012	Gruppendynamik und Organisationsberatung	43	3	-	Der vorliegende Beitrag stellt das Konzept der aufstiegsförderlichen Fuehrung vor und untersucht dessen Zusammenhaenge mit Indikatoren des Berufserfolgs und der psychischen Beanspruchung. Es werden vier Dimensionen aufstiegsförderlicher Fuehrung beschrieben: Delegation herausfordernder Aufgaben, Feedback, Vertrauen und direkte Foerderung. Zunaechst wurde getestet, ob aufstiegsförderliche Fuehrung positive Zusammenhaenge mit objektiven und subjektiven Indikatoren des Berufserfolgs zeigt. Beruflicher Aufstieg ist haufig mit Mehrarbeit verbunden, und stellt einen Risikofaktor fuer die psychische n Beanspruchung dar. Deshalb wurden weiterhin Effekte auf psychische Beanspruchung und Work-Home-Interferenz untersucht. Es wurden negative Zusammenhaenge mit Beanspruchung und Work-Home-Interferenz erwartet, da aufstiegsförderliche Fuehrung viele Ressourcen beinhaltet, die aufstiegsrelevante Mehrbelastungen puffern koennen. In einer Laengsschnittbefragung im Abstand von einem Jahr mit 581 Teilnehmerinnen und Teilnehmern verschiedener Organisationen zeigten vor allem Delegation und Foerderung positive Zusammenhaenge zu verschiedenen Indikatoren des subjektiven und objektiven Berufserfolgs. Fuer die psychische Beanspruchung und die Work-Home-Interferenz war vor allem Feedback ein protektiver Faktor. Es werden weiterer Forschungsbedarf und praktische Implikationen diskutiert.	WISO	
Augmented interactive starfield displays for health management	L Rasmussen, J Starren	Journals	2007	AMIA Annu Symp Proc			Studienziel	Increased adoption of healthcare technology has resulted in vast amounts of data available to healthcare providers and administrators. To help navigate these large data sets, we propose the use of a starfield display with dynamic query filters. This allows users to quickly view high-level trends or to drill down to a single data point. The utility of such displays is demonstrated for review of both patient-specific and cross-patient data sets.	PubMed

Die Beitrage umfassen neben drei Positionsreferaten einen philosophischen Gastbeitrag, Beitrage zu verschiedenen Symposien (Persoenlichkeit und Gesundheit; Soziale Unterstuetzung; Theorie des geplanten Verhaltens und Erweiterungen; Adipositas im Kindes- und Jugendalter; Subjektives Wohlbefinden in der Gesundheits-psychologie; Erhebungsmethoden und Anwendungsbeispiele; Psychokardiologie - soziale Unterstuetzung, psychisches Wohlbefinden und die Relevanz von Geschlechtsunterschieden), eine Podiumsdiskussion zum Thema "Professionalisierung in der Gesundheitsfoerderung sowie Forschungsreferate zu unterschiedlichen Themen der Gesundheits-psychologie	WISO
Benefits and barriers of construction health and safety management (HSM): Perceptions and practioners within design organisations	Nicholas Chileshe, Emmanuel Dzisi	Journals	2012	Journal of Engineering, Design and Technology	10	2	Studienziel	Purpose – The purpose of this study is to investigate the perceptions of practitioners working within the UK design organisations on the perceived benefits of health and safety management (HSM). It further explores whether these perceptions could be influenced by the external factors such as the length of service in employment, organisation size, and the professional disciplines and educational backgrounds of the respondents. The study proposes the HSM index, an indicator reflecting the level of benefits from HSM approaches within the construction sector. Design/methodology/approach – Using a data triangulation approach involving quantitative and qualitative methods and a KAP (knowledge, attitudes and perceptions) approach, a total of 110 questionnaires were distributed to the practitioners drawn from the small and medium sized design organisations within the UK, of which only 30 were deemed usable, giving a response rate of 27.3 per cent. Findings – The ranking analysis suggest that "safer workplace", "enhanced company reputation", and "decrease in accidents" as the most important benefits arising from deployment of HSM programmes among the practitioners whereas "improved work performance", "increased organisational performance ", and "reduced sickness and absence from work" though least ranked, still attained medium level of benefits. The findings further identified organisational skills as the most desirable for the effective implementation of safety management by project managers. The overall weighted HSM Index of 3.68 implies that the small and medium sized UK constructional related organisations perceive the benefits that arise from the deployment of HSM systems as medium. Originality/value – The findings may help construction practitioners in reviewing decisions factors when they consider implementing HSM during the various stages of the construction process, from feasibility, design, tender and actual construction stage, also for improving their HSM approaches through considerations of the cognitive impacts. Beschäftigungsfähigkeit, gesundheitliche Potenziale und altersflexibles Führen	Gottfried Richenhagen	Literatur-nachweis	2007	Personalführung	40	8	Studiendesign	Anforderungen an Unternehmen unter dem gegebenen demographischen Wandel werden erörtert. Ausgehend davon, dass kuenftig immer mehr aeltere Beschaeftigte in Unternehmen arbeiten werden, wird einer alternsgerechten Personalarbeit und Fuehrung eine erhoehnte Bedeutung beigegeben. Um dauerhaft erfolgreich zu sein, muessen Unternehmen ihre Mitarbeiter durch geeignete Arbeits- und Unternehmensstrukturen darin unterstuetzen, anpassungsfaehig zu werden oder zu bleiben. Erforderliche Massnahmen zur Foerderung der Beschaeftigungsfahigkeit basieren auch auf dem Erkennen und Forcieren von Entlastungsfaktoren; dabei soll die Gesundheit der Beschaeftigten im Mittelpunkt stehen. Im Zusammenhang mit dem Erhalt der Beschaeftigungsfahigkeit wird die Kompetenz zur aktiven Arbeits- und Lebensbewaeltigung fuer wesentlich erachtet. Auf der Grundlage skizzierter Forschungsergebnisse werden folgende Faktoren einer auf den Prozess des Alterns im Erwerbsleben ausgerichteten Personalfuehrung genannt: realistische und vorurteilsfreie Einschaeztung des Leistungsvermoegens aelterer Mitarbeiter; Anerkennung ihrer Leistung und gegebenenfalls Thematisierung ihrer Einschränkungen; kooperativer Fuehrungsstil und Zulassen individueller Arbeitsplanung von aelteren Beschaeftigten; Dialog und Erfahrungsaustausch zwischen juengeren und aelteren Beschaeftigten; Gestaltung alternsgerechter Erwerbsverlaeufe zur Foerderung von Motivation und Leistungsfahigkeit; Beachtung und positive Beeinflussung des Weiterbildungsverhaltens aelterer Mitarbeiter. Betriebliches Gesundheitsmanagement	Thorsten Uhle, Michael Treier	Literatur-nachweis	2011				-	Kernprozesse und neue Wege in der betrieblichen Gesundheitsfoerderung (BGF) werden in Lehrbuchform dargestellt. Auf psychologischer und betriebswirtschaftlicher Grundlage wird eine umfassende Konzept der BFG mit vielen Hinweisen fuer die Praxis erarbeitet. Fuenf der sechs Kapitel enthalten ueberdies Interviews mit Fachleuten, die in der betrieblichen Gesundheitsfoerderung aktiv sind. Die beiliegende CD-ROM enthaelt Praesentationen (z.B. zur Einfuehrung von BGF, Burnout, Fehlzeitenanalysen), Workshop-Beschreibungen und andere Arbeitsmaterialien. - Inhalt: (1) Eckpfeiler der BGF (Unser Verstaendnis von BGF; Entwicklungen und Trends; im Spannungsfeld zwischen Gesetz und betrieblicher Realitaet; BGF im Dialog: Wohin geht der Weg?). (2) Maxime: Risiko bestimmen und Ressourcen fordern (Ordnung im Begriffschaos schaffen; Begriffsdefinitionen; Risikofaktoren im Betriebsalltag bestimmen; Praeventionsressourcen sichten und ausbauen; BGF im Dialog: Brauchen wir Mitarbeiterbefragungen?). (3) Praeventionsauftrag: Auf die Richtung kommt es an (Verhaltens- und Verhaltenspraevention; die Toolbox BGF; Werkzeuge fuer die Psyche: Stress, Konflikte; Werkzeuge fuer den Koerper: Bewegung und Ernaehrung; Werkzeuge fuer das Wissen: Gesundheitskommunikation; Werkzeuge fuer die Motivation; Empowerment; Werkzeuge fuer das Verhalten: Umgang mit Risiken; BGF im Dialog: Welche Bedeutung hat Gesundheitskultur?). (4) Gesundheitscontrolling: Steuerung und Qualitaetsicherung (Erfolgskriterien und Pruefpunkte; Gesundheitsmonitoring und Risikomanagement; Baustein 1: Kennzahlen; Baustein 2: Wirtschaftlichkeitsmessung; Baustein 3: Konzept der Gesundheitsscores; BGF im Dialog: Ist Evaluation noetig?). (5) Herausforderungen: Aktuelle Problemstellungen (Alternsgerechtes Arbeiten; Demografiemanagement; gelassen bleiben: Stressmanagement). (6) Am Ziel: Der gesunde Mensch (Eigenverantwortung: unsere Leitsaetze; BGF im Dialog: Warum ist Selbstbestimmung so wichtig?).	WISO
Betriebliches Gesundheitsmanagement	Gerhard Mahltig	Literatur-nachweis	2009	Forum Supervision	17	34	Studienziel	Die aktuellen Entwicklungen einer flexibilisierten Arbeitswelt stellen Betriebliches Gesundheitsmanagement (BGM) vor neue Herausforderungen. Angesichts zunehmender psychischer Belastungen bei der Arbeit sprechen Experten bereits von einer "neuen Inhumanitaet" der Arbeit. Diese Dimension beruflicher Belastungen wird in Zukunft ein wichtiger Schwerpunkt Betrieblichen Gesundheitsmanagements sein. Ausgehend von dieser These wird ein ganzheitliches Konzept Betrieblichen Gesundheitsmanagements als Organisationsentwicklungsprogramm dargestellt und es werden grundsaeztliche Erfolgsfaktoren von BGM beschrieben. Anhand eines Praxisbeispiels im IT-Bereich wird die Spannbreite des BGM verdeutlicht: Sie reicht von der Struktur- und Personalentwicklung ueber Arbeitsplatz- und Arbeitsorganisationsgestaltung bis hin zur Erhoehung individueller gesundheitlicher Kompetenzen. Komplexe BGM-Projekte stellen hohe Anforderungen an die Kompetenzen und Qualifikationen externer Beratung, auf die viele Unternehmen angewiesen sind. Dieser Aspekt der Organisationsberatung wird abschliessend aufgegriffen.	WISO
Betriebliches Gesundheitsmanagement - Bewertung einzelner Maßnahmen 2013		Statistik					Studiendesign	Die vorliegende Statistik zeigt die Ergebnisse einer Arbeitnehmerumfrage von TNS Infratest im Auftrag der Continentale Krankenversicherung zur Bewertung einzelner Maßnahmen des betrieblichen Gesundheitsmanagements aus dem Jahr 2013. Building an international health management graduate curriculum: analyzing faculty survey results	JS Coyne, E McLaughlin, L Cantoni	Journals	2007	J Health Adm Educ	24	4	Studien-teilnehmer	The development of an international graduate program requires thorough analysis, awareness of the risks involved, and the constraints unique to a particular institution. An assessment of three critical questions must be answered. First, what are the host university investment requirements? Second, what is the degree of enhancement of educational outcomes for the host university? Third, what is the contribution to the international reputations of the host university? This paper presents the result of a survey about these three questions of international educators attending the Third International Conference on Healthcare Systems meeting in Charleston, West Virginia. The results of this survey suggest that there is much to be gained in the educational outcomes and international reputation for both the host campus and the international campus yet the investment is significant. Perhaps of greatest importance is funding, and if possible, external funding is advised. This will attract both high quality students and faculty to participate and/or enroll, thus strengthening the program. There appears to be no optimal strategy or single model that can maximize the educational outcomes and international reputation while minimizing the degree of investment simultaneously. Further research is needed on what is successful and what is not, in terms of investment of time and effort. Hopefully, such research will contribute to higher quality international health management graduate programs that achieve the stated business and educational goals of all parties to reduce the risk of investing both time and money in a new educational venture. Building Capacity for Quality Improvement Through Leadership Development: Lessons from the Health Foundation's Leadership Programme	Jan Walmsley, Karen Miller	Journals	2007	International Journal of Leadership in Public Services		3	2 Studienziel	In 2002/3 the Health Foundation launched an ambitious five-year Programme of investment in leadership development. This investment included resource for simultaneous evaluation (Lucas 2006). Against a background of unprecedented upheaval in healthcare systems in the UK, the Leadership Programme has evolved, encompassing initiatives aimed both at individuals and teams. The Programme has been refined to provide a more explicit focus on leadership for quality improvement. This article reviews what has been learnt from this investment to date, focusing on lessons both for practitioners and for academics. The focus of this paper is what has been learnt from running the Foundation's three individual leadership schemes over the past three years. The authors argue that to be effective talent spotting needs to develop rigorous mechanisms for identification of potential; that there needs to be a sustained focus on quality improvement outcomes if leadership programmes are to deliver more than personal development; that the most effective development is work rather than classroom-based; and that organisational commitment for leadership development is critical if the full impact is to be realised. The authors draw on an extensive evidence base from the Programme evaluation, including some case studies.	Emerald
Building capacity towards health leadership in remote Indigenous communities in Cape York	G Laverack, K Hill, L Akenson	Artikel	2009	Australian Indigenous			keine Organisation	This paper describes an established approach for building capacity used for the first time with Health Action Teams (HATs) in three remote indigenous communities in Cape York	Google Scholar
Burnout & Gesundheitspsychologie: Prävention und Intervention	Theresia Gabriel	Literatur-nachweis	2008	Psychologie in Österreich	28	3-4	Studiendesign	In einem Beitrag ueber Burnout wird versucht, Erfahrungen aus der gesundheitspsychologischen Praxis mit Einzelpersonen und Betrieben vor dem Hintergrund theoretischer Modelle, die sich in der Praxis als hilfreich erwiesen haben, darzustellen. Dabei wird eine systemische Sichtweise von Burnout betont. Die folgenden gesundheitspsychologischen Aufgaben werden besprochen: (1) Bemuehen um begriffliche Klarheit, (2) Sorgfalt in der Verwendung von theoretischen Modellen, (3) Vermeiden von Individualisierung. An einem kurzen Fallbeispiel wird deutlich gemacht, dass die Betrachtung der individuellen Ebene allein zu kurz greift, um nachhaltig ein Burnout-Risiko zu vermeiden; daneben muss auch der private, gesellschaftliche und betriebliche Kontext beruecksichtigt werden. Chapter 3: Health and Productivity Management: The integration of Health and Wellness into Employee Assistance and Work-Life Programs	Michael D. Mulvihill	Journals	2005	Journal of Workplace Behavioral Health	20	1/2	Studienziel	This article focuses on the emergence of Health and Productivity Management (HPM) as a context for understanding the integration of health and wellness into employee assistance and work-life programs. Major factors influencing the growth of HPM are raising medical costs as well as the rising incidence of obesity. The Wake-up Call to Corporate America underscores the need to manage these costs and improve health through the proactive alignment of health-related benefits and programs. HPM is described as an integrated approach to capture direct medical costs as well as the indirect costs associated with poor health and lost productivity. Critical design and implementation features that are likely to contribute to a successful integrated approach are described and highlighted. An HPM case example of a large pharmaceutical company examines a unique cross referral program including considerations for continuous improvement. Finally, the article concludes with key challenges related to marketplace competition, pricing pressures, concerns regarding the sub-optimization of programs and the influence of current health care system changes	EBSCO
Chapter 4.4 - Health Management and Monitoring	Michael Mähler, Werner Nicklas	Journals	2012	The Laboratory Mouse			Studien-teilnehmer	The microbiological status of experimental animals can critically influence the validity and reproducibility of research data. To assess the quality of animals for scientific research and to validate the efficiency of measures for the prevention of agent introduction, proper health monitoring programmes are mandatory. This chapter discusses the significance of infectious agents, definitions of microbiological status, sources of infections and other important aspects (selection of agents, sampling, sentinels, frequency of monitoring, test methods and health report) that are critical to designing an effective health monitoring programme. Collaborations for leadership in applied health research and care: lessons from the theory of communities of practice	R Kislov, G Harves, K Walshe	Journals	2011	Implement Sci			Organisation	The CoP approach can complement traditional 'stage-of-change' theories used in the field of implementation research and provide a basis for designing theory-informed interventions and evaluations. It can help to illuminate multiple boundaries that exist between professional and organisational groups within the CLAHRCs and suggest ways of crossing those boundaries to enable knowledge transfer and organisational learning. Achieving the aims of the CLAHRCs and producing a sustainable change in the ways applied health research is conducted and implemented may be influenced by how effectively these organisations can navigate through the multiple CoPs involved and promote the development of new multiprofessional and multi-organisational communities united by shared practice and a shared sense of belonging—an assumption that needs to be explored by further empirical research. Collaborative action around implementation in Collaborations for Leadership in Applied Health Research and Care: towards a programme theory	J Rycroft-Malone, J Wilkinson, CR Burton, G Harvey, B McCormack, I Graham, S Staniszweska	Journals	2013	J Health Serv Res Policy	18	3	Studienziel	<p>In theory, greater interaction between researchers and practitioners should result in increased potential for implementation. However, we know little about whether this is the case, or what mechanisms might operate to make it happen. This paper reports findings from a study that is identifying and tracking implementation mechanisms, processes, influences and impacts in real time, over time in the Collaborations for Leadership in Applied Health Research and Care (CLAHRCs).</p> <p>METHODS:</p> <p>This is a longitudinal, realist evaluation case study. The development of the conceptual framework and initial hypotheses involved literature reviewing and stakeholder consultation. Primary data were collected through interviews, observations and documents within three CLAHRCs, and analysed thematically against the framework and hypotheses.</p> <p>RESULTS:</p> <p>The first round of data collection shows that the mechanisms of collaborative action, relationship building, engagement, motivation, knowledge exchange and learning are important to the processes and outcomes of CLAHRCs' activity, including their capacity for implementation. These mechanisms operated in different contexts such as competing agendas, availability of resources and the CLAHRCs' brand. Contexts and mechanisms result in different impact, including the CLAHRCs' approach to implementation, quality of collaboration, commitment and ownership, and degree of sharing and managing knowledge.</p> <p>CONCLUSION:</p> <p>Emerging features of a middle range theory of implementation within collaboration include alignment in organizational structures and cognitive processes, history of partnerships, responsiveness and resilience in rapidly changing contexts. CLARHCs' potential to mobilize knowledge may be further realized by how they develop insights into their function as collaborative entities.</p>	PubMed	
Collective work: a challenge for health management	MD Scherer, D Pires, Y Schwartz	Journals	2009	Rev Saude Publica	43	4	Studienziel	<p>Based on ergology and work process theorization, the study aims to contribute to reflections on health collective work, emphasizing its specificity and difficulties in building and managing groups of workers. It deals with work as a human activity that dialectically comprises the application of a prescribed protocol and a unique and historical perspective. Health work involves a relationship among individuals who act in the drama of using themselves and manage their own work; it is influenced by the history of health professions and macro-political determinations. In conclusion, this health work complexity needs to be considered in the process of management of professional teams/groups of workers, in a way that actions can interact and enable the implementation of a new health care project in the perspective of comprehensiveness.</p>	PubMed

Communication, social capital and workplace health management as determinants of the innovative climate in German banks	T Köhler, C Janssen, SC Plath, JP Reese, J Lay, S Steinhäusen, T Gloede, C Kowalski, F Schulz-Nieswandt, H Pfaff	Journals	2010	Int J Public Health	55	6	-	<p>The present study aims to measure the determinants of the innovative climate in German banks with a focus on workplace health management (WHM).</p> <p>METHODS:</p> <p>We analyze the determinants of innovative climate with multiple regressions using a dataset based on standardized telephone interviews conducted with health promotion experts from 198 randomly selected German banks.</p> <p>RESULTS:</p> <p>The regression analysis provided a good explanation of the variance in the dependent variable (R² = 55%). Communication climate (β = 0.55; p < 0.001), social capital (β = 0.21; p < 0.01), the establishment of a WHM program (β = 0.13; p < 0.05) as well as company size (β = 0.15; p < 0.01) were found to have a significant impact on an organization's innovative climate.</p> <p>CONCLUSIONS:</p> <p>In order to foster an innovation-friendly climate, organizations should establish shared values. An active step in this direction involves strengthening the organizations' social capital and communication climate through trustworthy management decisions such as the implementation of a WHM program.</p>	PubMed	
Comprehensive workforce health management -- Not a cost, but a strategic advantage	John Foulke, Bruce Sherman	Journals	2005	Employment Relations Today (Wiley)	32	2	Studienziel	<p>The article reports that rising health-care expenditures have prompted employers in the United States to seek out solutions for effective cost control. Yet, with medical expenses continuing to rise faster than growth and profit margins, companies are struggling to balance employee benefits costs and profitability. Strategies directed at cost containment have dominated the management approach, with cost shifting to employees or reduction of benefits as the two primary methods. Medical providers, employers, and health plans have all played a role in the current state of health care in the United States. The article states that employers have viewed health care as a commodity--a cost to be minimized for a number of reasons.</p>	EBSCO	
Confined site construction: An empirical analysis of factors impacting health and safety management	John P. Spillane, Lukumon O. Oyedele, Jason von Meding	Journals	2012	Journal of Engineering, Design and Technology		10	3	Studienziel	<p>Purpose – The purpose of this paper is to identify, clarify and tabulate the various managerial issues encountered, to aid in the management of the complex health and safety concerns which occur within a confined construction site environment.</p> <p>Design/methodology/approach – This is achieved through conducting extensive qualitative and qualitative research in the form of case studies, interviews and questionnaire survey.</p> <p>Findings – The leading managerial issues in the management of health and safety on a confined construction site are found to be: "Difficulty to move materials around site safely"; "Lack of adequate room for the effective handling of materials"; "Difficulty in ensuring site is tidy and all plant and materials are stored safely"; "Close proximity of individuals to operation of large plant and machinery"; and joint fifth "Difficulty in ensuring proper arrangement and collection of waste materials on-site" along with "Difficulty in controlling hazardous materials and equipment on site".</p> <p>Practical implications – The resulting implication for practice of these results can be summarised by identifying that with sustained development of urban centres on a global scale, coupled with the increasing complexity of architectural designs, the majority of on-site project management professionals are faced with the onerous task of completing often intricate designs within a limited spatial environment, under strict health and safety parameters.</p> <p>Originality/value – The subsequent value of the findings are such that just as on-site management professionals successfully identify the various managerial issues highlighted, the successful management of health and safety on a confined construction site is attainable.</p>	Emerald
Connecting for health - time for leadership		Report	2006	Market Watch	5	1	Studienziel	<p>The article discusses the health agenda set up by the British Government to link every hospital and GP's surgery with IT systems. Richard Granger was appointed to head the National Programme for IT. Some most capable people in the IT business were brought by Granger and they established contracts for a number of national application providers for projects, such as a data spine and centralized hospital bookings, and for five local service providers to deliver new patient administration systems and GP systems on a regional basis.</p>	EBSCO	
Construct factor evaluation model of health Management Center selected by customers with Fuzzy Analytic Hierarchy Process	Chao Chung Ho	Journals	2012	Expert Systems with Applications	39	1	Studienziel	<p>National Health Insurance system has been continuously revised due to rapid changes of society since its establishment, which caused gradual decrease of hospital income year by year, so all hospitals take the initiative to develop self-financed items to partially increase hospital incomes, thus it is crucial to develop assessment model of Health Management Center. The research adopts Fuzzy Analytic Hierarchy Process (FAHP) for customers to make weight assessment on evaluation indexes of Health Management Center. Five major perspectives for customers' selection of Health Management Center are summarized, orderly including (1) Health Management Department (2) Personnel Service Department (3) Health Examination Service Department (4) Marketing Department (5) Environment Department. In addition, in the aspect of importance, "regularly track recheck and provide timely medical service", "provide doctor's commentary and inspection report result and follow-up ambulatory care issues" and "reasonably charge" are consider to be three major indexes in all weights. Research results can be submitted to relevant health examination institutes and personnel of the hospital for reference to earn the opportunity of developing new customers and improve service quality.</p>	ScienceDirect	
Consumer health crisis management: Apple's crisis responsibility for iPod-related hearing loss	Sun-A. Park	Journals	2008	Public Relations Review	34	4	Studien-teilnehmer	<p>This study used a content analysis of Apple's lawsuit concerning hearing loss, exploring how for-profit organizations manage health-related crises when products are suspected of having a potentially devastating impact on consumers' health. By integrating two major approaches in a crisis communication, this study found that severity of damage, locus of control, business size, and the external public's claim were major contingent factors generating the organization's responsibility for consumer health crises.</p>	EBSCO	
Consumer-Driven Health Plans Add Disease-Management Incentives	Allison Bell	Periodical	2004	National Underwriter / Life & Health Financial Services	108	34	Studienziel	<p>Reports on the strategy of marketing consumer-driven health plans in the U.S. Addition of traditional disease-management programs in the features; Introduction of financial incentives to encourage members with conditions such as diabetes and high blood pressure to do the right thing; Inclusion of combined high-deductible health coverage, personal health accounts and decision support tools in the next generation of plans.</p>	EBSCO	
Continuous proactive health management opportunities grow	Scott macStravic	Periodical	2004	Healthcare Strategic Management	22	12	Studienziel	<p>Reports on the growth of the market for continuous proactive partnerships between hospitals' wellness centers, health clubs and spas and local consumers. Factors attributed to the market growth; Estimated value of the wellness market; Significance of the decline in the share value of Krispy Kreme doughnuts; Effective means for achieving the lifestyle and health improvements desired by payers or consumers.</p>	EBSCO	
Cost and benefit of impleementing an occupational safety and health management system (OSH MS) in enterprises in Poland	J Rzepecki	Journals	2012	Int J Occup Saf Ergon	18	2	Studienziel	<p>This article presents a method of assessing the economic outcome of implementing an occupational safety and health management system (OSH MS). Developed at the Central Institute for Labour Protection - National Research Institute (Poland), this method focuses on identifying the economic expenses comprising bookkeeping and alternative cost incurred to implement and improve an OSH MS. The method was next used in a study in 20 enterprises. While varying greatly among those enterprises, the alternative cost of implementing and maintaining an OSH MS was much higher than the bookkeeping cost, which was also much lower than the cost of statutory prevention measures. The implementation of an OSH MS resulted in both tangible and intangible benefits, including reduced premiums for work accident insurance.</p>	PubMed	
Cost Savings from Health Promotion and Stress Management Interventions	John Adams	Journals	2009	OD Practitioner	41	4	Studiendesign	<p>The article describes the costs of workplace stress and poor health habits in the U.S. It states that poor health habits and unmanaged stress can lead to cardiovascular disorders, cancer, and smoking. It cites that organizations can save costs through well designed workplace health promotion and stress management programs which can create a competitive advantage for the organization.</p>	EBSCO	
Creating Standardized Metrics and Benchmarking for Health, Absence and Productivity Management Programs: The EMPAQ Initiative	James A. Curcio	Journals	2010	Compensation & Benefits Review	42	2	Studienziel	<p>Prudent feedback from employer surveys has indicated that standardized metrics and integrated decision-support tools are essential for identifying opportunities to improve programs and reinforce a culture of health and productivity. This article reports on an innovative, nationally standardized metric and benchmarking initiative that provides employers with practical workplace tools and solutions to evaluate the effectiveness of their company's health, absence and productivity management programs, including workers' compensation, family and medical leave, disability, incidental absence, employee assistance programs and group health. The initiative, titled EMPAQ (Employer Measures of Productivity, Absence and Quality), was created in 2001 by the National Business Group on Health's Council on Employee Health and Productivity (CEHP). EMPAQ was successfully launched and implemented by many major companies nationwide in 2003. EMPAQ data collection, analysis and reporting are performed through a partnership with the University of Michigan Health Management Research Center (UM-HMRC). To date, more than 1,600 employers from 21 U.S. industry sectors have submitted more than 30,000 standardized data sets, including industry-level detail and demographic data, for benefit program benchmarking and analysis. The development of EMPAQ standardized metrics has helped employers bring data to life and served as an industry-wide tool for change in how benefit programs are designed, delivered and measured.</p>	EBSCO	
Cross-sector alliances for large-scale health leadership development in Canada: Lessons for leaders	Monique Cikaliuk	Journals	2011	Leadership in Health Services		24	4	-	<p>Purpose – This paper aims to examine the benefits and challenges of enacting cross-sector alliances as a strategy to meet the health leadership capacity and capability requirements to effect improvements in health service delivery.</p> <p>Design/methodology/approach – The findings originate from two case studies of cross-sector alliances in Canada.</p> <p>Findings – Value generated by strategic alliances in health with organisations from public, private and civil sectors is accrued at the inter-organisational, organisational, group and individual level. Obstacles related to mindsets, operations and governance guiding the partnerships were identified which further an understanding of the advantages and constraints for using cross-sector alliances as a strategy for large-scale health leadership development.</p> <p>Research limitations/implications – Future research could investigate whether other factors influence the overall success of using an alliance strategy which may lead to a more comprehensive understanding of large-scale health leadership initiatives. Given the universal health care context of this study, the results should be examined for their generalisability to other contexts.</p> <p>Practical implications – The results urge decision-makers to develop the mental models, behaviours and processes that support the use of cross-sector alliances to achieve practical benefits gained through large-systems health leadership development that may otherwise be unattainable.</p> <p>Originality/value – This paper responds to the needs of executives by investigating alliances among health, education, business and government as a strategic driver for building the health leadership capacity and capability needed for implementing health reform.</p>	Emerald

Current challenges of personal health information management	Janne Lahtiranta	Journals	2009	Journal of Systems and Information Technology		11	3	Studienziel Purpose – Health care has come to a turning point. Particularly due to aging societies and economic pressure placed on health care system, health is rapidly becoming one's own responsibility. This fundamental paradigm shift does not only affect the way health care services that will be provided in the near future but it also places enormous health information management demands on the laypeople. The purpose of this paper is to look into this emerging phenomenon, its current challenges and available solutions. Design/methodology/approach – In order to identify different kinds of solutions used for personal health information management (PHIM) and related challenges, a bibliographical review is conducted using five online databases. The review focuses on articles that emphasize personal nature of the health information management. The bibliographical review is also extended to some of the articles cited in the original review. To support discoveries from the bibliographical review, the results are compared to free electronic personal health records of different types. Findings – The paper identifies some of the most current challenges in the field of PHIM and provides an outline for overcoming them. Proposed guidelines include a concept of citizen pathways (CPs) that can be used for complementing the currently available solutions from a citizen-centric perspective. Research limitations/implications – The paper points out near-future development directions for the PHIM solutions in the form of identified and relevant challenges and characterized CPs. However, the forward-looking conclusions are based on a bibliographical review and analysis of existing systems, and therefore their functionality and applicability are not tested in practice. Originality/value – The findings of this paper can be used in shaping PHIM solutions of the near future. The described challenges can also be used to identify potential problems of the internet and new media on a larger scale in the context of health and medical informatics.	Emerald	
Current health of quality management practices in service sector SME: A case study of Pakistan	Nadeem Kureshi, Faheem Quereshi, Ali Sajid	Journals	2010	The TQM Journal	22		3	Studienziel Purpose – The purpose of this paper is to assess the current quality management practices of service sector SMEs in Pakistan, and to provide an insight for policy development for SMEs. Design/methodology/approach – A focused investigation of 100 SMEs in northern Pakistan was conducted through focused interviews and e-mail survey. The survey is based on a list of 19 quality management techniques selected through Delphi research. Findings – A significant gap is reported between the knowledge of quality management techniques and their usage by SME entrepreneurs. The results show strong usage of CRM related techniques while low usage of suppliers' development related and statistically extensive techniques. Significant correlation is found between the usage of TQM and other quality management techniques, particularly six sigma and 5S. Practical implications – The results offer insight into quality management practices in Pakistani SMEs which represent the broader South Asian business culture that is host to a huge share of outsourcing from developed economies. Besides being of huge value to policy makers in the country, the results are useful for firms in developed economies that outsource their businesses to developing economies in South Asia. Originality/value – The paper provides an insight into the quality management practices of Pakistani SMEs.	Emerald	
Das Curriculum Klinische Psychologie / Gesundheits-psychologie	Ulrike Kipman	Literatur-nachweis	2006	Psychologie in Österreich	26		6	Studienziel Um den psychologischen Beruf in Oesterreich selbstaendig im Bereich des Gesundheitswesens ausueben zu koennen, ist nach der Absolvierung des Studiums der Psychologie unter anderem die Ausbildung zum/zur Klinischen Psychologen/Psychologin und/oder zum/zur Gesundheitspsychologen/Gesundheitspsychologin Voraussetzung. Die theoretisch-fachliche Kompetenz kann im Rahmen des Curriculums zum/zur Klinischen Psychologin in der Fortbildungsakademie des Berufsverbandes der oesterreichischen Psychologen absolviert werden. Es wird ein Rueckblick auf die Erfahrungen, die im Rahmen dieser Ausbildung gemacht wurden, gegeben, und Aenderungsvorschlaege werden gemacht.	WISO	
Das organisationale Gestaltungsfeld Führung	Jochen Gurt	Literatur-nachweis	2010	Universität Bochum			-	Eine kumulative Dissertation zum Thema "Effekte und vermittelnde Mechanismen struktureller, personaler und domain-spezifischer Fuehrung auf die organisationalen Erfolgsparameter Dienstleistungsorientierung und Mitarbeitergesundheit" wird vorgelegt. Nach einer Einfuehrung in die theoretischen Grundlagen und die empirische Evidenzlage zur Wirksamkeit personaler und struktureller Fuehrung werden die folgenden Originalpublikationen abgedruckt: (1) Gurt, J., Elke, G. und Zimolong, B.: Dienstleistungsmanagement: Erfolgsfaktoren Servicekultur und Commitment. (2) Schwennen, C., Gurt, J. und Elke, G.: Building up resources to counter workplace stressors: The 5x1 approach. (3) Schwennen, C. und Elke, G.: Health-specific leadership - does leaders' explicit engagement for employee health impact employee strain levels? In einem abschliessenden Kapitel werden die Ergebnisse dieser Studien zusammenfassend diskutiert, und weitere Forschungsperspektiven werden aufgezeigt.	WISO	
Data flow analysis of plant and equipment health and safety management	Zainab Riaz, David J. Edwards, Gary D. Holt, Tony Thorpe	Journals	2011	Journal of Engineering, Design and Technology			9	2	Studienziel Purpose – Construction plant and equipment accident statistics suggest constant re-evaluation of health and safety (H&S) systems is beneficial. This paper aims to process analyse plant and equipment H&S management systems on UK construction sites, with a view to applying information and communication technology (ICT) to them as an improvement mechanism. Design/methodology/approach – Five construction project case studies drawn from members of the former Major Contractors Group yield rich H&S process data. These are analysed using data flow diagram (DFD) techniques, to evaluate processes and proffer system improvements incorporating ICT. Findings – Causes of unsafe practice regarding management of construction plant and equipment are found to include: aspects of the plant itself, management processes and operator competence. A new ICT "process paradigm" is suggested, the architecture of which incorporates mobile computing, automatic identification and data collection and a management information system. Research limitations/implications – Findings contribute particularly to the fields of plant and equipment; and managing H&S. Practical implications – Suggested ICT direction might form the basis of commercial interest in developing an all-embracing H&S control mechanism for plant and equipment operations. Originality/value – Application of DFD analysis in this setting is quite new.	Emerald
Datamonitor: Health management Associates, Inc.			2011	Health Management Associates SWOT Analysis				Studienziel A company profile of Health Management Associates, Inc., a premier operator of acute care hospitals primarily in the southeast and southwest areas of non-urban U.S., is presented. An overview of the company is given, along with key facts including contact information, number of employees and revenues. A SWOT analysis is provided which includes strengths, weaknesses, opportunities for improvement and threats to the business. Key facts of the company include head office address, Web address, phone number, fax number, revenue statistics and financial year end data.	EBSCO

Datamonitor: Health management Associates, Inc.			2009	Health Management Associates SWOT Analysis				Studienziel A company profile of Health Management Associates Inc., which operates general acute-care hospitals in non-urban communities, is presented. An overview of the company is given, along with key facts including contact information, number of employees and revenues. A SWOT analysis is provided which includes strengths, weaknesses, opportunities for improvement and threats.	EBSCO	
Decision-making process and health management councils: theoretical approaches	A Wendhausen, M Cardoso Sde	Journals	2007	Rev Bras Enferm	60		5	Studienziel With the institutionalization of participation in health, through conferences and management councils at national, state, municipal and local levels, a process of democratization is initiated in the health area. However, in relation to the health councils in particular, there is still much to be done, including improving the quality of the decision-making process. This work aims to place the decision-making process in its theoretical context in terms of participatory democracy, elements which make up, factors which influence its development, and finally, to explore some possibilities of this theoretical basis to analyze the practices of the health councils in the area of health. It is hoped that it will make a theoretical contribution to the analyses carried out in this area, in order to provide a decision-making process that is more inclusive in terms of participation. Demographic changes and health management	R Calero Jdel	Journals	2006	An R Acad Nac Med	123		1	keine Organisation Since our Constitution declaration in 1978 and General Law for Health in 1986, to date, the Spanish society has undergone marked social changes. Socio-economic and health indicators in Spain have also improved as to an increased life expectancy, important reduction in infant mortality, and favourable changes reported in the national Health Survey. Risk factors influence the main causes of death, thus it is said that "man does not die but it kills himself". Healthy health practices are specified, and there is empirical evidence of greater disability-adjusted life years, a better adherence to Mediterranean diet, no smoking, moderate consumption of alcohol, enough time of sleeping, weight control, avoiding obesity and overweight, and increased physical activity, all the above practices achieving a healthier life. At a global scale in the world we live, famine has no frontiers, and fighting against this plague can not await longer. Overall, health and poverty are correlated and it must be overcome for reasons of human dignity, universal rights (even in ius gentium), and ethical dimension as normative of new socio-economic structures. Present must be transformed to recover hope in ou global world, still hungry, and in need of justice, enlightenment and solidarity.	PubMed	
Demonstrating impact of a national leadership training program for state health officials: Individual, organizational, and system-wide factors influencing program	SA Sarpy	Artikel	2013	141st APHA Annual Meeting				Studienziel To date, relatively few studies have evaluated the effects of public health leadership programs on workforce development. The present evaluation process was designed to provide both quantitative and qualitative evidence of the extent to which the State Health Leadership Initiative (SHLI), developed and presented by the Association of State and Territorial Health Officials (ASTHO), positively impacts the training-related knowledge and behaviors of participating new State Health Officials (SHOs). The SHLI program was developed to accelerate the leadership capacity development of new state and territorial health officials as policy makers, administrators, and advocates for the health of the public. The present evaluation assesses the effectiveness of the SHLI in meeting its goals in equipping new state and territorial health officials with the skills needed to lead their public health agency and advise the Governor on public health, thereby, taking on a more active role in policy-making at the state level. In better understanding program impact, it is also vital to identify and examine various individual, organizational, and system-wide factors that influence program effectiveness. In this way, the evaluation measures the success of the SHLI program in meeting its specific objectives as well as assesses the extent to which the extra-training factors (e.g., individual characteristics, organizational barrier and facilitators) influence program effectiveness. The information can be used to not only refine major program components as needed, but also the evaluation can be used to systematically address related issues such as potential program reach. Collectively, the evaluation process can be used to ensure continuous improvement and program excellence of the SHLI and related leadership training programs designed for the public health workforce. Demoralization in mental health organizations: leadership and social support help	S Gabel	Journals	2011	Psychiatr Q	83		4	Studien-teilnehmer Demoralization is a commonly observed feeling state that is characterized by a sense of loss of or threat to one's personal values or goals and a perceived inability to overcome obstacles toward achieving these goals. Demoralization has features in common with burnout and may precede or accompany it. Psychiatrists working in many mental health care organizational settings, be they in the public or private sectors, may be at particular risk for demoralization. This is due partly to stressors that threaten their own professional values because of factors such as programmatic cut backs, budgetary reductions and changing social emphases on the value of mental health treatments. They also may be at risk for demoralization because of the effects on them of the governance styles of the agencies in which they are employed. The leadership or governance style in large organizational settings often is authoritarian, hierarchical and bureaucratic, approaches that are antithetical to the more participative leadership styles favored by many mental health professionals in their clinical activities. Clinical leaders in mental health organizations must exhibit various competencies to successfully address demoralization in clinical staff and to provide a counterbalance to the effects of the governance style of many agencies in which they are employed. Appropriate leadership skills, sometimes too simplistically termed "social support", have been found to reduce burnout in various populations and are likely to lessen demoralization as well. This paper reviews these important leadership issues and the relationship of social support to recognized leadership competencies.	PubMed

Determining proper strategies for health, safety, security and environmental (HSSE) management system	Mojgan Zaeidar, Parvin Nasiri, Mohammadhoseyn Tghdisi, Majid Abbaspour, Reza Arjmandi, Omid	Journals	2013	Work	45	3	Studienziel	Today, managing an organization is concerned with many problems. Adopting proper strategies can promote an organization's survival. This study aimed at developing an appropriate HSSE Strategy for regional operation associated companies of Iran National Gas Company (INGS) using SWOT analysis. The analysis of the strengths, weaknesses, opportunities, and threats of HSSE was carried out and according to the results suitable strategies were recommended. In this regard, senior and junior managers, supervisors, and experts active in regional operation associated companies of Iran National Gas Company participated in SWOT analysis from HSSE angle. Then, they selected the most applicable SWOT factors pertaining to the organization. In the next step, these factors were weighted and scored. Based on the results four categories of strategies were developed including SO, WO, ST, and WT. Further examination showed that SO Strategies were the most applicable for the organization.	EBSCO

Developing positive leadership in health and human services	EA Shannon, P Van Dam	Artikel	2013	Journal of Industrial Psychology			Studienziel	Orientation: Measuring the target outcomes of leadership development programmes provides evidence for the effectiveness of these interventions and the validity of their theoretical underpinnings. Research purpose: The aim of this study was to determine whether staff from the Tasmanian Department of Health and Human Services (Australia) experienced increased levels of self-efficacy, social support within the workplace and positive affect, following participation in a leadership development programme. Research design, approach and method: Quantitative and qualitative methods were used, allowing for triangulation of results. The General Self-Efficacy Scale and the Berlin Social-Support Scale (perceived available support, instrumental) were applied in an online survey administered before and nine months following the programme. Participant satisfaction surveys captured immediate responses and semi-structured interviews captured longer-term reflections. Main findings: Descriptive statistics indicated a moderate overall increase in self-efficacy, with strong increases in resilience, dealing with opposition, resourcefulness and problem solving. There was some evidence of greater overall social support and a strong increase in the development of social support networks. There was no support for an increase in participants' positive orientation towards their jobs in the quantitative data. The impact of adverse environmental factors on participants' perceptions also became evident through the interviews. Practical implications: Leadership development programmes that strengthen positive psychological resources provide participants with confidence and resilience in times of change. Organisations benefit from increased levels of employee self-efficacy as engagement and problem-solving abilities are enhanced. Contribution/value-add: These results contribute to the body of knowledge associated with effective leadership development.	Google Scholar
Development of measures of individual leadership for health promotion	Donna Anderson, Ronald C. Plotnikoff, Kim Raine, Linda Barrett	Journals	2005	Leadership in Health Services		18	2 Studienziel	Purpose – This purpose of this research was to develop and establish psychometric properties of scales measuring individual leadership for health promotion. Design/methodology/approach – Scales to measure leadership in health promotion were drafted based on capacity assessment instruments developed by other provinces involved in the Canadian Heart Health Initiative (CHHI), and on the literature. Content validity was established through a series of focus groups and expert opinion appraisals and pilot testing. Psychometric analyses provided empirical evidence of the construct validity and reliability of the leadership scales in the baseline survey (n=144) of the Alberta Heart Health Project. Findings – Principal component analysis verified the construct of the leadership scales of personal work-related practices and satisfaction with work-related practices. Each of the theoretically a priori determined scales factored into two scales each for a total of four final scales. Scale alpha coefficients (Cronbach's alpha) ranged between 0.71 and 0.78, thus establishing good scale internal consistencies. Research limitations/implications – Limitations include the relatively small sample size used in determining psychometric properties. In addition, further qualitative work would enhance understanding of the complexity of leadership in health organizations. These measures can be used by both researchers and practitioners for the assessment leadership for health promotion and to tailor interventions to increase leadership for health promotion in health organizations. Originality/value – Establishing the psychometric properties and quality of leadership measures is an innovative step toward achieving capacity assessment instruments which facilitate evaluation of key relationships in developing health sector capacity for health promotion.	Emerald
Development of measures of organizational leadership for health promotion	L Barrett, RC Plotnikoff, K Raine, D Anderson	Journals	2005	Health Educ Behav	32	2	-	This study describes the development and psychometric evaluation of four scales measuring leadership for health promotion at an organizational level in the baseline survey (n=144) of the Alberta Heart Health Project. Content validity was established through a series of focus groups and expert opinion appraisals, pilot testing of a draft based on capacity assessment instruments developed by other provinces involved in the Canadian Heart Health Initiative, and the literature. Psychometric analyses provided empirical evidence of the construct validity and reliability of the organizational leadership scales. Principal component analysis verified the unidimensionality of the leadership scales of (a) Practices for Organizational Learning, (b) Wellness Planning, (c) Workplace Climate, and (d) Organization Member Development. Scale alpha coefficients ranged between .79 and .91 thus establishing good to high scale internal consistencies. These measures can be used by both researchers and practitioners for the assessment of organizational leadership for health promotion and heart health promotion.	PubMed
Development strategy of health management	Zarko Pavic	Journals	2011	Singidunum Scientific Review	8	1	keine Organisation	Our development strategy of the health management education in Serbia contains two interactive functions: Health Management Education System (HMES) and Health Policy Development Program (HPDP). We prepared the original undergraduate, graduate and doctoral degree proposal in the field of the health management with the three muster- (Health Policy, Health Care Payment Systems and Quality Improvement Models in Health Care) and two PhD topics (Health Policy, Health Economy). Development strategy of the HMES contains of the objectives in the area of education, medical science and technology, improvement of the organization and status of the medical profession, organization and functioning of the public health and enhancement of the ethical and bioethical principles of the medical profession. HMES is a specific education subsystem within public health sector which serves to accomplish the collaboration between health professionals and community, as well as doctors and patients. Advancement of professional collaboration, formation of teams, managerial network and research activities represent the basic components of systemic approach to work of the Department for health management. Personalization of the health management profession in health care system and leadership of the health managers in the decision making processes are basic goals of the HPDP. Key point factors of our action plan monitoring are the time, human resources, material resources and expenses required for realization of HMES and HPDP. The implementation of this strategy implies the control and evaluation of success of accomplished goals and development guidelines. To overcome the problems the following actions are needed: to design more effective and transparent health systems, to adjust the new standards and norms, to implement new technologies, to build a health management expert network for support of strategy, to improve the effectiveness of communication, to institute the rational access to resources and to define the better system of stimulation. Fundamental mission of the HMES and HPDP in preserving the dignity of medical profession may be completed only through management of the long-term visions of the common European health care system development strategy with clear political and financial support, legality of procedure and socio-cultural consensus. Diagnose gesundheitsförderlicher Führung: das Instrument "health-oriented leadership"	Franziska Franke, Jörg Felfe	Literatur-nachweis	2011	Führung und Gesundheit			-	Das Instrument "Health-oriented Leadership" (HoL) zur Erfassung gesundheitsförderlicher Führung wird vorgestellt. HoL wurde als praxisorientiertes, branchenunspezifisches Instrument entwickelt. Durch die Erfassung konkreter gesundheitsbezogener Einstellungen und Verhaltensweisen ermöglicht es die Ableitung spezifischer Handlungsempfehlungen. Dabei werden nicht nur die Interaktion mit Mitarbeitern und die Gestaltung gesundheitsförderlicher Arbeitsbedingungen mit einbezogen, sondern auch die bislang kaum berücksichtigte Vorbildwirkung der Führungskraft. Der Umgang der Führungskraft mit der eigenen Gesundheit und mit der Gesundheit der Mitarbeiter wird im Zusammenhang betrachtet. Durch Ergebnisse einer Längsschnittstudie mit 533 Mitarbeitern und Führungskräften wird dieser Zusammenhang bestätigt und gezeigt, dass gesundheitsorientierte Führungskräfte einen positiven Einfluss auf die Gesundheit ihrer Mitarbeiter haben. Diagnosing the strategic health of an organization from SWOT analysis results: case study of the Australasian cost management profession	Jasper Mbachu, Marcel Frei	Journals	2011	Construction Management & Economics	29	3	Studienziel	To achieve strategic goals and success in the long term, every organization needs to be in a good state of health. It is argued that the strategic health of an organization depends on how the key strengths are leveraged to exploit prime opportunities, while at the same time, minimize exposure of the critical weaknesses to the serious threats in the external environment. Based on a SWOT analysis (strengths, weaknesses, opportunities and threats), the Strategic Health Index (SHI) was developed as a conceptual tool for diagnosing the strategic health of an organization. Application of the developed model was demonstrated in the assessment of the strategic health status of the Australasian cost management profession using analysed feedback from a convenience sample of 15 senior cost managers in Australia and New Zealand. Results show that expertise in procurement and cost consultancy was the key strength most leveraged to exploit identified opportunities, while lack of flexibility and versatility of service was the key weakness exposing the profession the most to the identified threats. Based on the SHI values, the overall strategic health of the cost management profession was diagnosed to be positive, in spite of its key weaknesses and threats. While these results specifically relate to cost managers, application of the model is highly recommended for use by business managers and others interested in assessing the long-term health and survival of their organizations. Die Schnittstellen sind noch nicht kompatibel: Konflikte am Arbeitsplatz im Spannungsfeld. .	Bernd Schneider	Literatur-nachweis	2004				Studienziel	Die effektive Bewaeltigung mobbingbedingter Problemstellungen wird unter dem Aspekt der Schnittstellenproblematik zwischen dem Gesundheitsmanagement in Betrieben und der Rehabilitation als berufsbezogenem Teil des Gesundheitswesens diskutiert. Dabei wird vorausgesetzt, dass Mobbingbeteiligte in einer psychosomatisch orientierten Rehabilitation behandelt werden und durch diese Behandlung eine erfolgreiche Reintegration ins Arbeitsleben angestrebt wird. Es wird betont, dass die bisherige Gestaltung der Schnittstellen ausbaufaehige Elemente enthaelt, die aber der Optimierung beduerfen. Vorschlaege hierzu werden aus der Gegeneueberstellung der Zielsetzungen, Leitbilder und Strukturen der beiden Systeme abgeleitet.	WISO
Division 8: Health Psychology		Journals	2004	Applied Psychology: An International Review	53		Studiendesign	The article presents information on topics and issues related to health psychology. In June and July 2004 two new health psychology books were published. "Health Psychology in Practice," edited by Susan Michie. The book comprises essential issues for professional training in this field. The authors deal with training models, interventions, consultancy, training in health psychology, teaching and professional practice problems. "Health Psychology," edited by Ad Kaptein. The book is a comprehensive introductory textbook for students, including valuable materials in teaching health psychology, dealing with major issues in the theories and research. Coping, social support, health behaviors and illness cognitions are discussed. It also reports that the 24th Conference of Stress and Anxiety Research Society took place in Amsterdam, Netherlands, on July 8-10, 2004. Presidents of IAAP Division 8, Ralf Schwarzer and Esther Greenglass presented several papers and contributed to roundtable discussions.	EBSCO
DIWA-IT - ein massgeschneidertes Projekt im Rahmen des strategischen Gesundheitsmanagements	Natalie Lotzmann, Margret Klein-Magar	Literatur-nachweis	2011				Studienziel	Es wird informiert ueber eine Gesundheitsmanagementprojekt, das im Informationstechnologieunternehmen SAP durchgefuehrt wurde. Ziel war es, die bereits intern vorliegenden Daten und Erkenntnisse zur Krankheits- und Gesundheitssituation der Mitarbeiter durch Analysen externer Partner anzureichern, zusaetzliche externe Perspektiven und damit weitere Erkenntnisse ueber das Gesundheitsverhalten und die Ressourcen der Mitarbeiter zu erhalten. "Good Practices" des Unternehmens sollten im Rahmen der Analysephase des Projekts identifiziert und weiter gestaerkt werden. Daraus hinaus sollten gemeinsam innovative Ansaeztze zur Gesundheitsfoerderung entwickelt und erprobt werden. Von Beginn an wurde das Projekt in enger und partnerschaftlicher Kooperation zwischen Health Management, Arbeitnehmervertretern und Geschäftsbereichen von SAP ausgefuehrt. Bevor das Vorgehen und Ergebnisse des Projekts dargestellt werden, wird ein kurzes Unternehmensprofil vorangestellt. Bei der Projektbeschreibung wird eingegangen auf (1) die Ausgangssituation, (2) Entwicklungsmassnahmen im Bereich der Teams und der Fuehrungskraefte, (3) Rollen in der Beratung.	WISO
Do employee health management programs work?	S Serxner, D Gold, A Meraz, A Gray	Journals	2009	American Journal of Health ...	23	4	Studiendesign	This article identifies the methodological challenges associated with determination of economic return for employee health management programmes and summarizes the findings from 23 articles that included 120 peer review study results. It identifies the average return-on-investment and percent health plan cost impact to be expected for health promotion and disease management programmes, the expected time period for its occurrence, and caveats related to its measurement. Effect of Occupational Health and Safety Management System on Work-Related Accident Rate and Differences of Occupational Health and Safety Management	SJ Yoon, HK Lin, G Chen, S Yi, J Choi, Z Rui	Artikel	2013	Safety and Health at Work			Studienziel	Background The study was conducted to investigate the current status of the occupational health and safety management system (OHSMS) in the construction industry and the effect of OHSMS on accident rates. Differences of awareness levels on safety issues among site general managers and occupational health and safety (OHS) managers are identified through surveys. Methods The accident rates for the OHSMS-certified construction companies from 2006 to 2011, when the construction OHSMS became widely available, were analyzed to understand the effect of OHSMS on the work-related injury rates in the construction industry. The Korea Occupational Safety and Health Agency 18001 is the certification to these companies performing OHSMS in South Korea. The questionnaire was created to analyze the differences of OHSMS awareness between site general managers and OHS managers of construction companies. Results The implementation of OHSMS among the top 100 construction companies in South Korea shows that the accident rate decreased by 67% and the fatal accident rate decreased by 10.3% during the period from 2006 to 2011. The survey in this study shows different OHSMS awareness levels between site general managers and OHS managers. The differences were motivation for developing OHSMS, external support needed for implementing OHSMS, problems and effectiveness of implementing OHSMS. Conclusion Both work-related accident and fatal accident rates were found to be significantly reduced by implementing OHSMS in this study. The differences of OHSMS awareness between site general managers and OHS managers were identified through a survey. The effect of these differences on safety and other benefits warrants further research with proper data collection.	Google Scholar
Effective Safety and Health Policy for Improved Performance of Organizations in Africa	Emmanuel I. Akpan	Journals	2011	International Journal of Business & Management	6	3	-	Improving performance in organization may be demonstrated by way of intensifying effort towards increasing output level and quality. To accomplish this goal means efforts of employees are required in task performance. Effective execution of such essential employee responsibility, to a great extent, depends on the level of safety in the workplace. Management policy, especially in the developing economies is yet to properly address the issue of employee health and safety. This has resulted in frequent accidents and hazards, leading to high costs in the areas of hospital bills, salaries for hospitalized workers and compensations. Increased labor turnover, absenteeism, strained management-labor relationships, operational inefficiency, and ultimately decreasing performance become noticeable in such organizations. To satisfy workers' safety needs and motivate them, ceteris paribus, management must maintain effective health and safety program, and be committed to its success in all ramifications.	EBSCO
Effects of Resource-Building Group Intervention on Career Management and Mental Health in Work Organizations: Randomized Controlled Field Trial	Jukka Vuori, Salla Toppinen-Tanner, Pertti Mutanen	Journals	2012	Journal of Applied Psychology	97	2	Studienziel	A resource-building group intervention was developed to enhance career management, mental health, and job retention in work organizations. The in-company training program provided employees with better preparedness to manage their own careers. The program activities were universally implemented using an organization-level, 2-trainer model with trainers from the human resources management and occupational health services. The study was a within-organizations, randomly assigned field experimental study; it investigated the impacts of the intervention on immediate career management preparedness and later mental health and intentions to retire early. A total of 718 eligible individuals returned a questionnaire in 17 organizations and became voluntary participants. The respondents were randomly assigned to either an intervention (N = 369) or a comparison group (N = 349). Those in the intervention group were invited to group intervention workshops, whereas those in the comparison group received printed information about career and health-related issues. The 7-month follow-up results showed that the program significantly decreased depressive symptoms and intentions to retire early and increased mental resources among the group participants compared to the others. The mediation analyses demonstrated that the increase in career management preparedness as a proximal impact of the intervention mediated the longer term mental health effects. Those who benefited most from the intervention as regards their mental health were employees with elevated levels of depression or exhaustion and younger employees, implying additional benefits of a more targeted use of the intervention. The results demonstrated the benefits of the enhancement of individual-level career management and resilience resources as career and health promotion practice in work organizations.	EBSCO
e-Health: Towards a new health management agenda?	Paulo Moreira	Journals	2012	International Journal of Healthcare Management	5	2	Studienziel	The author reflects on the development of e-Health infrastructures for the health care management in European Union. The author mentions the practical health management improvements including health cards, electronic patient records, and electronic prescriptions. The author discusses the immense potential claim of e-Health which must be added to healthcare management. Moreover, he tackles the support of the journal to the promotion of e-Health.	EBSCO
Eine Gesundheits-psychologie für Leib und Seele	Günter Zurhorst	Literatur-nachweis	2004				Studienziel	Es wird die These vertreten, dass die Gesundheits-psychologie ein neues Subjektmodell benoetigt, das die Verschraenkung von Koerperlichem, Psychischem und Sozialem in ihrem synchronen wie diachronen Geschehen angemessen konzeptualisiert und damit einem humanwissenschaftlichen Anspruch tendenziell besser gerecht wird. Zuerst werden einige Probleme des herkoemmnlichen Gesundheitsbegriffs sichtbar gemacht. Dabei wird der von Hurrelmann vertretene Gesundheitsbegriff herangezogen und hinsichtlich bestimmter Aspekte (Gesundheit als Kontinuum, als Bewaeltigung, als Gleichgewicht) eroertert. Dann wird der Zusammenhang zwischen koerperlichen, psychischen und sozialen Prozessen thematisiert, und unter Rekurs auf das Konzept des "leiblichen Selbst" von B. Waldenfels wird betont, dass leiblich existieren immer beides heisst: Leibsein und Leibhaben. Grundlinien eines phaenomenologisch-subjektwissenschaftlichen Gesundheitskonzepts werden skizziert.	WISO

Einführung Gesundheits-psychologie	Nina Knoll, Urte Scholz, Nina Rieckmann	Literatur-nachweis	2011				Studienziel	In der vorliegenden Einfuehrung wird ueber gesundheitspsychologische Theorien, Modell und Forschungsergebnisse informiert. Die Gesundheits-psychologie befasst sich mit dem Erleben und Verhalten angesichts gesundheitlicher Risiken und Beeintraechtigungen und mit der Optimierung von Gesundheit im Sinn von Fitness oder Wellness. Sie wird von biopsychosozialen Modellvorstellungen geleitet. Der erste Teil des Bandes beschaeftigt sich mit den Pfaden, ueber die Erleben und Verhalten mit koeerperlichen Zusammenhaengen verbunden sind: gesundheitsrelevantes Verhalten und Stress. Die wichtigsten Theorien werden dargestellt: Zunaechst werden Determinanten gesundheitsrelevanten Verhaltens anhand unterschiedlicher Modelle erlaeuert. Anschliessend wird auf Stress- und Bewaeltigungstheorien sowie Persoenlichkeitseigenschaften und Person-Umwelt-Konstellationen, die zu besonders viel oder besonders wenig Stress disponieren, eingegangen. Es wird beschrieben, wie andere Menschen direkt oder indirekt auf Stress und Risikoverhalten Einfluss nehmen und auf welchen Wegen Stress die physiologischen Reaktionen aus dem Gleichgewicht bringt. Im zweiten Teil werden empirische Befunde zu den im ersten Teil dargestellten Theorien praesentiert, und zwar im Rahmen der Forschung zu den beiden Haupttodesursachen der westlichen Industrienationen: Herz-Kreislauf-Erkrankungen und Krebs. Abschliessend wird umrissen, wie sich die Erkenntnisse gesundheitspsychologischer Theorien in Programme zur Gesundheitsfoerderung umsetzen lassen. Gesundheitsprogramme werden kritisch unter die Lupe genommen. Das Lehrbuch enthaelt Orientierungshilfen wie Stichpunkte und Piktogramme sowie Kapitelzusammenfassungen und Wiederholungsfragen.	WISO

Emergencing: Discovering the tacit dimension of global health leadership	M Warungi	Artikel	2011	The Journal of Global Health Care Systems			Studienziel	This study addressed the problem of leadership effectiveness in the practice of global health using a qualitative method with an emerging grounded theory design. A paradoxical increase in the incidence of diseases and poverty in sub-Saharan Africa exists at a time when there is increasing investment for fighting the diseases and poverty. Failure to acknowledge tacit knowledge leads to the emergence of unintended consequences and ultimate failure of projects, creating a relevance paradox. The underlying systems archetypes of failure to acknowledge the tacit dimension include fixes-that-fail and shifting-the-burden. Processual integrity emerged as the positive central phenomenon that allowed the emergence of relevant knowledge from a group of diverse stakeholders. Knowledge alienation emerged as the negative central phenomenon inhibiting the emergence of knowledge from a group of diverse stakeholders. Emergencing is the theoretical model of bringing forth relevant knowledge from a group of stakeholders.	Google Scholar

Employability through health? Partnership-based governance and the delivery of Pathways to Work condition management services	Colin Lindsay, Matthew Dutton	Journals	2010	Policy Studies	31	2	keine Organisation	The Pathways to Work (PtW) initiative has been rolled out in 49 Jobcentre Plus districts across Great Britain as the government seeks to provide services to activate claimants of incapacity benefits and help them overcome health-related barriers to work. The recent expansion of PtW has seen a heavy reliance on the contracting-out of services to the private and third sectors, with 'Lead Providers' paid according to job outcomes achieved for clients. However, during the initial development of PtW, the initiative was defined by a flexible, partnership-based form of governance, with a key role for the public National Health Service (NHS) in the delivery of health 'condition management' services. This approach has been retained in a minority of Jobcentre Plus Districts. Based upon a review of previous evaluation evidence and more than 50 in-depth interviews with NHS staff and managers, this article critically assesses this partnership-based governance model and the potential added value flowing from the involvement of the NHS and its professional clinicians in the delivery of condition management services. The article concludes by identifying lessons for the continuing development of governance and delivery mechanisms for condition management under the PtW regime and future employability/health interventions. Entsolidarisierung von Führungsverhalten und mögliche Auswirkungen auf die Gesundheit	Harald Stummer	Journals	2007	Industrielle Beziehungen	14	3	Studiendesign	In Helt 3/2005 von „Industrielle Beziehungen“ diskutieren Auer-Rizzi et al. (2005) Symptome der Entsolidarisierung von Governance-Strukturen und Führungsverhalten in Deutschland und Österreich. Neben den dort vermuteten Entwicklungen, wie Abnahme der Partizipation, Abnahme der Identifikation etc., zeigt ihre Diskussion eine verblüffende Ähnlichkeit mit gesundheitswissenschaftlichen Langzeitstudien, etwa mit der so genannten Roseto Story. Im folgenden Beitrag wird die mögliche Beziehung zwischen entsolidarisierten Machtstrukturen und der Gesundheit untersucht. Obwohl immer mehr Unternehmen in Gesundheitsmanagementsysteme investieren, ist ein sich verschlechternder Gesundheitszustand zu erwarten, insbesondere dann, wenn sich die Entwicklung in Richtung Egoismus, autokratischem Führungsverhalten und abnehmender sozialer Kompetenz der Führungskräfte fortsetzt. Erfolgsfaktor Internationalisierung: Eine empirische Analyse der Breite und Geschwindigkeit der ...	Marc Fischer, Michel Clement	Fachzeitschri ft	2007	zbf Schmalenfachs Zeit für betriebswirts. Forschung			Studienziel	Ogbleich international tätige Unternehmen in der globalen Ökonomie allgegenwärtig sind, lassen sich in der theoretischen und empirischen betriebswirtschaftlichen Forschung nur wenige Beiträge finden, die die Vor- und Nachteile internationaler Markteintrittsstrategien empirisch untersuchen. Dieser Aufsatz zeigt, wie (1) die Breite der Internationalisierung und (2) die Geschwindigkeit des internationalen Markteintritts direkt und moderierend den Marktanteil neuer Produkte in der pharmazeutischen Industrie beeinflussen. Die Ergebnisse deuten darauf hin, dass Manager, die ihre Neuprodukte bereits in mehrere große internationale Märkte eingeführt haben, einen höheren Marktanteil in den neuen Ländermärkten realisieren können. Erreicht wird dieser Effekt vor allem durch die Reduktion des Nachteils eines späten Markteintritts und durch eine höhere Wirkung des Marketings. Für Manager von Folgeprodukten bedeuten diese Erkenntnisse, dass eine sequenzielle Markteinführungsstrategie (Wasserfallstrategie) in große, bereits von Wettbewerbern erschlossene, internationale Märkte deutlich mehr Erfolgspotenzial bieten kann, als eine schnelle, parallele Markteinführung (Sprinklerstrategie). Evaluating a Safety & Health Management System	Bruce K. Lyon, Bruce D. Hollcroft	Journals	2006	Professional Safety	51	10	Studienziel	The article discusses the factors to be considered in evaluating a safety and health management system. Reviews of safety-and health-related documents is important to provide a thorough understanding of the current system and its recent implementation history. Corporate and local safety policy statements and procedures must be reviewed to determine their adequacy and applicability. The critical components of the safety and health management evaluation are interviewing with personnel at all levels. The difference between the employee and management perceptions of the safety and health management system must be aligned.	EBSCO
Evaluating health management programmes over time: application of propensity score-based weighting to longitudinal data	A Linden, JL Adams	Journals	2010	J Eval Clin Pract	16	1	Studienziel	Health management programmes are generally evaluated as point treatment studies in which only a baseline and outcome measurement are used in the analysis, even when multiple observations for each individual are available. By summarizing observations into two distinct measurements the evaluator loses any ability to discern patterns of change in the outcome variable over time in relation to the intervention. There are several statistical models available to evaluate longitudinal data that are typically regression-like in form and designed to adjust for clustering at the individual level. Most evaluators of longitudinal studies tend to adjust for the effect of time-dependent confounding by including these covariates as independent variables in the model. However, this standard adjustment approach is likely to provide biased estimates. In this paper we describe the application of the propensity score-based weighting technique to longitudinal data to estimate the effect of treatment on an outcome. This method reweights each treatment pattern to represent the entire population at each time point and provides an unbiased treatment effect. We illustrate the technique using data from a disease management programme and demonstrate its superiority over standard analytical adjustments in correcting for time-dependent confounding for each time period under study.	PubMed
Evaluation Betrieblichen Gesundheitsmanagements	Gerhard Westermayer, Jens Wellendorf	Literatur-nachweis	2007	Prävention	30	4	Studienziel	Es wird verdeutlicht, dass Betriebliches Gesundheitsmanagement (BGM), verstanden als systematische Erhoehung von in der Arbeit bzw. Arbeitssituation liegenden Gesundheitspotenzialen, als Organisationsentwicklung (OE) aufzufassen ist. Ein der OE angemessener Evaluationsansatz ist die den ganzen Prozess des BGM begleitende und steuernde Feststellung von Effektivitaet, Effizienz und Akzeptanz der Massnahmen. Diese Auffassung von Prozessevaluation wird erlaeuert. Gezeigt wird, wie ein Controlling-System installiert werden kann, das in der Lage ist, die vertretene Auffassung von Evaluation als Beratungsinstrument praktisch zu realisieren. Hierbei stehen die Ermittlung von wichtigen Einflussfaktoren auf die Gesundheit sowie die systematische Verknuepfung verschiedener Erfolgsindikatoren im Vordergrund. Die Gesellschaft fuer Betriebliche Gesundheitsfoerderung hat diese Evaluationspraxis vielfach vollzogen. Anhand eines Projektbeispiels werden Aspekte der beschriebenen Vorgehensweise illustriert. Expertise level of occupational health physician, implementation of occupational safety and health management system (OSHMS) and occupational safety and health activity level in Japan in the companies liested on Tokyo Stock Exchange first section	Y Ikeda, T Kameda, C Shirakawa, T Nagata, S Zama, K Kayashima, Y Kobayashi, K Mori	Journals	2007	J UOEH	29	4	keine Organisation	By enforcement of the revised Japanese Industrial Safety and Health Law on April, 2006, the implementation of OSHMS seems to be expanding and encouraged. In OSHMS of Japan, however, the occupational health aspects have not been put into operated, while only occupational safety aspects have been prioritized. To clarify the issues to deploy OSHMS with occupational health aspects, we conducted a mail survey of 1,581 companies listed on the Tokyo Stock Market First Section in December, 2004. The effective responses were 267 (16.9%). The number of companies which had installed OSHMS, those that planned to install OSHMS and those had no plan for OSHMS were 62 (23.2%), 82 (30.7%) and 123 (46.1%), respectively. Only 12 companies include the complete OH activities in the installed OSHMS. A significant relationship was observed among expertise of OH physicians, actual role and responsibility of OH physicians, installation of OSHMS and OH services quality level. To deploy OSHMS well-balanced for health and safety aspects in present Japan, it was suggested that the education regarding OH operation in OSHMS was necessary to the person in charge of OSHMS in each company, and the participation by OH physicians to operate OSHMS, especially OH physicians with expertise, was essential.	PubMed
Exploring the relationship between managers' leadership and their health	Daniel Lundqvist, Anna Fogelberg Eriksson, Kerstin Ekberg	Journals	2012	Work	42	3	Studienziel	Objective: To explore the relationship between managers' leadership and their health, by investigating what psychosocial conditions in the workplace managers experience as being important to their health, and how their health influences their leadership. Participants and methods: Semi-structured interviews with forty-two managers at different managerial levels in a large Swedish industrial production company. Results: Most managers felt their health was good, but many perceived their work as stressful. They said it was important to their health that they did a good job and achieved results as expected, that conditions in the workplace enabled this achievement, and that their performance was acknowledged. In comparison to the other managerial levels, the first-line managers' work and health were especially dependent on such enabling conditions. The results also showed that the managers' health influenced their leadership, the quality of their work and the quality of their relationship with subordinates. Conclusion: Managers' leadership, health and their work conditions are reciprocally related to each other. A productive and healthy workplace is facilitated by focusing on managers' conditions for leadership, their health and their work conditions.	EBSCO
Exploring the Spectrum of Labour Management Participation Within Safety Regimes: Occupational Health and Safety in Ontario (Canada), Sweden and the United States	Jason Lakhan	Journals	2007	International Journal of Comparative Labour Law & Industrial Relations	23	3	Studiendesign	The article discusses the emerging global importance of occupational health and safety standards and cites the existing standards in Canada, Sweden and U.S. A comparison of varying styles of implementation in the countries and its effects on labor-management relationship is presented. Details on the legislative history and governmental framework, legal responsibilities of workplace stakeholders and compliance mechanisms are also discussed.	EBSCO
Extensions and intensions of management control -- The inclusion of health	Mikael Holmgren Caicedo, Maria Mårtensson	Journals	2010	Critical Perspectives on Accounting	21	8	-	Interest in management control of intangibles has grown remarkably during the last decades and now includes managing employee health. Research in this field is so far in the early stages: few empirical studies have been undertaken and fewer studies take into consideration the implications of such systems. In this paper we wish to contribute to the field with a qualitative study of instances of management control of health in ten Swedish organizations. Many good intentions lie behind the idea of making health and ill-health a subject for management control and the expected results are very positive—lower sick-leave rates, reduction of costs and human suffering. Such intentions stand for an intension, i.e. the ideas, properties or state of affairs that are connoted by a word or symbol, in this case what can be connoted by the concept of management control of health, its conceptual position. An intension, however is not given insofar as a word or concept may be associated to more than one. Thus we set out to interpret management control of health in terms of two conceptual positions, modernism and postmodernism, in order to bring forth two very different intensions of management control of health: one where the practice is seen as an investment with a purpose to visualize ill-health and increase efficiency by putting in place measures to increase employee health; the other where the practice is seen as a means to make the individual accountable in order to be able to intensify control and colonize leisure. Fewer employees place high priority on health management		Periodical	2011	Benefits Selling	9	4	Studiendesign	Several charts and statistics related to employee health management are presented including the percentage of employees who are encouraged by employer programs to live a healthier lifestyle, decline in employee's focus on health and comparison of perspectives between those with poor health and those with very good health.	EBSCO
Financial leadership and health reform be careful what you ask for	Jeffrey C. Bauer	Periodical	2007	Healthcare Financial Management	61	8	keine Organisation	The article focuses on financial leadership and momentum for health care reform in the U.S. People assume that reform will happen after the 2008 presidential election because all parties seem to agree that everyone should have health insurance. Meanwhile, healthcare organization are supporting universal access, and they are forming coalitions and sponsoring activities to promote the goal of insurance coverage for all. On the other hand, employers are constrained by domestic and global competition, energy costs, and tight labor markets.	EBSCO
Finding common ground in the use of financial incentives for employee health management: a call for a progress-based approach	PE Terry, DR Anderson	Journals	2011	AM J Health Promot	26	1	Studiendesign	Commentary	PubMed
Fine-tune health management capabilities to prevent costly illnesses		Periodical	2007	Managing Benefits Plan	7	11	Studiendesign	The article reports on a services company that has instituted a wellness program and provided incentives to cut long term health-care costs in Middle West. A company controller states that they heavily promoted a health management initiative so that more employees would take advantage of a screening program to detect high blood pressure and other threats to good health. The controller adds that they connected payroll incentives with health management and health coaching programs.	EBSCO
Five Measures of Strengthening Employee Health Management	W Xiang-qian, Y Min-min	Artikel	2008	Journal of Shandong Administration			Studienziel	Employee health management should be included in enterprise human resources management system.An organization should carry on the all-directional management and service,aiming at the danger factors of the enterprise employee health.An origination should manage employee health from the following aspects: the first correctly understands the importance of health management;the second is establishing an effective management mechanism;the third is improving the control system,the fourth is carrying on the health education for employees,the last is implementing on the all-directional management. Follow the leader. Health system executives share the leadership advice that propelled their careers and helped utsain their successes	R Weiss	Journals	2012	Mark Health Serv	32	3	Studiendesign	The article offers suggestions of several health system executive including Megan Manahan, a vice president at Catholic Health Partners, Jean Hitchcock, a corporate vice president at MedStar Health and Steve Shivinsky, a corporate vice president at Blue Shield of California, on effective leadership that helps in sustaining success. Manahan states that leadership includes navigating change and creating a vision that helps to align ones team. Hitchcock states that an effective leader needs to be a great listener of all forms of communications which would lead to understanding. Shivinsky mentions the fundamentals of effective leadership including integrity, trust and honesty.	PubMed
Fostering Transformational Leadership in Business and Health Administration Education through Appreciative Inquiry Coaching	Anne Selcer, Gerald Goodman, Phillip J. Decker	Journals	2012	Business Education Innovation Journal	4	2	Studienziel	Although the leadership skills of visioning, empowering, and encouraging are qualities essential to inspiring and developing the workforce, they are particularly rare and difficult to develop. This article presents business and healthcare educators with a methodology for developing these competencies through the practice of Appreciative Inquiry (Ai) and specifically the technique of Appreciative Coaching. This study tests a method of teaching Appreciative Coaching in the classroom for developing early transformational leadership skills and demonstrates that it can be done. Business Management and Healthcare administration students can benefit by 1) understanding the principles behind appreciative inquiry and how they affect leader performance and 2) participating in specific activities, exercises, and methods contributing to their ability to optimize these skills. Educators can benefit by using methods based upon adult-learning theories that will create greater visionary and empowering skills. While there has been research focused on problem solving leadership behaviors in the organizational setting, this study helps fill the gap in understanding of how to develop visionary and enabling leadership behaviors in the university setting. By providing experiential, appreciative techniques, faculty members are able to enable students to learn to be more visionary and empowering.	EBSCO
Foundations of health psychology: Foundations of Health Psychology From Management to Leadership: Strategies for Transforming Health (3rd ed.)	R Stanwell-Smith	Journals Journals	2004 2011	Public Health Leadership in Health Services	118 24	2 3	Studienziel Studienziel	Review of Pulic Health From Management to Leadership identifies the fundamental interpersonal skills that every health care leader (and aspiring leader) needs to develop in order to be a successful executive or manager. The third edition of the classic text offers suggestions for developing and improving essential health care leadership skills. Written to be a practical guide, the book presents concepts and skills that can be immediately applied to everyday situations. Completely revised and updated, this edition includes new concepts and resources based on the latest research and practices.	ScienceDirect Emerald
Führung als Moderator von Gesundheit, Absentismus und Präsentismus bei Restrukturierungsprozessen	Joachim Vogt, Melanie Schnee	Literatur-nachweis	2012	Zeitschrift für Arbeitswissenschaft	66	4	Studienziel	Strukturelle Veränderungen von Unternehmen wie zum Beispiel Personalabbau oder Standortverlagerungen geben den Mitarbeitern häufig Anlass zur Sorge, etwa dass sie entlassen oder versetzt, ganz neuen Anforderungen gegenübergestellt oder in ihren Befugnissen beschnitten werden. Widerstand gegen Restrukturierungen ist aufgrund dieser Sorgen und Unsicherheiten sehr häufig. physisches, psychisches und soziales Wohlbefinden (Gesundheit) koennen beeintraehtigt werden, Absentismus und Praesentismus koennen damit einhergehen. Vorliegende Daten zeigen, dass Personen, die sich grosse Sorgen machen, eher einen schlechteren Gesundheitszustand berichten und krankheitsbedingt weniger arbeiten koennen. Der Beitrag liefert Hinweise darauf, dass gute Fuehrung die negativen Wirkungen von Restrukturierung abmildern kann.	WISO
Führung und Arbeitsgestaltung - Warum gute Führung allein nicht gesund macht	Rainer Wieland, Sandra Winizuk, Mike Hammes	Literatur-nachweis	2009	Arbeit	18	4	-	Inzwischen hat sich der Einfluss der Führung auf die Gesundheit der Beschäftigten zu einem wichtigen Thema entwickelt. Dieser Artikel berichtet von drei empirischen Studien, in denen der Einfluss des Führungsverhaltens, der Arbeitsgestaltung und der Personeneigenschaften der Beschäftigten auf die Gesundheit der Beschäftigten im Rahmen eines arbeitspsychologischen Analyse- und Interventionsmodells analysiert wird. Das Resultat zeigt: Gute Führung allein macht nicht gesund. Die psychische Beanspruchung während der Arbeit, gesundheitliche Beschwerden, Fehlzeiten und Präsentismus lassen sich auf Wechselwirkungen zwischen Führungsstil und Arbeitsbedingungen zurückführen. Führung und Gesundheit im Kontext eines ganzheitlichen, integrativen, nachhaltigen, ...	Michael Kastner	Literatur-nachweis	2010	Leistungs- und Gesundheitsmanageme nt			Studiendesign	Auf der Grundlage des Zusammenhangs von Fuehrungsverhalten und Gesundheit bzw. psychischen Beschwerden seitens der Fuehrungskraefte selbst sowie der Mitarbeiter wird die Bedeutung eines ganzheitlichen, integrativen, nachhaltigen und systemvertraeglichen Leistungs- und Gesundheitsmanagements in Organisationen diskutiert. Aktuelle Modelle und Studien werden zur Illustration herangezogen. Eingangs wird die Thematik der Verantwortlichkeit fuer die individuelle und kollektive Gesundheit innerhalb einer Organisation erorert. Problematiken betreffend einer Umsetzung eines solchen Konzepts, beispielgebend das Vorhandensein verschiedener Egoismen (Selbstoptimierung auf Kosten anderer) werden thematisiert. Vor diesem Hintergrund wird die Relevanz der Einbeziehung und Vераnderung der Faktoren Person, Situation und Organisation sowie deren Interaktionseffekte fuer eine wirksame Umsetzung eines solchen Projekts thematisiert. Massnahmen zur Optimierung der einzelnen Faktoren und deren Nachhaltigkeit werden eruert. Das Wissen der Fuehrungskraefte um die konkreten Zusammenhaenge von Leistung und Gesundheit stellt eine wichtige Voraussetzung fuer das Funktionieren eines ganzheitlichen Leistungs- und Gesundheitsmanagements dar. Gesundheitsorientiertes Fuehrungsverhalten sollte Aspekte wie Wertschaetzung, Anerkennung, Transparenz, Berechenbarkeit, Empathie, sozialkompetente Kommunikation, passende Anforderungen, Handlungsspielraeume, Kontrollierbarkeit und Entscheidungsspielraeume realisieren. Mit Bezug auf die hohe Einflussnahme von Fuehrungskraeften auf das Funktionieren eines solchen Entwurfs, wird ein konkretes Fuehrungskonzept zur Foerderung des Leistungs- und Gesundheitsverhaltens vorgestellt. Der oekonomische Nutzen sowie ein beispielhaftes konkretes Vorgehen werden erlaeuert. Abschliessend wird die Moeglichkeit und Problematik einer oekonomischen Evaluation eines solchen Projekts besprochen. Explizite Empfehlungen zur Fuehrung im Kontext eines ganzheitlichen Leistungs- und Gesundheitsmanagements werden gegeben, und es wird auf ethische Aspekte und den Aspekt der Lebensqualitaet verwiesen. Führungskräfte und ihre Verantwortung für die Gesundheit ihrer Mitarbeiter - Eine ...	Barbara Wilde, Stephan Hinrichs, Pavez Bahamondes, Schuepbach Carolina, ...	Literatur-nachweis	2009	Wirtschafts-psychologie	11	2	Studienziel	Im Rahmen einer Fragebogenstudie bei 120 Fuehrungskraeften wurde untersucht, welche Bedingungen es beguenstigen, dass Fuehrungskraefte als Verantwortungstraeger in Unternehmen ihrer speziellen Verantwortung fuer die Gesundheit ihrer Mitarbeiter nachkommen und diese gesundheitsfoerderlich fuehren. "Gesundheitsfoerderliches Fuehren" wurde dabei als gesundheitsfoerderliche Interaktion mit den Mitarbeitern, gesundheitsfoerderliche Gestaltung von Arbeitstaetigkeiten sowie Unterstuetzung und Realisierung von betrieblicher Gesundheitsfoerderung operationalisiert. Auf Basis der Theorie des geplanten Handelns (Theory of Planned Behavior, Ajzen, 1991) und erster empirischer Befunde wurden folgende Faktoren abgeleitet, bei denen davon ausgegangen wird, dass sie "Gesundheitsfoerderliches Fuehren" positiv beeinflussen: Eine "Kultur gesundheitsfoerderlichen Fuehrens" im Unternehmen, die "Persoenliche Einstellung" der Fuehrungskraft zu gesundheitsfoerderlichem Fuehren, die von der Fuehrungskraft "Wahrgenommenen Einflüsse auf die Mitarbeitergesundheit" sowie ihre "Persoenlichen Kompetenzen" und die "Betrieblichen Moeglichkeiten", gesundheitsfoerderlich zu fuehren. Anhand dieser fuerf Bedingungsfaktoren lassen sich 46% der Varianz der "Intention", gesundheitsfoerderlich zu fuehren, aufklaeren. Die "Intention", die "Persoenlichen Kompetenzen" und die "Betrieblichen Moeglichkeiten" wiederum koennen gemeinsam 22% Varianzaufklaerung beim "Gesundheitsfoerderlichen Fuehren" leisten. Entscheidend ist fuer die Prognose der "Intention" insbesondere die "Persoenliche Einstellung", ausserdem die "Wahrgenommenen Einflüsse auf die Mitarbeitergesundheit" und die "Persoenlichen Kompetenzen". Bei der Vorhersage des "Gesundheitsfoerderlichen Fuehrens" leisten neben der "Intention" die "Betrieblichen Moeglichkeiten" einen statistisch bedeutsamen Beitrag zur Varianzaufklaerung. Die Implikationen der Ergebnisse fuer die betriebliche Praxis sowie die weitere Forschung werden diskutiert.	WISO
Führungsverhalten und Auswirkungen auf die Gesundheit der Mitarbeiter - Analyse ...	Klaus Zok	Literatur-nachweis	2011				-	Zusammenhaenge zwischen Fuehrungsverhalten und Gesundheit von Mitarbeitern werden auf der Grundlage von Mitarbeiterbefragungen im Rahmen des AOK-Kompaktservice "Gesunde Unternehmen" analysiert. Insgesamt 28.223 Mitarbeiter aus 147 deutschen Betrieben wurden mit dem Fragebogen des Wissenschaftlichen Instituts der AOK (WIdO) zu ihren Arbeitsbedingungen befragt. In Korrelationsanalysen wurde ein deutlicher linearer Zusammenhang zwischen fast allen erhobenen Fuehrungsparametern und Variablen zur Gesundheit bzw. Zufriedenheit der Beschaeftigten ermittelt. Je besser die Fuehrungskompetenz und das Vorgesetztenverhalten bewertet wurden, desto hoeher wurde die Arbeitszufriedenheit und umso geringer wurden die gesundheitlichen Beschwerden eingeschaezt. Die Ergebnisse werden in Hinblick auf Massnahmen zur Verbesserung des Fuehrungsverhaltens hin zu vorausschauendem Mangement und kompetenter Mitarbeiterfuehrung diskutiert.	WISO
Führungsverhalten und Gesundheit - Zum Stand der Forschung	S Gregersen, S Kuhnert, A Zimber, A Nienhaus	Literatur-nachweis	2011	Das Gesundheitswesen	73	1	Studiendesign	Der Zusammenhang zwischen Fuehrungsverhalten und Gesundheit steht erst seit einiger Zeit verstaerkt im Fokus wissenschaftlicher Untersuchungen und die vorliegenden Erkenntnisse zu diesem Thema sind bislang kaum systematisch aufbereitet und zusammengefasst worden. Dieser Artikel versucht, einen zusammenfassenden Ueberblick ueber den aktuellen Stand der Forschung zu geben. In einschlaegigen Datenbanken wurden 42 Publikationen zum Zusammenhang zwischen Fuehrungsverhalten und der Gesundheit bzw. dem Wohlbefinden von Mitarbeitern gefunden. In der Literatur wird Fuehrungsverhalten sowohl als Stressor als auch als Ressource diskutiert. Die vorliegenden Veroeffentlichungen liefern zudem erste empirische Belege zum Einfluss unterschiedlicher Fuehrungsstile auf die Mitarbeitergesundheit. Vor allem eine transformationale und eine mitarbeiterorientierte Fuehrung sind demnach gesundheitsfoerderlich. Die Frage, in welcher Weise das Fuehrungsverhalten auf die Gesundheit Einfluss nimmt, konnte jedoch noch nicht befriedigend geklaert werden. In den meisten der beruecksichtigten Veroeffentlichungen wurde ein direkter Zusammenhang unterstellt und mehrheitlich auch empirisch bestaetigt. Daneben erscheint aber auch eine indirekte Wirkung moeglich, die z. B. ueber Arbeitsbedingungen und Persoenlichkeitsmerkmale moderiert oder mediert wird. Die relativ kleine Zahl von Untersuchungen zum Einfluss von Fuehrungsverhalten auf Gesundheit und Wohlbefinden von Mitarbeitern zeigt, dass weiterer Forschungsbedarf besteht.	WISO
Führungsverhalten und Gesundheit in "alternden" Unternehmen / Organisationen bei ...	Jörg Danneier, Gregor Wittke	Literatur-nachweis	2012				Studienziel	Aspekte der Bezuege zwischen Fuehrungsverhalten und Gesundheit in Organisationen werden mit Blick auf das Problem "alternder" Organisationen bei zunehmender Wettbewerbssituation angesprochen. Gesundheit wird als Kostenfaktor und Ressource gekennzeichnet. Gesundheitsverstaendnis und Fuehrungsverhalten im organisationalen Kontext werden verdeutlicht und das zielorientierte Fuehrungsverhalten wird skizziert. Das Fuehrungsverhalten wird sowohl in seiner Relevanz als gesundheitsschaedlicher Stressor als auch als gesundheitsfoerdernde Ressource betrachtet. In diesem Zusammenhang wird auf positive Fuehrungsstile hingewiesen. Abschliessende Ausfuehrungen betreffen die Bedeutung von gesunder Fuehrung und Wohlergehen als Wirtschaftsfaktor.	WISO

Functions and Positions of Corporate Occupational Health Managers in Company-Wide Occupational Health Management	K Mori, T Nagata, S Kajiki, Y Hino, M Nagata	Journals	2013	Sangyo Eiseigaku Zasshi			Studienziel	Objectives: It has become necessary for Japanese corporations to manage occupational health (OH) programs consistently throughout their organizations. Corporations need to clarify their health policies, develop standardized programs, assign OH staff, and ensure that they communicate with each other. To realize such conditions, many occupational physicians (OPs), who have the skills to lead corporation-wide OH activities, are now being assigned to head offices of corporations and referred to as corporate OH managers. However, there has been no research to date in Japan on their actual situation and function. We conducted an interview study of corporate OH managers to clarify their functions and positions in corporations. Subjects and Methods: We conducted semi-structural interviews with 14 corporate OH managers in large corporations employing more than 5,000 workers and multiple OPs. Interview scripts were coded to identify their functions as corporate OH managers and the context of their positions within corporate-wide OH management systems. Results: Five contexts were suggested. 1) Corporate OH managers played central roles in developing corporate health policies, standards and plans. 2) Head office department managers who supervised the sites distributed the policies and standards, and corporate OH managers instructed site OPs and OH staff. 3) In some corporations, corporate OH managers participated in the evaluation process of OH programs as part of occupational safety and health management systems or business audits. 4) Corporate OH managers led communications among OPs and OH staff by facilitating corporate OH meetings, and provided technical training. 5) Corporate OH managers in positions that enabled them to report directly or indirectly to decision makers (i.e., directors in charge) on human resource issues. Discussion: The results of this study suggest that companies that promote consistent company-wide OH programs also utilized the professional knowledge of OH managers as well as their decision-making skills and direction processes. They also suggest that these companies play significant roles in securing qualified OH professionals and reaching a common understanding of corporate OH systems. It is necessary to study cases of corporate OH managers to clarify their essential competences and to develop appropriate training programs.	PubMed	
Fusion and decision making techniques for structural prognostic health management	H Azzam, F Beaven, T Hebden, L Gill, W Wallace	Literatur-nachweis	2005	Piscataway			Studienziel	There is a growing interest in fusing the wealth of data generated by aircraft sensors and airborne systems into prognostic information and automated decisions that lead to significant improvements in aircraft management, affordability, availability, airworthiness and performance (MAAAP). Over the past five years, Smiths and BAE SYSTEMS have launched collaborative work to evolve a certifiable practical system that addresses this interest. The collaborative work has built on the BAE SYSTEMS vast advanced technology experiences and on the Smiths unique experience that has produced prognostic and decision support algorithms combining model-based and artificial intelligence (AI) techniques. This paper reports on certifiable techniques that fuse flight data into prognostic information. The techniques were blind tested on legacy data covering 15 years of military operations. The paper presents a fusion/decision support technique targeted at identifying sensor/system faults. The paper also presents preliminary collaborative work on a structural damage detection technology where AI and fusion methods have been used to mitigate technology risks.	WISO	
Generating workplace health-promoting leadership: The case of an intervention programme in Gothenburg, Sweden		Journals	2010	Development and Learning in Organization		24	5	Studiendesign	Purpose – Reviews the latest management development across the globe and pinpoints practical implications from cutting-edge research and case studies. Design/methodology/approach – This briefing is prepared by an independent writer who adds their own impartial comments and places the articles in context. Findings – Workplace health promotion creates real benefits to an organization. But, in order to create and sustain a health promoting workplace, it is worthwhile to invest in the development of health promoting leadership. The study under review shows the importance of regarding the development of health promoting leadership as a contribution of the building of organizational capacity. In particular, it assesses the comprehensiveness of an intervention programme in Sweden, its integration with other health promoting activities, and the participation of managers. Practical implications – Provides strategic insights and practical thinking that have influenced some of the world's leading organizations. Originality/value – The briefing saves busy executives and researchers hours of reading time by selecting only the very best, most pertinent information and presenting it in a condensed and easy-to-digest format.	Emerald
Gesunde Betriebe, aber wie? Gesundheitsmanagement als Teil der Unternehmensstrategie ...	Dodo zu Knyphausen-Aufseß, Stefanie Alexandra	Literatur-nachweis	2009	Industrie Management	25	4	Studienziel	Die Belastung durch krankheitsbedingte Fehlzeiten für die deutschen Arbeitgeber ist in den letzten Jahren stetig gestiegen. Gleichzeitig kommt dem Humankapital als Kompetenz- und Leistungsträger und somit auch dessen Gesundheit eine steigende Rolle bei der Wettbewerbsfähigkeit von Unternehmen zu. In der Praxis, insbesondere in kleinen und mittleren Unternehmen, mangelt es bisher jedoch an der strategischen Einbindung und Umsetzung entsprechender Vorhaben. Mittels einer Fallstudie im Automobilhandel stellt dieser Beitrag einen Bezugsrahmen zur Integration von Maßnahmen der betrieblichen Gesundheit in die Unternehmensstrategie vor und gibt Hinweise für deren Umsetzung anhand von Methoden des Projektmanagements.	WISO	
Gesunde Lebensführung heißt, Grenzen zu kennen und zu beachten		Statistik					Studienziel	Die Statistik bildet das Ergebnis einer Umfrage zu der Frage, ob gesunde Lebensführung heißt, die eigenen Grenzen zu kennen, ab. Die Frage entstammt aus der größten Markt-Media-Untersuchung für Kleidung, Schuhe und Accessoires in Deutschland, der Outfit 6. 28,1 Prozent der Befragten gaben an, dass die Aussage "Gesunde Lebensführung heißt für mich, meine Grenzen zu kennen und sie zu beachten" ganz genau zutrifft. Gesunde Mitarbeiter kosten Geld - kranke ein Vermögen. Betriebliches Gesundheitsmanagement	Gabriele Sommer, Dominik Hamner	Literatur-nachweis	2010	Personalführung	43	7	Studienziel	Vor dem Hintergrund wachsender Anforderungen an die Flexibilität und Leistungsbereitschaft von Arbeitnehmern, die der begrenzten Leistungsfähigkeit eines Menschen gegenüber stehen, wird der Frage nachgegangen, wie viel Arbeitgeber in gesundheitsfördernde Massnahmen investieren müssen, um den immer häufiger auftretenden Belastungen der Arbeitnehmer entgegenzuwirken. So hat eine Befragung von 28 Betriebsärzten und 157 Unternehmen ergeben, dass das Problembewusstsein der Unternehmen bezüglich der psychischen Gesundheit ihrer Mitarbeiter nicht genügend ausgebildet ist. Anhand von zwei Fallbeispielen wird die bedarfsorientierte Hilfe des TLfV Süd Life Service vorgestellt, der umfassende Beratung und Betreuung auf allen Gebieten der Arbeitsmedizin, Arbeitssicherheit und Arbeitspsychologie anbietet. Dabei berät und unterstützt ein Team aus mehr als 400 Psychologen, Ärzten und weiteren Fachkräften Unternehmen bei der Implementierung eines ganzheitlichen betrieblichen Gesundheitsmanagements. Das erste Beispiel beschreibt die Teilnahme von Aussendienstmitarbeitern der Paul Hartmann AG an der Seminarreihe "Bleib cool - fahr sicher", während das zweite darstellt, wie Führungskräfte des Elektronikunternehmens Rohde und Schwarz zum Thema "Rückkehrgespräch" geschult wurden. Beide Beispiele verdeutlichen, dass die Investitionskosten in betriebliches Gesundheitsmanagement schnell durch steigende Produktivität und Einsparung von Ressourcen kompensiert werden können.	WISO

Gesundheit als Führungsaufgabe und Unternehmensziel. Gesundheitsmanagement bei den ...	Bettina Finger	Literatur-nachweis	2007	Personalführung	40	1	Studienziel	Im Januar 2006 haben die Generali Versicherungen in Muenchen ihr betriebliches Gesundheitsmanagement fuer den Innendienst eingefuehrt. Es soll gesundheits- und gesellschaftspolitische sowie demografische Veraenderungen und Herausforderungen antizipieren und mit geeigneten Massnahmen reagieren. Vorgestellt wird ein Gesundheitskonzept, das Mitarbeiter aktiv in ihre Gesundheitsvorsorge einbindet und eine breite Palette von Angeboten und Massnahmen aufweist. Es wird eingeraeumt, dass Gesundheitsmanagement zwar aufwaeuend sei, es sich aber in vielerlei Hinsicht sowohl fuer die Mitarbeiter als auch fuer das Unternehmen lohne.	WISO	
Gesundheit wird zum Erfolgsfaktor - Unternehmen müssen beim Thema Strategie, Kultur und Führung umdenken	P Buchenau	Buch	2013	Chefsache Gesundheit			Studiendesign	Führung sieht heute leider in deutschen Unternehmen so aus: 33% aller Führungskräfte schicken ihreMitarbeiter bei einer ersten Erkrankung nicht nach Hause. 17 % sagen, von häufig kranken Mitarbeitern solltman sich trennen. 10 % aller Chefs halten ein individuelles Prämiensystem bei wenigen Krankheitstagen für ein geeignetes Steuerungsinstrument. So das Ergebnis einer Umfrage der Hochschule Coburg aus dem Jahr 2012. Ein Armutzeugnis für deutsche Führungskräfte. Doch was muss sich ändern? In Chefsache Gesundheit zeigt Peter Buchenau auf, was Unternehmer tun müssen, um morgen noch an der Spitze dabei zu sein. Gesundheit wird immer mehr und mehr zum Erfolgsfaktor in Unternehmen und ist aus der Unternehmensvision und Strategie nicht mehr wegzudenken. Das ganze hat auch betriebswirtschaftliche Auswirkungen. Ob Unternehmer Geld verlieren oder Geld gewinnen hängt vom jeweiligen Unternehmertyp ab. Wie immer gibt es Verlierer und Gewinner. Es liegt bei Ihnen, welcher Gattung Sie angehören möchten. Chefsache Gesundheit ist für Gewinner geschrieben.	Google Scholar	
Gesundheit: Hochkosten-Management wird wenig genutzt	Matthias P Schönermark, Thomas Tenme, Heike Kielhorn	Fachzeitschri ft	2011	Versicherungswirtschaft			Studien-teilnehmer	Viele Krankenversicherer waren bislang zurückhaltend, sich mit Steuerungsansätzen für die Fälle sehr schwer kranker Patienten (Hochkostenfälle) zu beschäftigen. Dabei gibt es auf fundierter analytischer Basis segmentspezifische Konzepte zur Kostenkontrolle und zur Optimierung der Versorgungsqualität für den individuellen Patienten.	WISO	
Gesundheits- und entwicklungsförderliches Führungsverhalten: Gendertypische Differenzen	Sylvie Vincent	Literatur-nachweis	2012	Gruppendynamik und Organisationsberatung	43	1	-	Der Einfluss des Führungsverhaltens auf die Gesundheit der Mitarbeiterinnen und Mitarbeiter rückt in den letzten Jahren zunehmend ins Zentrum des Interesses. In der vorliegenden Untersuchung wurden 685 Mitarbeiterinnen und 637 Mitarbeiter anhand der neu entwickelten Gesundheits- und Entwicklungsförderlichen FührungsverhaltensAnalyse (GEFA) zum Verhalten ihrer bzw. ihres direkten Vorgesetzten befragt. Zudem wurden sowohl positive als auch negative Befindensindikatoren der Mitarbeiterinnen und Mitarbeiter erhoben. Das Führungsverhalten weist substantielle signifikante Zusammenhänge mit saemntlichen Befindensindikatoren auf. Das dem Instrument zugrunde liegende Modell gesundheits- und entwicklungsförderlicher Führung - bestehend aus den Dimensionen: Ueberfordernde Führung, Entwicklungsorientierte Führung und Unterstützungsorientierte Führung - konnte bestaetigt werden. Differenzierte Analysen nach Geschlecht der Führungskraft und Geschlecht der Mitarbeiter weisen auf Unterschiede im Führungsverhalten hin, die sich im Befinden der Mitarbeiterinnen und Mitarbeiter widerspiegeln. Aus den Ergebnissen lassen sich eine Vielzahl von Implikationen fuer Wissenschaft und Praxis ableiten.	WISO	
Gesundheitsbezogene Führung	Franziska Franke, Sylvie Vincen, Jörg Felfe	Literatur-nachweis	2011				Studiendesign	Aus der Perspektive des Gesundheitsmanagements in der Arbeitswelt wird der Stellenwert einer gesundheitsbezogenen Führung erörtert. Dabei stehen nach einleitenden terminologischen Klärungen folgende Aspekte im Mittelpunkt: (1) Zunahme der Bedeutung gesundheitsgerechter Führung (Veränderungen in der Arbeitswelt und damit einhergehende psychische Belastungen; Anstieg psychischer Belastungen; Führungskräfte als Risikofaktor), (2) der Beitrag bisheriger Führungsansätze, (3) neue Ansätze gesundheitsförderlicher Führung (gesundheits- und entwicklungsförderliches Führungsverhalten; "health-oriented leadership"), (4) führungsbezogene Gesundheitsförderungsmaßnahmen. Die neueren Ansätze gesundheitsförderlicher Führung sowie die besprochenen Ansatzpunkte zur Verbesserung des Engagements von Führungskräften werden zusammengefasst und in einem zweitägigen Trainingsmodul fuer Führungskräfte, das abschliessend in tabellarischer Form vorgestellt wird, integriert.	WISO	
Gesundheitsfördernd führen - Ein Projekt der Berufsgenossenschaft für Gesundheitsdienst ...	Andreas Zimmer, Sabine Gregersen	Literatur-nachweis	2011				-	Vor dem Hintergrund von Forschungsergebnissen zu Zusammenhaengen zwischen Führung und Gesundheit aus der Perspektive von Führungskraeften wird ein Interventionsansatz der Berufsgenossenschaft fuer Gesundheitsdienst und Wohlfahrtspflege (BGW) zur Foerderung des Arbeitsschutzes und der Gesundheit vorgestellt. Zunaechst werden Einfluesse der Führungskraefte auf die Mitarbeitergesundheit beschrieben, und anhand einer Literaturuebersicht wird gesundheitsfoerderliches Führungsverhalten identifiziert. Anschliessend werden Erfahrungen bei der Umsetzung des Projekts der BWG beschrieben, in dem Veraenderungsprozesse durch Führungsfeedback initiiert werden sollen. Neben Zielsetzungen der Intervention werden Entwicklung, Durchfuehrung und Interpretation eines Instruments zur Selbst- und Fremdeinschaetzung beschrieben, das als Grundlage zur Optimierung des Managements durch systematisches Feedback genutzt wird. Aus den bisherigen Umsetzungserfahrungen in vier deutschen BWG-Mitgliedsbetrieben werden Schlussfolgerungen fuer die Weiterentwicklung der Interventionsmassnahme gezogen.	WISO	
Gesundheitsförderung - Gesundheitsmanagement	Eva Bamberg, Antje Ducki, Anna-Marie Metz	Literatur-nachweis	2011				Studienziel	Es wird der Frage nachgegangen, welches Wissen fuer Massnahmen im Bereich der betrieblichen Gesundheitsfoerderung und des Gesundheitsmanagements erforderlich sind. Dabei werden drei Wissensbereiche unterschieden: Erfahrungswissen, psychologisches Wissen und interdisziplinäres Wissen. Es wird deutlich gemacht, dass fuer die Gesundheitsfoerderung und das Gesundheitsmanagement Wissen sowie Methoden und Instrumente vorliegen, die fuer die Analyse und Intervention genutzt werden koennen. Dabei koennen unterschiedliche Arten von Wissen die Grundlage betrieblicher Gesundheitsfoerderung bilden: Faktenwissen, das sich auf den Ist-Zustand von Belastungen und Ressourcen am Arbeitsplatz und von Gesundheits- und Krankheitsentwicklung der Beschaeftigten bezieht, Grundlagenwissen, das sich auf den Zusammenhang zwischen Arbeit und Gesundheit und auf den Prozess der Gesundheitsfoerderung bezieht, technologisches Wissen, das Moeglichkeiten der Foerderung von Gesundheit betrifft. Damit ist nur eine Basis unter anderen fuer betriebliche Gesundheitsfoerderung gegeben, denn diese erfolgt auf der Grundlage unterschiedlicher wissenschaftlicher Fachgebiete und setzt inter- und transdisziplinäre Kooperation voraus; ein Rueckgriff auf Erfahrungswissen ist unerlaesslich. Fuer Theorie und Praxis betrieblicher Gesundheitsfoerderung ergeben sich hinsichtlich der psychologischen Grundlagen drei vordringliche Aufgaben: (1) psychologisches Wissen so aufzuarbeiten, dass es im praktischen Handeln der Gesundheitsfoerderung genutzt werden kann, (2) psychologisches Wissen so aufzubereiten, dass es verstaerkt im interdisziplinären Kontext zu nutzen ist, (3) Alltagserfahrungen und praktisches Handeln in der Gesundheitsfoerderung in wissenschaftlichen Arbeiten einzubeziehen. Gesundheitsförderung und Gesundheitsmanagement: Konzeptuelle Klärung	Eva Bamberg, Antje Ducki, Anna-Marie Metz	Literatur-nachweis	2011				Studiendesign	Im Rahmen einer konzeptuellen Klärung werden gesundheitsbezogene Massnahmen systematisiert, und auf dieser Grundlage werden Gegenstand und Aufgaben von Gesundheitsförderung und Gesundheitsmanagement konkretisiert. Dabei wird folgendes Fazit gezogen: Es gehoert zu den originalen Aufgaben von betrieblichem Gesundheitsmanagement, auf der Basis von Zielen und im Rahmen einer Gesamtkonzeption gesundheitsbezogene Massnahmen in einer Organisation zu planen, durchzuführen und zu bewerten. Dabei erfolgt eine Koordination mit der Personal- und Organisationsentwicklung. Gesundheitsmanagement beruecksichtigt die Einbeziehung und den Kontext betrieblicher Steuerungsinstrumente und orientiert sich auch an betriebswirtschaftlichen Ziel- und Erfolgsgrössen. Ein von den Grundprinzipien der Gesundheitsförderung getragenes Gesundheitsmanagement beruecksichtigt Massnahmen, die langfristig die Gesundheit weiterentwickeln, die verhaltensbezogene Angebote und verhaltensbezogene Massnahmen miteinander kombinieren, die nicht nur Belastungen und Risikofaktoren reduzieren, sondern auch situative und personale Ressourcen stärken. Das Thema Gesundheit wird so in das betriebliche Gesamtgeschehen integriert, dass nicht nur praeventiv gehandelt wird, sondern dass proaktiv vorausschauend bei betrieblichen, wirtschaftlichen, personellen oder technischen Entscheidungen die Foerderung der Gesundheit im Sinne Ressourcenbereitstellung und -foerderung mitberuecksichtigt wird.	WISO
Gesundheitsmanagement	Bernhard Zimolong,Gabriele Elke, Rüdiger Trimpop	Literatur-nachweis	2006				Studienziel	Der psychologische Beitrag zum betrieblichen Gesundheitsmanagement wird im Ueberblick dargestellt. Dabei wird auf folgende Aspekte eingegangen: (1) aktuelle Trends im Arbeits- und Gesundheitsschutz, (2) konzeptionelle Grundlagen des betrieblichen Gesundheitsmanagements und empirische Befundlage, (3) Management, Führung und Gesundheitskultur (strukturelle und interaktive Führung, personale Führung und Beteiligung, Gesundheitskultur und Gesundheitsklima), (4) Management der Gesundheitsrisiken und Ressourcen (psychische Belastungen und Ressourcen, Strategien der Risikokontrolle und Ressourcenförderung, Leistungsmessung und Leistungsüberprüfung), (5) Gesundheitsförderung und Praevention (Interventionsarten, Verhaltens- und Stressmanagement, Beteiligung und Einbindung). Die bisher gesammelten Erfahrungen zur Effizienz des betrieblichen Gesundheitsmanagements werden abschliessend bewertet	WISO
Gesundheitsmanagement bei Existenzgründungen	Ulf Kieschke	Literatur-nachweis	2011				Studienziel	Es wird im Ueberblick informiert ueber Gesundheitsmanagement in Kontext von Existenzgründungen. Zunaechst werden die Anforderungen, mit der sich Gruender und beruflich Selbststaendige auseinanderzusetzen haben, aus gesundheitspsychologischer Perspektive beschrieben. Dann werden ausgewählte empirische Befunde zu Existenzgruendern vorgestellt. Im Mittelpunkt steht dabei ein typologischer Ansatz zur berufsbezogenen Persönlichkeitsbeschreibung. Ausserdem werden Bewältigungsmuster bei Existenzgruendern thematisiert. Aus den Befunden werden Ansatzpunkte fuer Interventionen abgeleitet und am Beispiel des AVEM-("Arbeitsbezogenes Verhaltens- und Erlebensmuster")-Risikomusters Typ A (Typencharakteristik: exzessive Verausgabung bei eingeschränkter Widerstandskraft und geringer Zufriedenheit) veranschaulicht.	WISO
Gesundheitsmanagement in Unternehmen - aktuelle Themen und Problemfelder	Ingela Joens	Literatur-nachweis	2012				Studienziel	Ausgewählte Ergebnisse einer Interviewstudie mit 20 betrieblichen Experten zum Stand des Betrieblichen Gesundheitsmanagements (BGM) werden berichtet. Im Zentrum der Befragungen standen das Ausmass des BGM-Eingagements, dessen Ziele und Umsetzung sowie aktuelle BGM-Themen. Die Ergebnisse dokumentieren, dass strukturelle Massnahmen bislang relativ wenig beachtet werden, dass bei aktuellen Themen noch das Vorleben durch die Führungskräfte fehlt und dass die angestrebten und erreichten Ziele von verschiedenen Dimensionen der Unternehmenskultur abhangen.	WISO
Gesundheitsmanagement mit jungen ArbeitnehmerInnen	Dieter Sommer, Detlef Kuhn, Claudia Redetzky	Literatur-nachweis	2011				Studienziel	Es wird im Ueberblick informiert ueber betriebliche Gesundheitsmanagementansätze fuer junge Arbeitnehmer. Dabei stehen folgende Aspekte im Vordergrund: (1) gesundheitliche Situation junger Arbeitnehmer (Belastungen, Ressourcen, Arbeitsunfähigkeit und Erkrankungen), (2) Handlungsansätze im betrieblichen Gesundheitsmanagement (Strategiebildung, partizipative Analyse, Intervention, Dokumentation und Evaluation). Zusammenfassend wird konstatiert, dass der bessere Gesundheitsstatus jungerer Menschen einerseits dazu fuehrt, mit der Ressource Gesundheit sorglos umzugehen, dass andererseits die gesundheitlichen Probleme jungerer Arbeitnehmer besonders bei niedriger qualifizierten Gruppen rasant ansteigen. In den Unternehmen wird das Anciennitätsprinzip vergangener Tage immer mehr durch leistungsorientierte Ordnungsgrossen abgelöst. Das hat auch Wirkungen auf das Zusammenarbeiten der Generationen. Dabei gibt es unterschiedliche Szenarien. Junge Führungskräfte stossen auf Akzeptanzprobleme bei aelteren und erfahrenen Mitarbeitern. In altersgemischten Teams koennen junge Arbeitnehmerinnen aber auch eine ganz andere Rolle erfahren: Sie sind es, die ganz einseitig fuer die Erfulgung koerperlich schwerer und gesundheitsriskanter Tuetigkeiten zustandig sind. Insgesamt bereiten jungere Mitarbeiter aber die psychosozialen Problemfelder im Zusammenhang mit der Arbeit die grosseren Schwierigkeiten. Belastungen durch nicht gelöste Konflikte und schwierige Rollenmuster am Arbeitsplatz sind inzwischen auch empirisch belegt. Ganz besonders werden diese Belastungen in der betrieblichen Ausbildung und in der Berufseinstiegsphase erkennbar. Ein betriebliches Gesundheitsmanagement, das auch die Situation jungerer Arbeitnehmern gezielt im Auge hat, muss also eine grosse Offenheit fuer psychosoziale Probleme entwickeln und in staerkerem Masse als beispielsweise ergonomisch fokussierte Programme auf partizipative Prozesse setzen.	WISO
Gesundheitsmanagement, Präsentismus und Core Self-Evaluations	Philipp Weiherl, Andre Emmernacher, Petra Kemter	Literatur-nachweis	2007				Studienziel	Ausgehend davon, dass die Foerderung und der Erhalt der Gesundheit der Mitarbeiter fuer ein Unternehmen eine zentrale Bedeutung hat, werden die Rolle des betrieblichen Gesundheitsmanagements, das Phänomen des Praesentismus und der Zusammenhang von Core Self-Evaluations (CSE, fundamentale Annahmen ueber sich selbst) und Gesundheit eroert. Die Herausforderungen und Aufgaben des Gesundheitsmanagements und die damit einhergehende Bedeutung einer strategischen Komponente, bestehend aus Strategie, Controlling und Reporting, werden beschrieben. Eine strukturierte, ziel- und bedarfsorientierte Vorgehensweise wird am Beispiel des Pilotprojekts der Siemens AG in Berlin geschildert. Der Begriff des Praesentismus - Anwesenheit bei der Arbeit trotz Krankheit - wird eingefuehrt und seine oekonomischen und gesundheitliche Auswirkungen werden betrachtet. In einer eigenen Untersuchung zeigte sich, dass Mitarbeiter mit einer hohen Praesentismuseigung einen schlechteren Gesundheitszustand aufwiesen als Mitarbeiter mit einer geringen Praesentismuseigung. Die negativen Zusammenhaenge von CSE mit der physischen und der psychischen Gesundheit werden diskutiert. Beispielhaft wird anhand von CSE die Wichtigkeit einer ganzheitlichen Gesundheitsförderung aufgezeigt.	WISO
Gesundheitsmanagement. Kampf den arbeitsbedingten Erkrankungen	Eberhard Ulich	Literatur-nachweis	2004	Management und Qualität	39	12	Studienziel	Eine Reihe neuerer Untersuchungen zeigen, dass krankheitsbedingte Abwesenheit für die Unternehmen nicht nur organisatorische Probleme sondern auch erhebliche Kosten verursachen kann. In Deutschland wurden im Jahr 2001 508 Millionen Ausfalltage registriert, die für den Produktionsausfall entstandenen Kosten werden auf rund 45 Milliarden Euro geschätzt. Der Anteil arbeitsbedingter Erkrankungen wird auf ca. 40 % geschätzt. Die Verbesserung der Gesundheit muss zu einem der vordringlichen Ziele der Wirtschafts- und Gesellschaftspolitik werden. Betriebliches Gesundheitsmanagement darf sich nicht mehr nur auf den Arbeitsschutz beschränken. Arbeitsschutz und Gesundheitsförderung müssen vielmehr gemeinsam Bestandteile eines betrieblichen Gesundheitsmanagements sein, das die unterschiedlichen Perspektiven systematisch berücksichtigen und integrieren muss. Ernst gemeintes betriebliches Gesundheitsmanagement kann sich nicht auf verhaltensorientierte Maßnahmen beschränken sondern muss bedingungsbezogenen Maßnahmen den Vorrang geben. Der Schwerpunkt betrieblicher Gesundheitsförderungsaktivitäten liegt nach wie vor bei den personenbezogenen Interventionen, also bei der Veränderung des Verhaltens, obwohl immer wieder betont wird, dass eine Veränderung der Verhältnisse durch Maßnahmen der Arbeitsgestaltung notwendig ist. Eine ungenügende Ausprägung der Merkmale persönlichkeitsförderlicher und Aufgabenorientierung bewirkender Aufgabengestaltung kann eine Gefährdung der Gesundheit bedeuten. Arbeitspsychologische Konzepte, die formuliert worden sind, um Arbeit persönlichkeitsförderlich zu gestalten, sind zugleich entscheidende Elemente betrieblicher Gesundheitsförderung und gesundheitsförderlicher Arbeitsgestaltung. Gesundheitsmarketing: Schnittstelle von Marketing, Gesundheitsökonomie und Gesundheits-psychologie	R Mai, U Schwarz	Buch	2012	Angewandtes Gesundheitsmarketing			Studienziel	Der Gesundheitssektor gehoert zu den größten und sich am schnellsten entwickelnden Märkten der Weltwirtschaft. Maßgeblich hierfür ist ein starker Anstieg von Erkrankungen, der gerade in industrialisierten Gesellschaften zu beobachten ist. Viele dieser Erkrankungen sind auf einen Wandel des Lebensstils zurückzuführen (z. B. Alltagsstress, Fehlernährung, Bewegungsarmut). Schätzungen gehen davon aus, dass allein ernährungsassoziierte Krankheiten, wie Diabetes mellitus Typ 2, dazu führen, dass die gesundheitsbezogenen Ausgaben des Staates stark anwachsen (vgl. Bagust et al. 2002).	Google Scholar

Gesundheitspsychologie	Toni Faltermaier	Literatur-nachweis	2005				Studiendesign	Es wird eine systematische Einfuehrung in die noch junge Disziplin der Gesundheits-psychologie gegeben. Dabei wird eine in sich geschlossene und aktuelle Uebersicht ueber zentrale gesundheitspsychologische Theorien, wichtige Ergebnisse der Forschung und neue Anwendungsmoeglichkeiten dagelegt. Ausgehend von den Problemen des medizinischen Gesundheitssystems werden die Grundfragen und Grundbegriffe einer modernen Psychologie der Gesundheit entwickelt. Theoretische Modelle der Krankheitsentstehung und der Salutogenese werden als Orientierung herangezogen, um die psychischen und sozialen Einfluesse auf den Gesundheitsprozess und Krankheitsprozess systematisch zu beschreiben. Einen grossen Raum nimmt dabei die Bedeutung der Gesundheits-psychologie fuer die Praxis ein, insbesondere fuer die dringend notwendige Praevention und Gesundheitsfoerderung. - Inhalt: (1) Einleitung: Warum Gesundheits-psychologie? (2) Die Gesundheits-psychologie als wissenschaftliche Disziplin. (3) Theoretische Modelle der Gesundheits-psychologie und Gesundheitswissenschaften. (4) Psychosoziale Bedingungen bei der Entstehung von Krankheiten: Risiken und Risikoverhalten. (5) Psychosoziale Bedingungen von Gesundheit: Salutogenese, Gesundheitsressourcen und Gesundheitsverhalten. (6) Krankheitsleben und der Umgang mit Krankheiten. (7) Gesundheit und Krankheit im Lebenslauf. (8) Praevention und Gesundheitsfoerderung: Konzepte und Praxisansaezte.	WISO
Gesundheitspsychologie	Ralf Schwarzer	Literatur-nachweis	2005				Studiendesign	Im vorliegenden Band der "Enzyklopaedie der Psychologie" wird die Gesundheits-psychologie als eine aufstrebende Teildisziplin innerhalb der Psychologie in ihren einzelnen Themen behandelt. Gesundheitspsychologie	M Sieverding	Buch	2010	Handbuch Psychologie und Geschlechterforschung			Studienziel	Sind Frauen kranker als Männer? Was macht Frauen krank? Warum sterben Männer früher? Geschlechtsunterschiede in Morbidität und Mortalität haben seit den 1970er Jahren zunehmende Aufmerksamkeit erlangt, zunächst vor allem in Hinblick auf die Gesundheit der Frauen. Eine Reihe von Arbeiten setzte sich beispielsweise mit der Frage auseinander, ob und inwiefern Frauen „das kränkere“ Geschlecht seien. Die amerikanische Soziologin Verbrugge beispielsweise wunderte sich: „How can the sicker sex have greater longevity?“ (Verbrugge, 1976), und auch in Deutschland erschienen mehrere Veröffentlichungen zur Frauengesundheit (s. z.B. Hagemann-White, 1994; Schneider, 1981). In den ersten deutschsprachigen Lehrbüchern für Gesundheits-psychologie, die in den 1980er und -90er Jahren erschienen, waren Geschlechtsunterschiede in Gesundheit und Gesundheitsverhalten sowie Versuche, diese zu erklären, jedoch noch kein Thema. Dabei ist die Variable „Geschlecht“ eine sehr entscheidende Variable zur Vorhersage von gesundheitsrelevantem Verhalten, von Anfälligkeit für bestimmte Erkrankungen und nicht zuletzt für die Lebenserwartung. Will man beispielsweise vorhersagen, welche Personen ein bestimmtes gesundheitliches Risikoverhalten mit höherer Wahrscheinlichkeit ausüben werden, ist die Variable „Geschlecht“ ein sehr guter Prädiktor. Riskanter Alkoholkonsum, gefährliche Sportarten oder riskantes Autofahren sind deutlich häufiger bei Männern zu finden. Frauen haben dagegen öfter ein gestörtes Verhältnis zu ihrem eigenen Körper und entwickeln mit größerer Wahrscheinlichkeit Essstörungen wie Bulimie (Ess-Brechsucht) oder Magersucht. Beim Rauchen gab es bis vor kurzem mit überwiegend männlichen Rauchern ebenfalls einen klaren Geschlechtsunterschied, der sich jedoch in den letzten Jahren stark verringert hat; insbesondere in jüngeren Altersgruppen haben die Mädchen und jungen Frauen „aufgeholt“. Gesundheitspsychologische Prävention	Matthias Jerusalem	Literatur-nachweis	2007				Studienziel	Ansaezte der gesundheitspsychologischen Praevention im Kindes- und Jugendalter, die auf eine theoriegeleitete, entwicklungsorientierte und risikobezogene Staerkung von Ressourcen abzielt, werden behandelt. Schwerpunktmaessig werden universelle Praeventionsmoeglichkeiten mit gesundheitspezifischer und allgemeiner Ausrichtung thematisiert. Gesundheitsspezifische Ansaezte beziehen sich auf fruehes Lernen und Verhaltenseineubung. Motivierung zu Gesundheitsverhalten und eine prozessorientierte Verhaltensunterstuetzung. Unter dem Aspekt der allgemeinen gesundheitspsychologischen Praevention werden der Umgang mit sozialem Einfluss, Stressbewaeltigungs- und Lebenskompetenzen, Elterntrainings und systemische Massnahmen besprochen. Angesichts erhoelter Risiken werden Praeventionsstrategien eroert, die sich auf die Risikodifferenzierung, die risikobezogene Entwicklungsorientierung und das theoretische Konzept von Entwicklungspfaden beziehen. Abschliessend werden der Stand der gesundheitspsychologischen Praevention zusammengefasst und ein Ausblick auf zukuenftige Forschungserfordernisse gegeben.	WISO
Gesundheits- und entwicklungsförderliches Führungsverhalten: ein Analyseinstrument	Sylvie Vincent	Literatur-nachweis	2011				-	Auf der Grundlage eines integrativen Fuehrungsansatzes, in dem Erkenntnisse aus der Stress- und der Fuehrungsforschung miteinander verknuepft werden, wurde ein Instrument zur Erfassung gesundheits- und entwicklungsfoeerlichen Fuehrungsverhaltens entwickelt und in einer empirischen Studie ueberprueft. Insgesamt 1278 Beschaeftigte wurden mit der neu entwickelten "Gesundheits- und Entwicklungsfoeerlichen Fuehrungsverhaltens-Analyse" (GEFA) zum Verhalten ihres direkten Vorgesetzten befragt. Zudem wurden das transformationale Fuehrungsverhalten und Indikatoren fuer die Gesundheit der Mitarbeiter erhoben. Es konnten gesundheitsrelevante Verhaltensweisen der Fuehrungskraefte identifiziert und differenzierte Erkenntnisse ueber das Zusammenspiel zwischen Fuehrung und Gesundheit der Beschaeftigten gewonnen werden. Ferner konnte gezeigt werden, dass die GEFA saemtliche Befindensindikatoren besser vorhersagt als die transformationale Fuehrung. Aus den ermittelten Zusammenhaengen wird ein Modell gesundheits- und entwicklungsfoeerlicher Fuehrung entwickelt. Zudem werden Ansatzpunkte fuer fuehrungsbezogene Gesundheitsfoerderungsmassnahmen abgeleitet, bei denen die Fuehrungskraft als (Mit-)Gestalterin der Arbeitsaufgaben und Arbeitsbedingungen im Fokus steht. Gibt es einen Zusammenhang zwischen Bewegungsaktivität und psychischem Befinden...	Andreas Schwerdtfeger, Ragna Eberhardt, Andrea Chmitorz	Literatur-nachweis	2008				Studienziel	Es wird gezeigt, wie mit Hilfe der Technik des ambulanten Monitoring gesundheitspsychologische Fragestellungen im Alltag untersucht werden koennen. Analysiert wurde der Zusammenhang zwischen koerperlicher Aktivitaet und Wohlbefinden im Alltag. Mit Hilfe von Beschleunigungssensoren wurden Bewegungsdaten ueber einen Zeitraum von zwolf Stunden bei 124 Probanden zwischen 18 und 73 Jahren aufgezeichnet. Energetische Aktiviertheit/positiver Affekt (EA/PA) und Anspannung/negativer Affekt (WA/NA) wurden etwa stuenndlich mittels Pocketcomputer erfasst. Die Daten wurden mit Mehrebenenmodellen ausgewertet. Bewegungsepisoden, die vor der Befindensabfrage auftraten, waren positiv mit EA/PA assoziiert. Zusammenhaenge mit WA/NA wurden hingegen nicht beobachtet. Zudem waren der Body Mass Index (BMI) und EA/PA negativ miteinander assoziiert, wobei dieser Zusammenhang sich allem bei den Maennern zeigte. Mit zunehmendem BMI stieg der Zusammenhang zwischen Bewegung und EA/PA an. Die Ergebnisse werden als Hinweis darauf betrachtet, dass die Untersuchung gesundheitspsychologischer Fragestellungen im Feld viel versprechend ist und dass sie die Befunde bisheriger Untersuchungen erweitern. Health and productivity management in Europe	Wolf Kirsten	Journals	2008	International Journal of Workplace Health Management		1	2	Studiendesign	Purpose – This paper aims to provide an overview of the major health-related challenges facing the European workplace and a summary of emerging research in the workplace health management field. Specific health and productivity strategies and outcome variables are also discussed. Design/methodology/approach – Numerous current resources were used in order to craft a comprehensive overview: European Union and World Health Organization statistics, surveys and research briefs, research studies, technical reports, political briefs and green papers, scientific theories and models, internal corporate reports and personal interviews. Findings – While a growing number of studies and programs are addressing the mounting workplace health challenges in Europe, only a small number of initiatives are systematic and evaluated. The case for enhanced data collection and integrated programs targeting lifestyles as well as the psychosocial working environment with productivity as an outcome variable is made. Two key strengths of the field in Europe are a salutogenic approach focusing on health potential and the social capital concept. Originality/value – The paper provides a unique interdisciplinary perspective and a current review of health and productivity management in Europe. The article presents information on the Right Fit program of Walt Disney Co. theme parks. The entry notes that Right Fit is an occupational health and safety program that aims to provide a magical experience for visitors of Disneyland and California Adventure. The section cites that the program is designed to enhance clinical and return-to-work outcomes through jobs that challenge structural issues and ergonomics in unusual environments. Right Fit has helped reduce musculo-skeletal injury claims by 8% and lessened lost workdays by 23%.	Emerald

Health and Safety Management within Small- and Medium-Sized Enterprises (SMEs) in Developing Countries: Study of Contextual Influences	Nongiba A. Kheni, Alistair G.F. Gibb, Andrew R.J. Dainty	Journals	2010	Journal of Construction Engineering & Management	136	10	Studienziel	Considerable attention has been focused on addressing construction health and safety risks in developed economies. Sadly, the same cannot be said of developing countries in Sub-Saharan Africa where accident figures are extremely high. The aim of this study is to examine the influence of the contextual environment within which Ghanaian construction small- and medium-sized enterprises (SMEs) manage occupational health and safety (OH&S). A questionnaire survey was administered to construction SMEs to better understand the health and safety management practices and associated problems followed up by field interviews to explore key issues identified by the survey. The results of the study highlight the institutional structure for implementing OH&S standards, prevailing economic climate, and extended family culture as challenges to the management of OH&S. The study identifies low literacy levels, low socioeconomic status of workers, owner/managers' ignorance of their OH&S responsibilities, commitment to extended family obligations, and ineffective OH&S administration as key factors limiting the capacity of construction SMEs to manage OH&S effectively. The study concludes that effective institutional structure and an enabling socioeconomic environment are needed to enhance the OH&S performance of SMEs and advocates for more proactive OH&S management that take into consideration the work cultures of SMEs.	EBSCO	
Health and Safety Through Leadership		Periodical	2005	Canadian Manager	30	3	Studiendesign	The article offers advice on how to achieve industrial health and safety through proper leadership. There are four key safety elements of a workplace health and safety program. Just like any other business activity, health and safety requires leadership and commitment from management. Managers should understand that managing health and safety is most effective when it is integrated into the core functions of the business.	EBSCO	
Health and wellness garners attention from Sam's new leadership		Journals	2009	Drug Store News	31	15	Studiendesign	The article reports that health and wellness businesses have been targeted for growth by a new senior leadership team at Sam's Club. The increased emphasis on traditional drug store categories is one element of a new merchandising strategy. Sam's president, Brian Cornell and its head merchant, Linda Heffner are overseeing a re-assorting of the product mix that involves increased space being allocated to such categories as health and wellness and fresh categories like meat, bakery and produce. Health Benefits Management: Tactics Matter	Randall K. Abbott	Periodical	2011	Journal of Compensation & Benefits	27	6	Studiendesign	The article discusses the key questions employers need to ask and the tactics needed to address them. It states that the question of who the employers should cover and subsidize may be answered by the employer based on workforce size, costs and employee proposition involved. Optimizing health plan performance will reportedly be crucial as employer plan sponsors strive to beat annual cost trends and keep plans affordable to members.	EBSCO	
health effects on leadres and co-workers of an art-based leadership development program	J Romanowska, G Larsson, M Erisson, BM Wikström, H Westerlung, T Theorell	Journals	2011	Psychother Psychosom	80	2	-	There are very few evaluations of the effectiveness of leadership development programs. The purpose of the study was to examine whether an art-based leadership program may have a more beneficial effect than a conventional one on leaders' and their corresponding subordinates' mental and biological stress. METHODS: Participating leaders were randomized to 2 year-long leadership programs, 1 art-based and 1 conventional, with follow-up of the leaders and their subordinates at 12 and 18 months. The art-based program built on an experimental theatre form, a collage of literary text and music, followed by writing and discussions focused on existential and ethical problems. RESULTS: After 18 months a pattern was clearly visible with advantage for the art-based group. In the art group (leaders and their subordinates together as well as for subordinates only) compared to the conventional group, there was a significant improvement of mental health, covert coping and performance-based self-esteem as well as significantly less winter/fall deterioration in the serum concentration of the regenerative/anabolic hormone dehydroepiandrosterone-sulfate. CONCLUSIONS: Our findings indicate a more beneficial long-term health effect of the art-based intervention compared to a conventional approach. Positive results for both standardized questionnaires and biological parameters strengthened the findings. The study provides a rationale for further evaluation of the effectiveness of this alternative educational approach.	PubMed

Health leadership and management competencies: a systemic approach	R Holder, C Ranagem	Journals	2012	World Hospitals and Health Services	48	3	Studienziel	The achievement of national and international health goals requires better-performing health systems. Strengthening leadership and management of health systems thus becomes essential for achieving greater efficiency and responsiveness, ultimately improving health outcomes. Building a global framework of core competencies for leadership and management needs to be approached with systems thinking and methodologies akin to complexity science that takes into account all components and levels of the health system and the possible interactions between them that influence outcomes. The results will have important policy implications for national health authorities seeking to strengthen management capacity and building transformational leadership in health systems. Health leadership in sub-Saharan Africa	AD Harries, EJ Schouten, A Ben-Smith, R Zachariah, S Phiri, WO Sungala, A Jahn	Journals	2009	Trop Doct.	39	4	Studiendesign	It is clear that with the current rate of progress sub-Saharan Africa will not achieve any of the health Millennium Development Goals by 2015. All key health indicators are at worse levels than in any other developing region. The problem is undoubtedly multi-factorial, with many solutions tabled, including the need for strong and effective leadership. Here, we present our opinion about the current state of health leadership in Africa and how it could be improved. We look at the defining qualities of some historic and contemporary leaders and discuss how these could be adapted to lead Africa out of its current health problems.	PubMed
Health Literacy and Health Actions: A Review and a Framework form Health Psychology	Christian von Wagner, Andrew Steptoe, Michael S Wolf, Jane Wardle	Journals	2009	Health Education & Behavior			Studiendesign	The association between performance on health literacy measures and health outcomes is well established. The next step is to understand the processes through which health literacy affects health. This review introduces a framework drawing on ideas from health psychology and proposing that associations between health literacy and health outcomes could be mediated by a range of health actions involving access and use of health care, patient-provider interactions, and the management of health and illness. The framework outlines routes through which health literacy might affect either health actions themselves or the motivational and volitional determinants that have been identified in social cognition models. The implications of the framework for future research and intervention strategies are discussed.	ERIC
Health Management	John Jesitus	Periodical	2007	Managed Healthcare Executive	17	10	Studienziel	The article reports on the extension of durable medical equipment (DME) in managed care organizations (MCOs) in the U.S. Medical Mutual of Ohio company allows its patients to rent hospital beds and wheelchairs to be reimbursed by the policy. Blue Shield of California company offers plans for prosthetic an orthotic devices with modified copayment and deductibles.	EBSCO
Health management	Sammy Rubin	Periodical	2007	Money Marketing			Studienziel	The article focuses on the issues related to health care management in Great Britain. Various research had been conducted on how to do just about everything from living a healthier life finding the right mortgage. The World Cancer Research Fund has released its Expert Report with a list of recommendations on the prevention of cancer. Furthermore, the protection industry needs information on insurance products that aims to simplify health matters.	EBSCO
Health Management acquired		News	2013	Investor's business daily			Studienziel	The U.S. hospital chain is being purchased by Community Health Systems ([STOCK CYH]) for \$13.78 per share, or \$3.9 bil, as Community Health looks to expand before the health care system overhaul. Both operate hospitals in small cities and rural areas and the Health Management ([STOCK HMA]) buyout will help Community Health expand its presence in the South, especially in Fla. Community Health shares fell 3.5% to 45.58.	EBSCO
Health Management as a Serious Business Strategy	DW Edington	Artikel	2007	Presentation at the World Research Group			Studienziel	Trend 90%-95% participation and 75% to 85% low-risk Keep the healthy people healthy Don't get worse StrategyNext Generation Program to drive ObjectivePartners: health plans; benefit consultants; primary care physicians; pharmaceutical companies; health enhancement companies Leadership includes two tasks within public administration: leading employees by creating healthy working conditions and being led by others. The basis of leading others in a healthy way means dealing with oneself in a healthy manner; this includes typical healthy behavior (i.e., physical activity, improved nutrition, not smoking), which allows for recovery by a good work-life balance and a sensitive dealing with one's own limits. Given these conditions of healthy self care, managers are able to act as role models and lead their employees in a healthy manner. Leading in a healthy manner means showing appreciation, being interested in the employees ("caring"), integrating them in decision-making, allowing transparency, improving the working atmosphere, and finally reducing stress and increasing resources. The latter includes social support, which decreases the danger of employees burning out. The article presents the concept of a 2-day training that is designed for managers in order to raise their awareness for duties related to health management in public administration.	Google Scholar

Health management as strategic behaviour	Ian Greener	Journals	2005	Public Management Review	7	1	Studienziel	This article presents an analysis of health management based on interviews with senior NHS managers in a number of Hospital Trusts between 2001 and 2003 as a part of an ongoing study to investigate the implementation of the NHS Plan (Secretary of State for Health 2000). The article examines managerial behaviour concerned with two of the most significant reforms under New Labour; first, the changes in relationship between managers and senior clinicians in the NHS; and second, the strategies employed by managers in dealing with the new performance measurement regime. It concludes by suggesting that much that occurs in manager - doctor relations is obscured by the two groups' practices, that there are gendered differences in the behaviours of managers towards clinicians and that game-playing behaviour in relation to the performance management regime is a function of its imposition upon the managers interviewed. Health management in small and medium-sized enterprises: results of a representative survey	RC Zelfel, T Alles, A Weber	Journals	2011	Gesundheitswesen	73	8-9	Studienziel	The prevalence of workplace health promotion in small and medium-sized enterprises (SME) in Germany as well as age management were investigated. METHODS: Representative data were collected by computer assisted telephone interviews in 1 441 SME (1-250 employees) in 7 regions of Germany. RESULTS: One-third of the SME have a system of health promotion. Disability management is known only in one third of the enterprises, another third of them knew the legal obligations. About half of the enterprises have a system to collect data about health-related absenteeism in business. Effects caused by the demographic change in Germany are feared by nearly 50% of the enterprises, but only 20% have taken action against it. The implementation of work health promotion is higher in enterprises with more employees. CONCLUSION: The study shows that workplace health promotion (WHP) in German small and medium-sized enterprises is not yet installed to a wide extent. The smaller the enterprises the less WHP is found. The results are verified by similar studies. Small and medium-sized enterprises have a need for consultation in cases of illness or health prevention. But there is not yet an organised structure available for getting advice. The study is the basis for a national project "Gesunde Arbeit", which will establish these consulting structures.	PubMed

Health management in the context of personnel and organizational development	Kathrin Heinitz, Detlev Liepmann	Literatur-nachweis		2008 Psychology in organizations			Studienziel	Discusses health management in the context of personnel and organizational development, outlining the difficulties of establishing a basis for health management and offering suggestions on how to approach the matter. In particular, the authors discuss (1) the assessment phase, suggesting strategic considerations for developing a theoretically and methodologically oriented health management, (2) early education systems as a component of deficit analyses, outlining the process of strategic early education, and (3) health management and quality assurance. It is pointed out that an analysis of the desires, requirements, and expectations of the members of the organization which is striving to provide satisfactory health management is a necessary facet in the developing stages of health management. Health management of Italian workers abroad	P Bianco, V Nicosia, R Ieraci, V Anzelmo	Journals	2011	G Ital Med Lav Ergon	33	3	Studienziel	In the last 20 years traveling workers abroad have increased markedly. This resulted in the need for standardized preventive tools available to protect workers-travelers in geographic areas with related additional risk factors. Health surveillance of these workers require a company organization that involves the components of the process prior: the occupational physician, safety service, administrative areas, travel clinic. The application phases of medical surveillance must be differentiated into two main phases: 1. pre-travel, in which successive stages also encoded by the SIMLII guidelines; 2. the return journey, where the paths are different for asymptomatic and symptomatic workers. The evaluation of fitness to perform the job abroad is based on general criteria that allow to correlate the health of the worker with respect to the destination area. The application methods actually available allow modulations of the health surveillance for companies of different dimension.	PubMed
Health management of Saipem workers with projects involving abroad activities	V Nicosia, S De Sanctis, F Mika, M Consentino, G Mascheroni	Journals	2007	G Ital Med Lav Ergon	29	3	Studienziel	In remote areas and in developing countries, where adequate health-care structures are few and sparse, Occupational Medicine contributes to guaranteeing workers' health. Companies like Saipem, involved in activities that are carried out in remote, inhospitable areas must ensure the safety and guarantee the health conditions of workers in relation to the risk factors connected with the job as well as with the environment in which it is performed. In such situations, Occupational Medicine addresses both the health aspects of the workplace and of the community, and is the pivot around which revolves the health-care support of workers employed abroad in the sense of protection and enhancement of health. The risks connected with work abroad are of three main types: 1) job-related risks; 2) risks connected with the environment; 3) risks related to the organization of work and the changes in the worker's daily life. The job-related risks are similar to those connected with analogous jobs performed elsewhere. The risks connected with the environment are related to adverse climatic conditions, extreme temperatures and unknown and often dangerous flora and fauna. The occupational physician is called upon to assess the suitability of workers for jobs that are based in remote areas. The main clinical conditions that can prevent issue of the Medical Fitness Certificate to workers for long-stay jobs abroad are discussed.	PubMed
Health Management Payback		Periodical	2006	Controller's Report	2006	9	Studienziel	The article discusses the survey results, which found out that most controllers are at companies that neither track nor measure the financial payback of their wellness or disease management programs. According to the survey, 71% of companies have not measured the financial effectiveness of these programs. Also, it revealed that the respondents that have realized cost savings from health management programs place the savings in one through five percent range.	EBSCO
Health Management Programs Cut Costs, Raise Productivity (cover story)		Periodical	2006	Managing Benefits Plan	6	12	Studiendesign	The article focuses on the report that health management has been considered as one of the most promising cost-containment strategies available to employers in the U.S. Many employers take investments to foster employee health as a way to lower spending on medical benefits and disability programs. For a growing capital preservation through a mix of equity and fixed income exposures has offered through investment alternatives available under the plan.	EBSCO
Health Management Programs: The Next Wave in Restraining Benefits Costs		Periodical	2008	Managing Benefits Plan	8	10	Studiendesign	The article presents the result of a survey by Hewitt titled "Two Roads Diverged," stating that 88 percent of its 58 respondents plan to make significant investments in the next three to five years aimed at enhancing their employees' health and productivity. It mentions that increased cost-sharing and tiered prescription drug offerings are being used by benefit managers to restrain increases in health benefits costs.	EBSCO

Health promoting leadership - Different views of the concept	Robin I. Studnyk, Andrea Eriksson, Runo Axelsson, Susanna Bihari Axelsson	Journals	2011	Work	40	1	-	Objective: To describe and analyse different views of health promoting leadership among actors involved in workplace health promotion in eight Swedish municipalities. Methods: Twenty individuals were interviewed and their views were analysed according to the methodology of phenomenograpic research, exploring how health promoting leadership was described, what motives were expressed, and what critical conditions were perceived for developing such leadership. Results: The informants described health promoting leadership in three ways: organising health promoting activities, having a supportive leadership style, and developing a health promoting workplace. The motives mentioned for developing health promoting leadership were instrumental motives and improved health. The critical conditions for health promoting leadership were organisational conditions, characteristics of individual managers, and support to managers. Conclusions: It seems that the concept of health promoting leadership was often used to link ideas about good leadership to the health of employees. Organisational goals and management trends may also have influenced the motives as well as the conditions for development of health promoting leadership.	EBSCO
Health promotion leadership: The mediating role of an organizational health culture	Jochen Gurt, Gabriele Elke	Literatur-nachweis	2010				-	Investigated the effects of leadership on an organizational health (OH) culture and employee strain. Empirical data from a longitudinal study in the German tax administration is presented. 265 employees from 4 tax offices of the German tax administration in North Rhine-Westphalia anonymously answered online survey questions over a 2-week period with a 6-month interval between 2 sampling points. Survey measures were drawn from a short version of the Organizational Health and Safety (OHS) questionnaire which follows the Job Demands-Resources Model and addresses 3 different areas: demands, individual resources of the employee, and external resources provided by the organizations, including leadership performance and assessment of OH culture. Leadership behavior was measured in terms of general healthy leadership behaviors and the engagement in health promotion of the leader. Results demonstrated the importance of leadership for the development of a proactive corporate health culture as well as the positive effect of health culture on employee strain level. Leadership had a positive impact on the development of a corporate health culture, which in turn reduced employees' strain level. The authors discussed the similarities of health and safety leadership regarding effects and mediating processes.	WISO

Health psychology: Continuity and change	Robert M Kaplan	Journals	2007	Health Psychology	26	2	Studiendesign	This issue of Health Psychology marks a transition in editorship. I assumed the role as editor-in-chief for Health Psychology on January 1, 2005. However, editorial transitions typically require some time to clear the backlog of articles accepted by the previous editor. Because this is one of the first issue including articles accepted by the current editorial board, we now take the opportunity to outline some of the new directions that we have planned. Our overall goal is to increase the impact of the journal on theory, research, and practice relevant to health and behavior. To accomplish this goal, we want to publish the highest quality science. Although psychologists remain the most common authors for Health Psychology, we encourage articles from multidisciplinary teams and from authors in other disciplines. Health psychology: What Will the Future bring?	Francis J Keefe, James A Blumenthal	Journals	2004	Health Psychology	23	2	Studiendesign	This commentary highlights several important themes and trends in this series of articles focusing on the future of health psychology. First, the challenges posed by changes in populations will only be met if health psychologists can develop a contextual competency. Second, with increasing evidence for the efficacy of health psychology interventions comes heightened interest in testing the effectiveness of these interventions. Third, issues of cost-effectiveness of health psychology will become increasingly important. Fourth, the growing integration of technological advances (e.g., telehealth, the Internet) into health psychology has major implications. Finally, the numerous changes outlined in this series of articles will demand that health psychologists extend and refine their theoretical models including the biopsychosocial model. Health Risk Management: Well-Being for the Employee and the Bottom Line	Camille Haltom	Journals	2005	2005 Thrid Quarter	21	3	Studienziel	For most employers, a small percent of the employee/participant population accounts for a large percent of health care costs. However, the population of this high-cost group changes from year to year. The fundamental problem is keeping employees out of the high-risk/high-cost segment, something plan design changes cannot address but that integrated health risk management (IHRM) can help achieve. This article explains how employers can implement an IHRM program to significantly lower health care costs to a degree unattainable through traditional cost-control strategies, while simultaneously raising workers' productivity and well-being.	EBSCO
Health sector leadership in mitigating climate change: experience from the UK and NSW	D Pencheon, CE Rissel, G Hadfield, DL Madden	Journals	2009	N S W Public Health Bull	20	11-12	Studienziel	The threat to human health from climate change means that all levels of government and private and public agencies will need to change their current practices to reduce carbon emissions. The health sector will also need to respond and change practice. The National Health Service in the United Kingdom is developing a systematic and strategic approach to reduce its carbon footprint, as described in the recently released NHS Carbon Reduction Strategy for England. The work is being led by the Service's new Sustainable Development Unit. While the Australian health care system has not yet embraced a shared vision for carbon reduction, there are examples emerging of how the sector is contributing to reduce greenhouse gas production. Examples from two NSW area health services to reduce energy use and promote active transport are presented. In both countries, these changes are supported by new legislation and policy.	PubMed

Health: A Workplace Leadership Issue for the 21st Century	Brian Duggan	Journals	2010	Canadian Manager	35	4	keine Organisation	The article discusses how employee health affects the success of businesses in Canada during the 21st century. The author mentions that the costs of healthcare services are improving and these consume a great proportion of the provincial budgets in the country. According to him, it is important that managers offer regular education sessions on health issues to employees as well as promote a smoke-free workplace.	EBSCO
Health-specific leadership: Is there an association between leader consideration for the health of employees and their strain and well-being?	Jochen Gurt, Christian Schwennen, Gabriele Elke	Journals	2011	Work & Stress	25	2	-	The aim of this study is to examine the concept of health-specific leadership, differentiate it from sound general leadership and identify whether it has an impact on employee strain, alongside general sound leadership practices. Health-specific leadership is conceptualized as the leader's explicit consideration of and engagement in employee health. The study is based on research in the field of leadership impact on employee strain, health and well-being, extended by recent findings of the importance of domain-specific leadership constructs. As indicated by previous relevant studies, we include psychological climate for health, role ambiguity and job satisfaction as mediating variables. Using structural equation modelling, a sample of 1027 employees of the German tax administration was examined. The results show differential effects for health-specific and general sound leadership. While neither of these two aspects of leadership exhibited a direct association with employee strain, general sound leadership practices were significantly related to lower employee strain through lower levels of role ambiguity, better psychological climate for health and higher job satisfaction. Health-specific leadership was associated with higher levels of psychological climate for health, but also higher role ambiguity.	EBSCO
Herausragende gesundheitspsychologische Programme	Julia Schamhorst	Literatur-nachweis	2005				Studienziel	Es werden einige internationale Programme zur Gesundheitsfoerderung vorgestellt, in die auch gesundheitspsychologische Ansätze in beispielhafter Weise eingearbeitet wurden. Moreover, it reveals that 66% of organizations with strong cultural support and leadership reported improvements in health risks.	EBSCO
How and for whom? Mediation and moderation in health psychology	David P Mac Kinnon, Linda J Luecken	Journals	2008	Health Psychology	27	2	Studienziel	As the field of health psychology matures, there is corresponding growth in attention to the underlying causal mechanisms and processes by which psychosocial factors influence health. An important direction in the field of health psychology involves acknowledgment and investigation of individual differences in the relations among biological, psychological, behavioral, and social factors. It is commonly found in medical and psychological research that one size does not fit all, whether investigating response to an intervention, perceptions of stress, or the influence of a personality trait on cardiovascular health. Research questions that ask how, when, for whom, which, and under what conditions require attention to additional ("third") variables that can explain how two variables are related. Mediation and moderation are two examples of this detailed examination of relations between variables. From a methodological standpoint, investigation of mediation and moderation represents how a third variable may be incorporated in statistical analyses to uncover underlying mechanisms, differing effects on unique populations, or conditions under which an effect may be pronounced or diminished. Often the addition of these measures to research projects costs very little, but offers tremendous potential to yield detailed information critical to the advancement of theory and practice in health psychology. Human resource leadership: the key to improved results in health	ML O'Neil	Journals	2008	Hum Resour Health			Studienziel	This article is the lead article in the Human Resources for Health journal's first quarterly feature. The series of seven articles has been contributed by Management Sciences for Health (MSH) under the theme of leadership and management in public health and will be published article by article over the next few weeks. The journal has invited Dr Manuel M. Dayrit, Director of the WHO Department of Human Resources for Health and former Minister of Health for the Philippines to launch the feature with an opening editorial to be found in the journal's blog. This opening article describes the human resource challenges that managers around the world report and analyses why solutions often fail to be implemented. Despite rising attention to the acute shortage of health care workers, solutions to the human resource (HR) crisis are difficult to achieve, especially in the poorest countries. Although we are aware of the issues and have developed HR strategies, the problem is that some old systems of leading and managing human resources for health do not work in today's context. The Leadership Development Program (LDP) is grounded on the belief that good leadership and management can be learned and practiced at all levels. The case studies in this issue were chosen to illustrate results from using the LDP at different levels of the health sector. The LDP makes a profound difference in health managers' attitudes towards their work. Rather than feeling defeated by a workplace climate that lacks motivation, hope, and commitment to change, people report that they are mobilized to take action to change the status quo. The lesson is that without this capacity at all levels, global policy and national HR strategies will fail to make a difference.	PubMed

In Search of Capable Health Managers: what is distinctive about health management and why does it matter?	D.S. Briggs, A. Snyth, J.A. Anderson	Journals	2012	Asia Pacific Journal of Health Management	7	2	Studiendesign	There is no widespread agreement as to a definitive way to describe, let alone define the health manager's role and required capabilities. This is despite the fact that they have unique roles and are engaged in complex, professionally dominated, politically driven systems experiencing constant change. The role is highly variable and management roles, given this variability, cannot be easily described or codified. Attempts at codifying the role are often focused on competencies required but this article argues that capabilities of the health management role have a higher order of importance in defining and codifying the role. In the focus on capabilities, the context of health systems, its complexity, the uniqueness of the health management role and its distinguishing characteristics are described. The potential for focusing on the utility of capability frameworks is addressed as a means to suggest challenges the authors describe, as being required to be debated if we are to advance the education, training and professional development of health service managers in their leadership roles. The authors leave the reader with some challenging practicebased research questions and invite their responses	EBSCO
Individual and organizational health-oriented readiness for change: Conceptionalization and validation of a measure within a large-scale comprehensive stress management intervention		Journals	2012	International Journal of Workplace Health Management	5	3	Studienziel	Purpose – A key prerequisite for successful change in organizations is to understand and develop the readiness for change of employees and of their organization. In order to appropriately manage occupational and organizational health interventions, this paper aims to develop a health-specific survey-based measure assessing individual- and organizational-level health-oriented readiness for change. Design/methodology/approach – A comprehensive longitudinal stress management intervention study in nine medium and large enterprises in Switzerland (n=3,703) formed the basis for subsequent validity and reliability analyses of the individual and organizational health-oriented readiness for change measure. Findings – The results show that health-oriented readiness for change is a valid instrument for assessing the two subcomponents of current behavior and change commitment, both for the individual and organization as agents of change. Originality/value – The change-specific health-oriented aspect, including the individual and the organization as agents of change seems to be plausible for a comprehensive assessment of employees' readiness for change in health-promoting change initiatives in organizations. Individuelle und organisatorische Resilienz als Komponente eines ganzheitlichen Leistungs- ...	Michael Kastner	Literatur-nachweis	2010				Studienziel	Unter besonderer Berücksichtigung der aktuell steigenden Anzahlen psychischer Beeinträchtigungen (Burn-out, Depression) auf individueller Ebene der Arbeitnehmer sowie Insolvenzen und Arbeitsplatzverluste auf organisatorischer Ebene wird das Konzept der Resilienz als Faktor eines ganzheitlichen Leistungs- und Gesundheitsmanagements thematisiert. Vor dem Hintergrund, das Konzept der Resilienz sowohl auf das Individuum als auch auf die Organisation zu übertragen (individuelle und kollektive Resilienz) werden einführungd Facetten einer resilienten Person beschrieben: (1) die Fachigkeit eigene Gedanken, Gefühle und Absichten klar zu artikulieren sowie respektvoll durchzusetzen, (2) Achtsamkeit als adäquater Bezug zu sich selber sowie eine klare Selbstwahrnehmung, (3) Zielklarheit und Prozessoffenheit; Kenntnis eigener Emotionen und Konflikte sowie gelassener Umgang mit ihnen, (4) ständiges Aktualisieren des individuellen Wissens und Kneupfen neuer Beziehungsnetze, (5) soziale Unterstützung als starker Stressreduktionsfaktor, (6) Flexibilität (Akkommodation und Assimilation), (7) Wiederaufstellungsfähigkeit (Disziplin und Beharrlichkeit). Ebenfalls wird darauf eingegangen wie sich diese Aspekte nuetzlich auswirken und welche von ihnen in Grenzen erlernt werden koennen. Anhand dieser Faktoren koennte man eine organisationale Resilienz klassifizieren. Die Relevanz des Aspekts des synegoistischen Verhaltens (Schaffung von Win-Win-Situationen), wodurch am ehesten organisationale Resilienz erreicht werden kann, wird thematisiert. Abschliessend wird darauf verwiesen, dass eine Untersuchung zum Zusammenhang von organisationaler und individueller Resilienz sowie eine Analyse, wie dabei der Synegoismus wirkt und wie organisationale und individuelle Resilienz optimierbar sind, interessant sein koennte. Information support for health management in regional Sri Lanka: health manager's perspective	KI Ranasinghe, T Chan, P Yalagadda	Journals	2012	HIM J			Studienziel	Good management, supported by accurate, timely and reliable health information, is vital for increasing the effectiveness of Health Information Systems (HIS). When it comes to managing the under-resourced health systems of developing countries, information-based decision making is particularly important. This paper reports findings of a self-report survey that investigated perceptions of local health managers (HMs) of their own regional HIS in Sri Lanka. Data were collected through a validated, pre-tested postal questionnaire, and distributed among a selected group of HMs to elicit their perceptions of the current HIS in relation to information generation, acquisition and use, required reforms to the information system and application of information and communication technology (ICT). Results based on descriptive statistics indicated that the regional HIS was poorly organised and in need of reform; that management support for the system was unsatisfactory in terms of relevance, accuracy, timeliness and accessibility; that political pressure and community and donor requests took precedence over vital health information when management decisions were made; and use of ICT was unsatisfactory. HIS strengths included user-friendly paper formats, a centralised planning system and an efficient disease notification system; weaknesses were lack of comprehensiveness, inaccuracy, and lack of a feedback system. Responses of participants indicated that HIS would be improved by adopting an internationally accepted framework and introducing ICT applications. Perceived barriers to such improvements were high initial cost of educating staff to improve computer literacy, introduction of ICTs, and HIS restructure. We concluded that the regional HIS of Central Province, Sri Lanka had failed to provide much-needed information support to HMs. These findings are consistent with similar research in other developing countries and reinforce the need for further research to verify causes of poor performance and to design strategic reforms to improve HIS in regional Sri Lanka. Inquiry in health knowledge management	James Sheffield	Journals	2008	Journal of Knowledge Management		12	4 Studienziel	Purpose – The purpose of this paper is to reduce ambiguity in diverse approaches to health knowledge management by surfacing key issues, perspectives and philosophical assumptions. Design/methodology/approach – Knowledge management research in health is critically reviewed. Issues are grouped into research domains, and examined in the light of associated knowledge management perspectives, and philosophical assumptions. Findings – Systemic complexity in health knowledge management derives from tensions within and between issues in three domains: specific value-laden aspects of clinic practice (knowledge creation); integration of workplace practice into generic process flows (knowledge normalization); and the technical integration of disparate information systems (knowledge application). These concepts are related to three knowledge management perspectives, viz., personal values, social norms and objective facts, respectively. Both domains and perspectives are anchored in philosophical assumptions about the interests served by knowledge (viz., emancipatory, practical, and technical), and in approaches to inquiry (critical pluralist, interpretivist, and positivist). Research limitations/implications – The findings are based on selected literature about Western health care practices Practical implications – The framework assists understanding of the practical reasoning that motivates the use of technology in health knowledge management. The conceptual linkages that are developed are of value to practitioners and researchers sensitive to the intertwining of facts, norms and values. Originality/value – In total, the concepts and relations developed in this paper constitute both a framework for inquiry in health knowledge management, and a normative theory for a critique of patient care. Recognising, and articulating, the relative importance one ascribes to facts, norms, and values is crucial in tackling the hard problems in health knowledge management.	Emerald

Inspiring the future of mental health and addictions in New Zealand: The Blueprint Executives Leadership and Management Programmes	Sally Pitts-Brown, Janet Peters	Journals	2009	Innovation Journal	14	1	Studienziel	Fostering leadership among mental health staff is a key initiative for New Zealand. The Blueprint Executive Leadership and Management programme enables clinical leaders to learn alongside consumer leaders and specialist services managers. This paper describes the content and process of a national mental health leadership training programme that is managed with input from one of New Zealand's leading university management schools (the University of Waikato School of Management). Such a partnership allows the delivery of a highly credible, academic programme grounded in mental health sector insight thus supporting a key goal of fostering a culture of professional development. International Journal of Health Management		Journals	2010	International Journal of Workplace Health Management		3	2 Studiendesign	Editorial: Workplace health is becoming a major public health issue for employers and all levels of government. Furthermore, workplace health is also gaining momentum at an individual organizational level. Well planned, comprehensive workplace health programmes have been shown to be cost-effective, especially when the health promotion programmes are targeted and matched to the health problems of the specific employee population. Furthermore, studies have repeatedly demonstrated that workplace health programmes not only lower health care and insurance costs, but also decrease absenteeism, and improve performance and productivity. Workplaces are an important, yet under-utilized, setting for promoting health and wellbeing. Most people spend more than a third of their waking hours at work – large numbers of people can therefore be reached and encouraged to acquire the knowledge and skills to live a healthy lifestyle. International Journal of Workplace Health Management considers workplace health from both the wider public health perspective and the perspective of the individual organization. Workplace health and related issues are discussed in the context of three key guiding principles: 1. Individual health – to include primary prevention, behaviour modification, attitudes and lifestyle choice, health education, health promotion, and how to motivate people 2. Workplace culture – to include management policies and procedures, communication systems, training opportunities, and work-life balance, and the effect this has on morale and wellbeing 3. Physical work issues – to include musculoskeletal health/ ergonomics as well as health and safety legislation and occupational health, how effective policies are, and the level of compliance.	Emerald
International Journal of Health Management		Journals	2008	Journal of Health Organization and Management		22	5 Studiendesign	Editorial: The International Journal of Workplace Health Management publishes current research and debate on all aspects of health in the workplace, from both the wider public health perspective and the perspective of the individual organization. As the first scholarly journal in this evolving field, it is a unique resource which aims to disseminate high quality research with real relevance to practice.	Emerald
Introducing the new health psychology series "Evidence-based treatment reviews": Progress not perfection	Krina W Davidson, Kimberlee J Trudeau, Timothy W Smith	Journals	2006	Health Psychology	25	1	Studiendesign	Introduces the new Health Psychology series "Evidence-Based Treatment Reviews." Psychologists struggle continuously with the tension between the general implications of research conducted in their treatment area and the often evidence-based policy: Evidence-Based Psychology Practice (EBPP). This struggle is not new. Medicine, similarly, has been dealing with the issue of how to translate research findings into evidence-based assessments and treatments. The process of joining our research with our practice, known as Evidence-Based Medicine, will be the cornerstone of a new series of articles in Health Psychology, entitled "Evidence-Based Treatment Reviews." Evidence-Based Behavioral Medicine is an extension of the Evidence-Based Medicine movement that identified the necessity of critically evaluating research to inform clinical practice (Rosenberg & Donald, 1995). In addition to mentoring researchers in presenting their findings in a more user-friendly style (e.g., Consolidated Standards of Reporting Trials, or CONSORT, guidelines; Altman, Schulz, Moher, Egger, Davidoff, Elbourne, et al., 2001), teaching clinicians how to review the evidence (e.g., Evidence Based Medicine Tool Kit), and compiling and summarizing the existing evidence for public consumption (e.g., the Cochrane Collaboration), it makes sense to integrate these efforts by presenting research reviews with clinician commentary in our professional journals as has already been done by the Journal of the American Medical Association (JAMA, e.g., DeAngelis & Fontanarosa, 2002; Levinson & DeAngelis, 2002). We seek to add to the health psychology evidence base by including two articles for each topic chosen: an Evidence Review and a Clinician's Comment. For this series, we envision that three or four evidence-based reviews will be published per year in Health Psychology and that each review will be accompanied by a three- or four-page commentary by a clinician to aid in the application of the research to a clinical practice. In this format, we hope to capture both the state of the clinical science and the challenging art of translating it into clinical practice. Krank am Arbeitsplatz, Präsentismus	Paul Hemp	Literatur-nachweis	2005	Harvard Business Manager	27		Studienziel	Präsentismus - Beschäftigte kommen zur Arbeit, aber auf Grund von Krankheit oder anderen medizinischen Indikationen sind sie nicht voll einsatzfähig - scheint ein kostspieligeres Problem zu sein als sein bekanntes Gegenstück, der Absentismus. Präsentismus ist nicht immer aller erkennbar. Eine Hand voll Unternehmen haben das Problem des Präsentismus erkannt und versuchen, etwas dagegen zu tun. Dazu muss zunächst herausgefunden werden, wie verbreitet bestimmte Krankheiten und medizinische Probleme sind, die die Arbeitsleistung der Mitarbeiter schmälern. Präsentismus kann ein Firma teurer zu stehen kommen als andere gesundheitsbezogene Kosten. Präsentismusausgaben sind die auf Grund von krankheitsbedingten Produktivitätsverlusten verlorenen Gelder. Sie bilden mit 63 % oder fast 312 Millionen Dollar den größten Kostenblock bei einem im Beitrag dargestellten Fallbeispiel. Um das Problem zu reduzieren ist der erste Schritt, sich und den Managern das Problem bewusst zu machen. Im nächsten Schritt muss herausgefunden werden, welche Gesundheitsprobleme die Mitarbeiter im Einzelnen haben. Mitarbeiter sollten geschult werden, um sicherzustellen, dass Krankheiten nicht unerkannt bleiben, dass Mitarbeiter nicht ausreichend sensibilisiert sind, um ihr gesundheitliches Problem zu erkennen. Hilfreich ist es auch, die Mitarbeiter darin zu unterstützen, ihre Krankheiten besser in den Griff zu bekommen. Zwar fordert diese Vorgehensweise Investitionen in das Gesundheitswesen des Unternehmens. Studien belegen jedoch, dass sich derartige Investitionen schnell rentieren und die Gesundheitsausgaben des Unternehmens sinken.	WISO

Labor relations under decentralized health management and dilemmas in the relationship between work expansion and casualization in the Brazilian Unified National Health System	S Junqueira Tda, RM Cotta, RC Gomes, F Silveira Sde, R Siqueira-Batista, TM Pinheiro, RF Sampaio	Journals	2010	Cad Saude Publica	26	5	Studienziel	This article analyzes the logic behind human resources management in primary health care from the perspective of municipal health systems administrators in Brazil, rethinking the decentralization process based on mediation between Federal government guidelines and the health services' daily practice. This was a cross-sectional study using a semi-structured questionnaire applied to municipal health secretaries in the Southeastern Health Macro-Region (Minas Gerais State). The municipal health secretaries had a mean age of 39.4 years and low schooling, and a large proportion did not belong to the health field. As for the workforce in the Family Health Program, the municipal governments hired 93.3% of the health professionals, mostly on temporary contracts. The findings confirm gaps in the workers' political and social rights. Paradoxically, the government itself, through the municipal administration, is responsible for failing to comply with the prevailing labor legislation.	PubMed
Leaders as Attachment Figures: Leaders' Attachment Orientations Predict Leadership-Related Mental Representations and Followers' Performance and Mental Health	Rivka Davidovitz, Mario Mikulincer, Ronit Izsak, Phillip R. Shaver, Micha Popper	Journals	2007	Journal of Personality & Social Psychology	93	4	Studienziel	In 3 studies, the authors examined the contribution of leaders' attachment styles to their leadership motives and beliefs and to followers' outcomes. In Study 1, participants completed measures of attachment orientation, leadership motives, self-representations, and leadership style. Studies 2 and 3 were conducted within Israeli military units either during a leadership workshop or during intensive combat training. Israeli military officers and their soldiers (followers) reported on their attachment styles, and the soldiers reported on the officers' leadership qualities and on the soldiers' own performance and mental health. Leaders' attachment anxiety was associated with more self-serving leadership motives and with poorer leadership qualities in task-oriented situations. Leaders' attachment anxiety also predicted followers' poorer instrumental functioning. Leaders' attachment-related avoidance was negatively associated with prosocial motives to lead, with the failure to act as a security provider, and with followers' poorer socioemotional functioning and poorer long-range mental health. Results are discussed with respect to the value of attachment theory for the study of leadership. (PsycINFO Database Record (c) 2012 APA, all rights reserved)	PsycNet
Leadership and empowerment and equality: a proposed model for mental health user/survivor leadership	Mary O'Hagan	Journals	2009	International Journal of Leadership in Public Services		5	4 Studienziel	The leadership of people with lived experience of mental health problems is underdeveloped, when it comes to leadership in one's own recovery, at the service level, and at the systemic level. Unlike the mental health system, the user/survivor movement has a values base of empowerment and equality. But the movement has not yet created an explicit model of leadership based on these values. Conventional models of leadership have little to offer but critiques of it provide a good framework for users and survivors to build its own model of leadership upon. If user/survivor leadership is to thrive, new roles, practices and competencies need to be developed. At a deeper level, there needs to be philosophical, psychological and political shifts in service systems if user/survivor leadership is to ever take root. Furthermore, the leadership of empowerment and equality should pervade all the leadership in service systems and beyond.	Emerald
Leadership and management quality: key factors in effective health sysems	G Pfeffermann	Journals	2012	World Hosp Health	48	3	Studienziel	The effectiveness of health care systems in the developing world is related to the quality of their leadership and management, yet that factor has been neglected by academics and funders. Based on replicable existing models, the article proposes an approach to strengthening local management training institutions.	PubMed
Leadership as a predictor of stigma and practical barriers toward receiving mental health treatment: a multilevel approach	Thomas W Britt, Kathleen M Wright, DeWayne Moore	Journals	2012	Psychological Services	9	1	keine Organisation	The present research examined positive and negative leadership behaviors as predictors of stigma and practical barriers to mental health treatment. Soldiers completed measures of noncommissioned officer (NCO) and officer leadership, stigma, and practical barriers to getting mental health treatment at 2, 3, and 4 months following a 15-month deployment to Afghanistan. The results revealed that positive and negative NCO and officer leader behaviors were predictive of overall stigma and barriers to care (collapsed across the three time periods), with only NCO positive and negative behaviors being uniquely predictive of stigma when included in the same model with officer behaviors. In addition, negative and positive NCO leader behaviors were predictive of stigma within participants over the course of the three month time period, and positive NCO leader behaviors were inversely related to practical barriers to mental health treatment within participants across the same time period. The results are discussed in terms of how different leader behaviors may be linked to different factors influencing a soldier's decision to seek mental health treatment. (PsycINFO Database Record (c) 2012 APA, all rights reserved)	PsycNet
Leadership behaviour and health - current research state	S Gregersen, S Kuhner, A Zimmer, A Nienhaus	Journals	2011	Gesundheitswesen	73	1	Studiendesign	The link between leaders' behaviour and health has only recently been the focus of scientific research and the results which already exist on this topic have, to date, not been systematically evaluated or summarized. The objective of this article is to make an attempt to provide a summarised overview of the current state of research. Subject-related databases list 42 publications dealing with the relationship between leaders' behaviour and the state of health and well-being of their employees. The literature discusses leaders' behaviour as being both a stressor (source of stress) and a resource. The publications discussed here also provide the first empirical evidence on the influence of various leadership styles on the health of the employees. In particular, transformational and employee-orientated leadership are considered to be beneficial to health. But the question of how leaders' behaviour influences health has not been satisfactorily explained. In most of the publications included, a direct link was assumed and, in the majority of cases, confirmed empirically. In addition, it also appears that there may be an indirect influence which may be moderated or mediated by, e. g., working conditions or the personality of the individual. The relatively small number of research examinations into the influence of leaders' behaviour on the health and well-being of their staff shows that there is a need for additional research.	PubMed
Leadership boost retains the human touch: Caring and learning in a mental-health setting		Journals	2011	Development and Learning in Organization		25	2 Studiendesign	Purpose – Reviews the latest management developments across the globe and pinpoints practical implications from cutting-edge research and case studies. Design/methodology/approach – This briefing is prepared by an independent writer who adds their own impartial comments and places the articles in context. Findings – A work-based change orientated project was agreed between the participants and their line manager. This encouraged participants to seek out and use organizational resources. Inevitably this required people skills and political acuity. Risks and decision-making were also inherent to the project process. The leadership and management skills of the participants were exposed so that personal action development plans alongside coaching could assist with further learning. The authors believe that this program contributed towards improving organizational learning and performance by enhancing each participant's leadership (performance) effectiveness whilst also producing transformational change. Practical implications – Provides strategic insights and practical thinking that have influenced some of the world's leading organizations. Originality/value – The briefing saves busy executives and researchers hours of reading time by selecting only the very best, most pertinent information and presenting it in a condensed and easy-to-digest format.	Emerald
Leadership development as an intervention in occupational health psychology	Kevin E. Kelloway, Julian Barling	Journals	2010	Work & Stress	24	3	Studiendesign	A growing body of literature suggests that organizational leadership is linked to a wide variety of employee outcomes, both positive and negative, relevant to occupational health and safety. All organizations have individuals in a leadership role, but few researchers consider leadership training as an effective intervention. This may be because such studies are difficult to conduct and because the target, being the employees, is indirect. In this paper for the special edition of Work & Stress, we review studies linking leadership to individual well-being and safety in organizations. These include studies concerning leadership style, abusive supervision and organizational fairness. We highlight intervention studies that suggest that these linkages are causal and that leadership development, usually in the form of training, is an effective intervention in occupational health psychology. It is proposed that leadership development should be a main target for research on interventions in Occupational health psychology. The characteristics of leadership development interventions and directions for future research are discussed.	EBSCO
Leadership for empowerment and equality: A proposed model for mental health user / survivor leadership	M O'Hagan	Artikel	2009	International Journal of Leadership in Public			Studienziel	The leadership of people with lived experience of mental health problems is underdeveloped, when it comes to leadership in one's own recovery, at the service level, and at the systemic level. Leadership for health development in east Africa: A fresh approach	J Killewo, W Bazeyo, N Mock, ...	Artikel	2006	East African Journal of			Studienziel	Of all the world's regions, sub-Saharan Africa, including East Africa, is least likely to achieve the Millennium Development Goals as set by the United Nations at the Millennium Summit in 2000 (1, 2). This is because there are many challenges to reaching these goals that include the low levels of Official Development Assistance, inadequate private investments and insignificant financial contributions flowing into the region. However, this situation has recently changed with a massive infusion of resources to address poverty and disease control from both private and public international programs such as among others, the Global Fund, Gates Foundation, G-8 Africa Aid Package, Debt forgiveness, the United States Presidential Initiatives and the World Bank. Amidst this positive change, limited human resources, rather than funding constraint is now becoming the major obstacle to health development. The principal obstacle to all spheres of health development is therefore limited human capacity. The dynamics driving many of the continent's problems are sub-regional in nature, yet donor efforts are targeted at the country level. This situation renders country-level efforts in harnessing the resources to address subregional problems largely ineffective. Africa therefore needs strong regional coalitions to promote health initiatives, which span national borders. Building human capacity across borders should be part of such a strategic and coordinated regional strategy.	Google Scholar
Leadership for health improvement - implementation and evaluation	Susan M. Carr, Monique Lhussier, Joanna Reynolds, David J. Hunter, Catherine Hannaway	Journals	2009	Journal of Health Organization and Management		23	2 Studienziel	Purpose – The purpose of this paper is to present a co-authored reflection on the health improvement leadership development programme and the key evaluation messages derived from piloting in an English National Health Service region. It highlights the specific attributes of this approach to health improvement leadership development and clarifies health improvement development issues. Design/methodology/approach – Appreciative inquiry and soft systems methodology are combined in an evaluation approach designed to capture individual as well as organisation learning and how it impacts on leadership in specific contexts. Findings – The evaluation exposes the health improvement leadership needs of a multi-organisation cohort, offers some explanations for successful achievement of learning needs while also exposing of the challenges and paradoxes faced in this endeavour. Originality/value – There are limited reported templates of how to develop leadership for health improvement. This paper details a whole systems approach, acknowledging the impact of context on leadership and an approach to evaluating such complex initiatives.	Emerald

Leadership for Quality, Effectiveness and Health	J Larsson	Artikel	2010				-	Leadership, quality, effectiveness and health are important factors in the achievement of organisational success. Three questions are addressed to study these elements: 1. How do leadership values relate to leadership behaviours, quality methodologies and health in organisations? 2. How do leadership behaviours relate to effectiveness and health in organisations? 3. How can leadership tools be designed and used to promote health in organisations? The research is based on five studies from three research projects. This research is reported in five papers. Study I concerned eight organisations in the middle of Sweden; the focus was on leadership values and behaviours. Study II concerned three successful organisations that received the award, 'Sweden's number one workplace'. Focus in this study was mainly on leadership behaviours. Study III combined results from Studies I and II with a focus on successful leadership behaviours. Study IV concerned the eight organisations in Study I. A leadership tool in the form of a Plan-Do-Study-Act (PDSA) model was developed and evaluated. Study V was of two organisations in Sweden; the focus in that work was on the use of a leadership tool control chart designed to give managers statistically valid early warning signals about health in their organisations. Theory X and Y together with the three-dimensional leadership behaviour theory were used to assess leadership values and behaviours. The theory surrounding PDSA and control charts were used to develop leadership tools. The dimension of health is defined from a salutogenic humanistic perspective; which emphasizes individual well-being. The dimension of quality is defined as the ability to satisfy or exceed needs and expectations. Effectiveness is defined as the extent to which externally and internally defined objectives are fulfilled. Both qualitative and quantitative research methods were used. Interviews, seminars with employees, collection of human resource and effectiveness figures, and questionnaires completed by managers and subordinates were used to collect data. Managers with more Theory Y-oriented leadership values were rated by subordinates as high concerning quality methodologies and leadership behaviour dimensions. The subordinates of these managers tended to be healthier. Two of the studies identified common groups of leadership behaviours in effective and healthy organisations: strategy and vision, communication and information, authority and responsibility, learning culture, worker conversations, plainness and simplicity, humanity and trust, walking around and reflective personal leadership. These leadership behaviours fit into a leadership profile where all three of the dimensions of structure, relation and change are present. Of the three, the relation dimension is strongest and concluded to be a universal dimension. The developed PDSA model seems to be a leadership tool that influences both leadership values and behaviour, particularly in the area of relation-oriented leadership behaviours. An early warning system built on CUSUM- and Shewhartcharts concerning the health indicators of self-assessed general health and new sicknesses per employee was also found to be a powerful and usable leadership tool. For future research, the explorative research findings can be quantitatively tested using representative and preferably cross-national data, with a longitudinal design.	Google Scholar

Leadership in workplace health promotion projects: 1- and 2-year effects on long-term work attendance	L Deltve, K Skagert, R Vilhelmsson	Journals	2007	The European Journal of Public Health	5	47	-	Despite the acknowledged role of leadership in the psychosocial work environment, few studies focus on how leadership qualities and strategies may act as key processes of importance to positive effects of workplace health promotion (WHP). The aim of this study was to increase knowledge about how leadership qualities and strategies in WHP projects influence employees' long-term work attendance. METHOD: The 1- and 2-year effect of leadership on the prevalence of long-term work attendance among municipal human service workers (n = 3 275) was analysed using 3-year register-based data on sick leave, questionnaires and a qualitative categorization of each unit. RESULT: Increased leadership qualities, especially where leaders used rewards, recognition and respect, were associated with higher prevalence of work attendance at follow-up [PR 1.42 (1.20-1.69)]. Leaders' strategies and views on work-related health had a significant impact on increased work attendance in projects that had goals clearly focusing on changeable factors [1.36 (1.11-1.67)], in multi-focused projects [1.60 (1.24-2.04)] and in projects aimed to increase employees' awareness of their health. Workplace health promotion strategies with a single focus on strengthening individual, professional or organizational resources were negatively associated with work attendance. A higher proportion of employee work attendance was also seen in units whose leaders viewed the organization or the society (rather than individual workers) as responsible for the high rate of sick leave. CONCLUSION: Leadership, WHP strategies and leaders' attitudes towards employee work-related health have importance for implementation processes, as well as affecting employee work attendance. In this study, multi-focused WHP interventions had the largest effect on work attendance.	PubMed

Leadership needed to reduce inequalities in health		Journals	2009	Lancet	373	9676	Studiendesign	The authors express their opinion that governments must act to reduce inequalities in health. They refer to a seminar on May 7, 2009 organised by the London School of Economics in conjunction with the European Commission. The goal of the seminar was to debate the measurement of health inequalities in Europe and evaluate policies for reducing inequalities. The authors believe that the themes identified by the Commission on Social Determinants of Health remain valid until better data is available.	EBSCO
Leadership needs to shif system: three emerging perspectives to inform our way forward	RR Lindstrom	Journals	2013	Health Pap	13	1	Studienziel	Zimmerman et al. have brought to light a number of issues that lead to a collective failure in healthcare safety culture, and propose how to overcome them. Front-line ownership (FLO) is a great success story in that respect, acknowledging that much of the problem and, therefore, solution, relates to how, not what, approaches and solutions have been implemented. In service of the healthy dialogue the authors have invited, this commentary suggests that there needs to be a purposeful shift in leadership, not only in the important area of patient safety but more generally throughout the health system. Three emerging perspectives around leadership are briefly introduced that provide some insight into FLO's success - complexity leadership, neuroleadership and phronetic leadership. Together, these reflect the importance of the underlying dynamics of how we could (re)frame our approaches to change, engage the right people in the right context and achieve sustainable solutions throughout the health system.	PubMed
Leadership Needs to Shift in the Health System: Three Emerging Perspectives to Inform Our Way Forward	R Lindstrom	Artikel	2013	Front-Line Ownership			Studienziel	Zimmermann have brought to light a number of issues that lead to a collective failure in healthcare safety culture, and propose how to overcome them	Google Scholar
Leadership of interprofessional health and social care teams: a socio-historical analysis	S Reeves, K Macmillan, M van Soeren	Journals	2010	J Nurs Manag	18	3	Studiendesign	The aim of this paper is to explore some of the key socio-historical issues related to the leadership of interprofessional teams. BACKGROUND: Over the past quarter of a century, there have been repeated calls for collaboration to help improve the delivery of care. Interprofessional teamwork is regarded as a key approach to delivering high-quality, safe care. EVALUATION: We draw upon historical documents to understand how modern health and social care professions emerged from 16th-century crafts guilds. We employ sociological theories to help analyse the nature of these professional developments for team leadership. KEY ISSUES: As the forerunners of professions, crafts guilds were established on the basis of protection and promotion of their members. Such traits have been emphasized during the evolution of professions, which have resulted in strains for teamwork and leadership. CONCLUSIONS: Understanding a problem through a socio-historical analysis can assist management to understand the barriers to collaboration and team leadership. IMPLICATIONS FOR NURSING MANAGEMENT: Nursing management is in a unique role to observe and broker team conflict. It is rare to examine these phenomena through a humanities/social sciences lens. This paper provides a rare perspective to foster understanding - an essential precursor to effective change management.	PubMed
Leadership Q&A. The reality of documentation, health information exchanges	Rosanne Raso	Journals	2011	Nursing Management	42	12	Studienziel	The article focuses on the regulations for nursing documentation and the reality of a health information exchange (HIE) in the U.S. According to Cheryl Hoying, president of the American Organization of Nurse Executives (AONE), the rules for documentation are aimed to improve quality and safety in the coordination of care. Also, it notes that HIE remains a desirable goal to enhance patient-care quality by sharing access to electronic health information data.	EBSCO
Leadership qualities and health related behaviors: is there a relationship	Elizabeth A Jackson, Preeti Iyer, Jean E DuRussel-Weston, Caren S Goldberg, Bruche Rogers, LaVaughn Palma-Davis, Susan Aaronson, Catherine M Fitzgerald, Marc Zimmermun, Lindsey R Mitchell, Roopa Gurm, Kim A Eagle	Journals	2010	Journal of the American College of Cardiology	55	10	Studienziel	Medical study	ScienceDirect
Leadership, job well-being, and health effects -- a systematic review and a meta-analysis	J Kuoppala, A Lamminpää, J Liira, H Väinö	Journals	2008	J Occup Environ Med	50	8	Studiendesign	The aim of this systematic literature analysis was to study the association between leadership and well-being at work and work-related health. These intermediate outcomes are supposed to predict work-related loss of productivity and disability at work. METHODS: Original articles published in 1970 to 2005 were searched in MEDLINE and PsycINFO databases in a systematic manner. The main search terms were leadership, job satisfaction, well-being, sick leave, and disability pension. Out of 303 references, 93 publications were retrieved. In addition, other sources produced 69 articles. The strength of evidence was evaluated comprehensively. Altogether, 109 articles were thoroughly analyzed; our conclusions are based on 27 articles providing the best evidence. RESULTS: There was moderate evidence that leadership is associated with job well-being (risk ratio [RR] 1.40, range 1.36 to 1.57), sick leave (RR 0.73, range 0.70 to 0.89), and disability pension (RR 0.46, range 0.42 to 0.59). The evidence was weak on that leadership is associated with job satisfaction (median RR 2.23, range 1.30 to 3.51) but not with job performance (RR 1.13, range 0.55 to 1.20). CONCLUSIONS: There is a relative lack of well-founded prospective studies targeting the association between leadership and employee health, but the few available good studies suggest an important role of leadership on employee job satisfaction, job well-being, sickness absences, and disability pensions. The relationship between leadership and job performance remains unclear.	PubMed

Leadership, organization and health at work: a case study of a Swedish industrial company	A Eriksson, B Jansson, BJ Haglund, R Axelsson	Journals	2008	Health Promot Int.	23	2	-	The application of knowledge on organization and leadership is important for the promotion of health at workplace. The purpose of this article is to analyse the leadership and organization, including the organizational culture, of a Swedish industrial company in relation to the health of the employees. The leadership in this company has been oriented towards developing and actively promoting a culture and a structure of organization where the employees have a high degree of control over their work situation. According to the employees, this means extensive possibilities for personal development and responsibility, as well as good companionship, which makes them feel well at work. This is also supported by the low sickness rate of the company. The results indicate that the leadership and organization of this company may have been conducive to the health of the employees interviewed. However, the culture of personal responsibility and the structure of self-managed teams seemed to suit only those who were able to manage the demands of the company and adapt to that kind of organization. Therefore, the findings indicate that the specific context of the technology, the environment and the professional level of the employees need to be taken into consideration when analysing the relation between leadership, organization and health at work.	PubMed
Leadership, Quality and Health: Using McGregor's X and Y Theory for Analyzing Values in Relation to Methodologies and Outcomes	Johan Larsson, Stig Vinberg, Hakan Wiklund	Journals	2007	Total Quality Management & Business Excellence	18	10	-	Sweden has experienced an increase in sickness absenteeism, stress-related health problems and a deterioration of psychosocial working conditions. Several researchers have emphasized that leadership with a focus on developing human resource practices is a necessary component of a high organizational performance. The purpose of this article is to explore whether there are patterns in leadership values and methodologies associated with subordinates' views of leadership, health outcomes and quality aspects. Four public and four private organizations in northern Sweden were studied. McGregor's X and Y hypotheses, plus three other hypotheses, were used as a base for the analyses. Data were gathered through in-depth interviews with the leaders, questionnaires (completed by leaders and co-workers), and assessment of selected human resource accounting data (sickness absenteeism). The leader views were mirrored with the co-worker views through a comparison of qualitative and quantitative results in a stepwise analysis process. The study's main findings were that leaders with more X hypotheses get lower results concerning employee-judged leadership and quality aspects and, to some extent, lower results concerning health outcomes. The explanatory analyses concerning leadership and health are complex with many influencing factors	EBSCO
Leadership's Effects on Employee Health, Well-Being		Periodical	2008	Occupational Hazards	70	9	Studiendesign	The article focuses on the effects of leadership on employee health and well-being, citing the results of a study led by Dr. Kuoppala Jaana of Siinto Kiiskilampi, Finland and published in the August 2008 issue of the "Journal of Occupational and Environmental Medicine." The review of factors relevant to leadership and employee well-being revealed moderately strong evidence linking good leadership to increased employee well-being.	EBSCO
Learning-circle partnerships and the evaluation of a boundary-crossing leadership initiative in health	C Reinelt, D Yamashiro-Omi ...	Artikel	2010	The Foundation ...			Studienziel	Boundary-crossing leadership is leading across differences of culture, race, gender, age, etc. The authors used learning circles to promote both the development of, and learning about, this style of leadership. They created learning circles as part of the evaluation of leadership programs that were designed to have an impact on health disparities. The use of learning circles enable foundation staff and community members to engage together in a more trusting climate to address the underlying issues.	Google Scholar

Leistungs- und Gesundheitsmanagement - die individuell Ebene	Michael Kastner	Literatur-nachweis	2010				Studienziel	Vor dem Hintergrund des Wandels sozialer und beruflicher Strukturen, die mit zahlreichen Stressoren einhergehen, wird die Notwendigkeit eines individuellen und selbstverantwortlichen Leistungs- und Gesundheitsmanagements zur Praevention von psychischen Erkrankungen der Mitarbeiter diskutiert. In diesem Kontext wird das Work-Life-Balance-(WLB-)Konzept vorgestellt, welches sich mit der Vereinbarkeit von Beruf und Privatleben beschæftigt. Im Anschluss an eine Betrachtung des Spill-Over-Effekts (Uebertrag von Verhaltensweisen, Faehigkeiten, Emotionen und Einstellungen aus dem Berufsleben ins Privatleben und umgekehrt) wird der Wandel der Arbeitsprozesse (mehr Selbststeuerung durch Mitarbeiter, temporæere Formen der Kooperation, staendige Weiterqualifizierungen, Flexibilitæats- und Mobilitæatsanforderungen, Zeitdruck, Versagensængste), welcher sich zu Lasten des Privatlebens auswirkt, verdeutlicht. Mit Bezug auf den hohen Eigenanteil der Individuen an dem Zustandekommen einer beruflichen Ueberforderung wird ein Selbst-Coaching-Konzept zur Herstellung von WLB beschrieben. Zentral ist dabei, ein Gleichgewicht zwischen Investition und Konsumation innerhalb der Arbeit und des Privatlebens zu schaffen. Das Modell umfasst Belastungen und Anforderungen sowie Ressourcen seitens Personen, Organisationen und Situationen sowie Anforderungs- und Ressourcenpuffer zum Ausgleich. Konkrete Massnahmen zur Optimierung der WLB sowie Vorgehensweisen bei Schulungen und Beratungen/Coaching werden eruiert. Abschliessend werden Problembereiche des individuellen Leistungs- und Gesundheitsmanagements thematisiert, etwa die Erreichbarkeit der eigentlichen Zielgruppe, eine mangelnde oder schwer beizubehaltende Volition, Schwierigkeiten bei der oekonomischen Evaluation, Problem der Multikausalitæet von Gesundheit. Linking better shiftwork arrangements with safety and health management systems	K Kogi	Journals	2004	Rev Saude Publica			Studienziel	Various support measures useful for promoting joint change approaches to the improvement of both shiftworking arrangements and safety and health management systems were reviewed. A particular focus was placed on enterprise level risk reduction measures linking working hours and management systems. METHODS: Voluntary industry-based guidelines on night and shift work for department stores and the chemical, automobile and electrical equipment industries were examined. Survey results that had led to the compilation of practicable measures to be included in these guidelines were also examined. The common support measures were then compared with ergonomic checkpoints for plant maintenance work involving irregular nightshifts. On the basis of this analysis, a new night and shift work checklist was designed. RESULTS: Both the guidelines and the plant maintenance work checkpoints were found to commonly cover multiple issues including work schedules and various job-related risks. This close link between shiftwork arrangements and risk management was important as shiftworkers in these industries considered teamwork and welfare services to be essential for managing risks associated with night and shift work. Four areas found suitable for participatory improvement by managers and workers were work schedules, ergonomic work tasks, work environment and training. The checklist designed to facilitate participatory change processes covered all these areas. CONCLUSIONS: The checklist developed to describe feasible workplace actions was suitable for integration with comprehensive safety and health management systems and offered valuable opportunities for improving working time arrangements and job content together.	PubMed
Local Agreements as an Instrument for Improvement of Management-Employee Collaboration on Occupational Health and Safety	Ole H. Sorensen, Peter Hasle, Steen E. Navrbjerg	Journals	2009	Economic & Industrial Democracy	30	4	keine Organisation	Employee participation is crucial to safe and secure workplace environments. Health and safety regulation or voluntary agreements form two different approaches to this. In Denmark, a legislative change facilitates combining the two approaches. The new flexibility of approach enables the organization of health and safety to be tailored to the needs of the workplace based on a local agreement negotiated between management and local union representatives. This new approach is explored in this article. The study finds that the system has a positive impact on employee participation, improves collaborative relations, strengthens local commitment and there is a perceived increase in organizational efficiency and flexibility; all factors that have been shown to increase safety performance.	EBSCO
Local health department leadership strategies for healthy built environments	H Kuiper, RJ Jackson, S Barna, WA Satariano	Journals	2012	J Public Health Manag Pract	18	2	Studienziel	The built environment is an important but less-recognized health determinant, and local health departments need expanded guidance to address it. In such situations, leadership is particularly relevant. OBJECTIVE: To assess whether and how local public and environmental health leaders increase their departments' health-promoting impact on built environment design, and what pitfalls they should avoid. DESIGN: Mixed-methods employing cross-sectional surveys and a comparative case study. SETTING: Local public and environmental health departments. PARTICIPANTS SURVEY: A total of 159 (89%) health officers, health directors, and environmental health directors from all 62 local jurisdictions in California. Case-Study: Three departments, 12 cases, 36 health and land-use professionals, and 30 key informants. MAIN OUTCOME MEASURES: The study measured the influence of leadership practices on health departments' built environment-related collaborations, land use activities, policy developments, and contributions to physical changes. Quantitative multivariate linear and logistic regression were used. Case-study content analysis and pattern-matching, which related strong and weak leadership practices to outcomes, were also employed. RESULTS: Departments having highly innovative leaders with positive attitudes had greater odds of achieving physical changes to the built environment (OR: 4.5, 3.4, respectively). Leadership that most prepared their departments for built environment work (by updating staffing, structure, and strategy) tripled interagency and cross-sector collaboration (OR: 3.4). Leadership of successful departments consistently (1) established and managed a healthy built environment vision, (2) cultivated innovation, (3) supported, empowered and protected staff, (4) directly engaged in land use and transportation processes, (5) established direct contacts with directors in other departments, and (6) leveraged their professional reputation. Inconsistency in these practices was twice as common among failure as success cases (80%, 43%). CONCLUSIONS: Local health leadership underlies public and environmental health departments' community design efforts and should receive technical support and targeted resources to do so effectively.	PubMed
Long History of Management Challenges Raises Concerns about VA's and DOD's New Approach to Sharing Health Information		Government Document	2013	GAO Reports			keine Organisation	The article presents the study of the Government Accountability Office (GAO) on management challenges and concerns on the sharing of health information between the Department of Defense (DOD) and the Department of Veterans Affairs (VA) in the U.S. The agency found that both shared health records and information on their patients. It discovered that it is plagued by poor oversight, lack of accountability and weaknesses in management, thereby preventing its full interoperability.	EBSCO

Looking for the leadership to successfully implement evidence-based supported employment in mental health - what has leadership theory got to offer?	H Lockett	Artikel	2009	International Journal of Leadership in Public			Studiendesign	There is an established international evidence base on supported employment for people with severe and enduring mental health problems, and now a growing evidence base on how to successfully implement this into practice. The Google Scholar process involves substantial organisational development and change, and therefore effective leadership is critical. This article outlines some of the challenges to implementing supported employment services and explores what recent leadership theory could contribute to this process, as the Sainsbury Centre embarks on its Centres of Excellence Programme in England and seeks to build a wider learning community from our partnerships formed through the International Initiative for Mental Health Leadership (IIMHL).	
MABOSS als Einstieg in betriebliches Gesundheitsmanagement	Dany Fleming, Robert Gründer, Roland Schulz	Literatur-nachweis	2012				Studienziel	Um den Nutzen von betrieblichem Gesundheitsmanagement aufzuzeigen und geeignete Massnahmen abzuleiten, ist zunächst eine umfassende Problemanalyse notwendig. Dieser Prozess muss moeglichst effizient ablaufen. Deshalb entwickelte die Dresdner Unternehmensberatung Wissensimpuls das onlinebasierte Screeningverfahren MABOSS (Monetary Assessment and Benchmark of Stress and Strain). MABOSS basiert auf der DIN EN ISO 10075, ermöglicht eine schnelle und umfassende Erhebung von Belastung und Beanspruchung, zeigt relevante Staerken und Schwachen des Unternehmens auf und stellt damit einen geeigneten Einstieg in das betriebliche Gesundheitsmanagement dar. Bei der darauf aufbauenden Erarbeitung und Implementierung von Gestaltungsmaßnahmen werden die betroffenen Mitarbeiter aktiv beteiligt, um durch Transparenz und Partizipation ein moeglichst hohes Mass an Akzeptanz und Commitment fuer die nachhaltige Umsetzung von Gestaltungsmaßnahmen zu erzielen. Der Mehrwert von MABOSS gegenueber existierenden Verfahren besteht darin, bei einer Erhebungsdauer von nur knapp 20 Minuten einen vollstaendigen Ueberblick ueber alle Aspekte von Belastung und Beanspruchung zu liefern, mit der zusaetzlichen Option einer monetären Abschätzung krankheitsbezogener Kosten auf Unternehmensebene. Zur besseren Interpretation werden diese Werte mit den Durchschnittswerten der jeweiligen Branche und/oder Region verglichen. Gemäss dem Anspruch einer optimalen Partizipation der Betroffenen werden Diskussion und Interpretation der Ergebnisse durch die Mitarbeiter selbst vorgenommen und auf dieser Basis geeignete Veränderungsmaßnahmen entwickelt. Dies geschieht in Form von Workshops, welche durch externe Berater moderiert werden. Das Vorgehen ermöglicht dem Unternehmen eine objektive Sicht auf seine aktuelle Situation, stellt spezifisches Fachwissen bereit und erhöht die Akzeptanz und Unterstützung der Mitarbeiter, um die nachhaltige Umsetzung von erarbeiteten Verbesserungsmassnahmen und deren Beitrag zum Unternehmenserfolg zu sichern. Das standardisierte und transparente Vorgehen von MABOSS ermöglicht es, unter Mitsprache und Einbindung der betroffenen Mitarbeiter massgeschneiderte Gestaltungsmaßnahmen abzuleiten und deren Nutzen und Effektivitaet systematisch zu evaluieren. Nur Vorbereitungen auf Gefahren von außen entscheidend sind, sondern Verhaltensänderungen auf lange Sicht. -	WISO
Management for sustainable health: A TQM-inspired model based experiences taken from successful Swedish organization	Asa Wreder, Maria Gustavsson, Bengt Klefsjö	Journals	2008	International Journal of Quality & Reliability Management	25	6	-	Purpose – The purpose of this paper is threefold: to describe how a large organization has successfully worked to achieve sustainable health; compare the work of the large organization with methodologies used by smaller successful organizations; and then to create a model for how managers of larger organizations can work to create sustainable health. Design/methodology/approach – The empirical data were gathered through interviews with managers at different organizational levels and workshops with employees, within a case study in a large bank which received the award “Sweden's best workplace”. The data were also compared to results from earlier case studies of three smaller organizations that have received the same award. Findings – The results of the studies show coinciding results as to the importance of management commitment and methodologies, such as employee involvement, delegation, goal deployment and coaching, to create a health-promoting work environment. This indicates that larger organizations do not need any specific methodologies. Practical implications – Based on the experiences from four successful organizations, managers should mainly consider doing the following: start measuring and evaluating the consequences of sickness absence in their organization; and adopt a management strategy based on humanistic core values that are supported by methodologies and tools. Originality/value – The paper adds understanding about how managers of large organizations could work practically to overcome management problems in today's working life and support the work and organizational factors earlier described in the literature to create a health-promoting work environment that stimulates the development of sustainable health.	Emerald
Management is a health hazard	Leo D'Angelo Fisher	Periodical	2008		30	37	Studiendesign	The article highlights a survey which showed that five out of 10 Australian executives believe that their health is adversely affected by the long hours of work. The study, commissioned by the Chartered Management Institute and the Australian Institute of Management, also showed that 91 percent of managers in Great Britain and Australia regularly work more than their contract hours. Management of eWork issues: A new perspective on an old problem	Elizabeth Kirk, Jenny Strong	Journals	2010	Work	35	2	Studienziel	Contact centres are vehicles for a rapidly growing group of knowledge workers, or eWorkers. Using computers and high-speed telecommunications connections as work tools, these employees spend long hours performing mentally demanding work while maintaining static, physically stressful, seated positions. The complex interplay between job demands, work environment, and individual differences combine to produce high levels of physical discomfort among eWorkers. This paper discusses a new view that has emerged, one that focuses on the management rather than the elimination of work related upper limb disorders (WRULD) and computer vision syndrome (CVS) issues that are prevalent among eWorkers. It also reviews a cultural shift among practitioners and business that moves towards a consultative process and the sharing of knowledge among all stakeholders. The controlled work conditions and large single location workforce found within contact centres provide the opportunity to understand the personal and industry cost of eWork injuries and the ability to develop and review new multifaceted interventions. Advances in training and workplace design aimed at decreasing discomfort and injury and reducing the associated economic burden may then be adapted for all eWorkforce groups.	EBSCO
Management of Work site health promotion: A longitudinal field study 3	B Zimolong, G Elke	Artikel		Bochumer Berichte			Studienziel	Based on the framework of a healthy work organization and of a holistic health management system, the aim of this project was the development, implementation, evaluation and transfer of a holistic health management system within the tax administration of North-Rhine Westphalia, Germany. Results from a three years longitudinal study indicate moderate to small benefits in the development of organizational and individual health resources and health effects. To reach long term sustainability, health promotion structures and processes have been adapted and readjusted at all levels of the fiscal authorities.	Google Scholar
Management of work site health-promotion programs: a review	B Zimolong, G Elke	Artikel	2009	Ergonomics and Health Aspects of Work with ...			Studienziel	The review starts with the assessment of needs for health promotion, particularly drawing upon the aging of the workforce in Europe and U.S. Basic intervention models for work site health promotion programs (WHP) are outlined. Recent findings of WHP outcomes underscore the requirement to integrate health promotion into the management system of the organization. Based on the framework of healthy work organization and of Health Management Systems the research project INOPE is described. The objective is the development, implementation, evaluation and transfer of a holistic health management system within the German tax administration.	Google Scholar

Managerial leadership is associated with employees stress, health, and sickness absence independently of the demand-control-support model	Hugo Westerlund, Anna Nyberg, Peggy Bernin, Martin Hyde, Gabriel Oxenstierna, Pavo Jappinen, Ari Väianänene, Töres Theorell	Journals	2010	Work	37	1	-	Objectives: Research on health effects of managerial leadership has only taken established work environment factors into account to a limited extent. We therefore investigated the associations between a measure of Attentive Managerial Leadership (AML) and perceived stress, age-relative self-rated health, and sickness absence due to overtrain/fatigue, adjusting for the dimensions of the Demand-Control-Support model. Participants: Blue- and white-collar workers from Finland, Germany and Sweden employed in a multi-national forest industry company (N=12,622). Methods: Cross-sectional data on leadership and health from a company-wide survey analysed with logistic regression in different subgroups. Results: AML was associated with perceived stress, age-relative self-rated health, and sickness absence due to overtrain/fatigue after controlling for the Demand-Control-Support model. Lack of AML was significantly associated with a high stress level in all subgroups (OR=1.68–2.67). Associations with age-relative self-rated health and sickness absence due to overtrain/fatigue were weaker, but still significant, and in the expected direction for several of the subgroups studied, suggesting an association between lack of AML and negative health consequences. Conclusion: The study indicates that managerial leadership is associated with employee stress, health, and sickness absence independently of the Demand-Control-Support model and should be considered in future studies of health consequences for employees, and in work environment interventions. Managing with maps? The development and institutionalization of a map-based health management information system in Madhya Pradesh, India	A De Costa, V Saraf, M Jhalani, VK Mahadik, VK Diwan	Journals	2008	Scand J Public Health	36	1	keine Organisation	This paper presents the development of a map-based health management information system (mHIMS) in the central Indian province of Madhya Pradesh. Sample outputs and statistics from the system for one district are presented. The implementation dynamics and the preliminary performance of the system are discussed. METHODS: The development of the mHIMS was a collaborative effort between the provincial Department of Health, the medical university and the Danidasupported Madhya Pradesh Basic Health Services project. One of India's most socioeconomically backward provinces, Madhya Pradesh is spread over an area of 304,000 km(2), and has a population of 60.4 million distributed in its 55,392 villages and 394 towns. A primary survey of all healthcare providers (public and private) in the province was done to map these. Secondary data sources for sociodemographic information (census of India), vital statistics and health program indicators (health worker records) were used in developing the system. The process of mapping from obtaining hand-drawn maps of the villages from the commissioner, land records, to final digitizing is also described. CONCLUSIONS: Sample outputs and statistics for one district (Chindwara) from the system are presented. There were 20.35 trained doctors in rural areas and 72.78 in urban areas per 100,000 population. Preliminary experience after a year, advantages, constraints (both systemic limitations and weakness in the mHIMS) to optimal usage, and future prospects for use in this setting are discussed.	PubMed
Märkte / Gesundheit: Hochkosten - Management wird wenig genutzt	Matthias P Schänermark, Thomas Temme, Heike Kielhorn	Literatur-nachweis	2011	Versicherungswirtschaft	66	14	Studien-teilnehmer	Wie die Autoren informieren, stellt die Steuerung von häufig kranken Personen bzw. Hochkosten-Fällen oder Großschäden eine besondere Herausforderung in der Krankenversicherung dar. Meistens handelt es sich um Multimorbide oder um schicksalshaft schwer erkrankte Versicherte, respektive Patienten, die aufgrund ihrer schweren und/oder seltenen Erkrankung auf eine extensive Nutzung des Leistungsangebots des deutschen Gesundheitssystems angewiesen sind. Aufgrund der Schwere der Erkrankung und des oftmals sehr individuellen Krankheitsverlaufs waren die Versicherer bislang außerordentlich zurückhaltend in der Entwicklung von systematischen Steuerungsansätzen zur Kostenkontrolle und zur Optimierung der Versorgungsqualität. Meeting the Leadership Challenge of Employee Well-Being Through Relationship PsyCap and Health PsyCap	Fred Luthans, Carolyn M. Youssef, David S. Sweetman, Peter D. Harms	Journals	2013	Journal of Leadership & Organizational Studies	20	1	-	Increasing recognition is being given to the role that employee overall well-being plays in desired outcomes of today's organizations. To help organizational leaders searching for understanding and answers, we propose that the positive core construct of psychological capital (or simply PsyCap), consisting of the positive psychological resources of hope, efficacy, resiliency, and optimism can be extended into the well-being domain. Although PsyCap has been clearly demonstrated to be related to employee attitudes, behaviors, and performance, linking it with other life domains relevant to overall well-being has yet to be tested. After first building a comprehensive conceptual foundation for extending PsyCap into the well-being domain, we empirically found that a cross section of employees' (N = 523) "Relationship PsyCap" and "Health PsyCap" were related to both their respective satisfaction appraisals and desired objective outcomes. In addition, these two extended life satisfactions, along with the already well-established work satisfaction, combined to relate to the appraisal of the study participants' overall well-being. This well-being was in turn found to be related to their overall level of PsyCap. These findings have implications for helping leaders meet the challenges they face in both understanding and helping develop the overall well-being of their employees.	EBSCO

Mental Health And Addiction Workforce Development: Federal Leadership is Needed to Address The Growing Crisis.	Michael A. Hoge, Gail W. Stuart, John Morris, Michael T. Flahery, Manuel Jr. Paris, Eric Goplerud	Journals	2013	Health Affairs	32	11	Studienziel	The mental health and addiction workforce has long been plagued by shortages, high turnover, a lack of diversity, and concerns about its effectiveness. This article presents a framework to guide workforce policy and practice, emphasizing the need to train other health care providers as well as individuals in recovery to address behavioral health needs; strengthen recruitment, retention, and training of specialist behavioral health providers; and improve the financial and technical assistance infrastructure to better support and sustain the workforce. The pressing challenge is to scale up existing plans and strategies and to implement them in ways that have a meaningful impact on the size and effectiveness of the workforce. The aging and increasing diversity of the US population, combined with the expanded access to services that will be created by health reform, make it imperative to take immediate action.	EBSCO
Mental health and values-based leadership	Mike Coke	Journals	2007	Journal of Management & Marketing in Healthcare	1	1	Studienziel	Values-based leadership offers a good way forward in mental health leadership and the emerging UK mental health market. People with mental health needs have historically waited too long for assessment and treatment. While demand for mental health and mental wellness's services is rising, access has improved, as has the variety of what is offered, particularly in the community. Service users and patients can now choose, and some will be advised that, while convenience and additional quality are important, the values of the individual or team advising or treating them are fundamental. Mental health staff derive their value base from a blend of influences, such as inspiring practitioners, past role models and often from service users themselves. However, their boss is more crucial than all of these, especially if that boss was responsible for appointing them. Values-based leadership makes it possible to be entrepreneurial within a value base.	EBSCO

Non-listening and self centered leadership -- relationships to socioeconomic conditions and employee mental health	T Theorell, A Nyberg, C Leineweber, LL Magnusson Hanson, G Oxenstierna, H Westerlund	Journals	2012	PLoS One	7	9	-	The way in which leadership is experienced in different socioeconomic strata is of interest per se, as well as how it relates to employee mental health. METHODS: Three waves of SLOSH (Swedish Longitudinal Occupational Survey of Health, a questionnaire survey on a sample of the Swedish working population) were used, 2006, 2008 and 2010 (n = 5141). The leadership variables were: "Non-listening leadership" (one question: "Does your manager listen to you?"--four response categories), "Self centered leadership" (sum of three five-graded questions--"non-participating", "asocial" and "loner"). The socioeconomic factors were education and income. Emotional exhaustion and depressive symptoms were used as indicators of mental health. RESULTS: Non-listening leadership was associated with low income and low education whereas self-centered leadership showed a weaker relationship with education and no association at all with income. Both leadership variables were significantly associated with emotional exhaustion and depressive symptoms. "Self centered" as well as "non-listening" leadership in 2006 significantly predicted employee depressive symptoms in 2008 after adjustment for demographic variables. These predictions became non-significant when adjustment was made for job conditions (demands and decision latitude) in the "non-listening" leadership analyses, whereas predictions of depressive symptoms remained significant after these adjustments in the "self-centered leadership" analyses. CONCLUSIONS: Our results show that the leadership variables are associated with socioeconomic status and employee mental health. "Non-listening" scores were more sensitive to societal change and more strongly related to socioeconomic factors and job conditions than "self-centered" scores.	PubMed

Occupational Health and Safety Management in Organizations: A Review	Michael Zanko, Patrick Dawson	Journals	2012	International Journal of Management Reviews	14	3	Studiendesign	In examining the research literature on occupational health and safety (OHS), this paper argues that the growth in the number of specialists in OHS has resulted in an emphasis on policy and practice away from more scholastic concerns previously addressed by academics in the disciplines of psychology and sociology. A hiatus has occurred, and this is evidenced by the general absence of studies in management, even though OHS is increasingly seen as a key operational and strategic concern of business organizations. The authors call for OHS to be placed firmly on the research agenda of management scholars, and advocate the need for greater conceptual development, empirical study and theoretical reflection to complement existing pragmatic concerns of OHS specialists. In this review, the contributions of psychology, sociology, industrial relations and management studies are assessed, and five categories of specialist OHS literature are analysed, namely: prescriptive; systematic OHS management; success based; error and disaster based; and culture, climate and high-reliability studies. The conceptual and methodological limitations of this specialist focus are discussed, and future research opportunities are highlighted, for which the authors argue that management scholars embrace a range of methodological approaches. The authors advocate the value of extended case studies which examine OHS in context and over time in particular workplace settings. There remains considerable scope to develop this field further and, in conclusion, particular attention is drawn to the value of process-oriented contextual approaches for understanding OHS management in organizations. Occupational health management and service for small-scale industries in Shanghai	Lu Wie, Wu Shi-da	Journals	2004	Toxicology	198	1-3	Studienziel	Because occupational hazards of small-scale industries were severe and the occupational health management lagged behind in Shanghai, we selected some districts as experimental units to explore a model of community management and service for the occupational health in small-scale industries for controlling occupational hazards. The results indicated that the model is useful. The features of occupational health in these small-scale industries have been improved markedly. For example, the monitoring rate of occupational hazards increased, the rate for occupational health recording and training also increased, and the knowledge of the occupational health among managers and employees has been also enhanced after implementing the new management model. The practice has shown that it is a low-cost and wide-covered, effective model. The communities may offer the standard, agreeable and low-price occupational health management and service to the small-scale industries which are able to pay the service fee although their economic base is comparatively weak. A solution for protecting the occupational population with relatively high mobility and keeping small-scale industries sustainable development has been reported.	ScienceDirect
Occupational health management in the lead industry: the korean experience	BK Lee	Journals	2011	Saf Health Work	2	2	Studienziel	In 1967, the problem of occupational lead exposure came to public attention in Korea. Since then, regular progress has been made in lowering workplace lead exposures, instituting new workplace controls, and implementing health examinations of exposed workers. Past serious lead poisoning episodes made it possible to introduce biological monitoring programs on a voluntary basis in high-lead-exposure facilities in Korea. Industry-specific occupational health services for lead workers in Korea during the last 22 years can be categorized into three phases. During the first phase (1988-1993), efforts were directed at increasing awareness among workers about the hazards of lead exposure, biological monitoring of blood zinc protoporphyrin began, and a respiratory protection program was introduced. During the second phase (1994-1997), a computerized health management system for lead workers was developed, blood-lead measurement was added to biologic monitoring, and engineering controls were introduced in the workplace to lower air-lead levels to comply with air-lead regulations. Finally, during the third phase (1998-present), a new biomarker, bone-lead measurement by X-ray fluorescence, was introduced. Bone-lead measurement proved to be useful for assessing body burden and to demonstrate past lead exposure in retired workers. Occupational health service practice for lead workers, including the industry-specific group occupational health system, has brought considerable success in the prevention of lead poisoning and in reducing the lead burden in Korean lead workers during the last several decades. The successful achievement of prevention of lead poisoning in Korea was a result of the combined efforts of lead workers, employers, relevant government agencies, and academic institutes.	PubMed
Occupational Health Management Research on Small & Medium-sized Enterprises Together with Large & Medium-sized State-owned Enterprises -- A cas study in Hubei Province	Zhang Jingdong, Zuo Han	Journals	2012	Procedia Engineering	43		Studienziel	With the rapid development of economy, occupational health problems have become increasingly prominent, especially in small and medium-sized enterprises. Small and medium-sized enterprises are important guarantee for economic development. More attentions are needed to pay on their occupational health problems. This paper took Hubei Province as an example. Through the data collected by fieldwork, occupational health management status in small and medium enterprises (SMEs), large enterprises, state-owned enterprises and foreign-funded enterprises were analyzed. Through this research, the status of OHS Management in Hubei Province is tried to understand and adequate reference to future development of OHS is tried to provide.	ScienceDirect

Paradigm lost? Reconsidering health psychology	Uwe Flick	Literatur-nachweis	2006	Journal of Health Psychology	11	3	Studienziel	Critical health psychology (CHP) is seen as entangled in the dilemma of where to locate itself in two ways: first, inside the original discipline of health psychology or outside and in confrontation to it. Second, in the field of related disciplines like medical sociology and (new) public health. Drawing parallels to earlier discussions in medical sociology, CHP is seen in an ambiguous intention of being critical to health psychology and of becoming a professional field in health psychology. CHP has difficulties making itself distinct from new public health approaches. Two examples of research are briefly mentioned. They address health concepts of health professionals and representations and practices concerning health of homeless adolescents.	WISO
Physician leadership: a roadmap for health-system change	RJ Solomon	Journals	2004	J Med Pract Manage	20	1	Studienziel	Physician involvement in health-system decision making and their support of health-system initiatives can be critical to a health system's success. Many physicians, however, do not have the business skills or perspective to be effective contributors. This paper identifies three levels of physician leader development: awareness and head knowledge; creating an "us" culture; and taking ownership of the marketplace. It also identifies three physician leader-development methods that health systems can use to reach these points: integrated executive education; project-based learning; and facilitating ownership. Based on health-system objectives, top management should choose an appropriate level of physician leader development and then implement an appropriate change plan by using the proposed physician leader-development methods.	PubMed
Planning and health management: perspectives and tendencies	FJ Rivera, E Artmann, LD de Lima	Journals	2010	Cien Saude Colet	15	5	Studienziel	We all want high-quality health care, but it's hard to know how to choose. There are many things to consider, including - What your insurance covers - Whether a health care provider or service is accredited - The location of a service - Hours that the service is available - Whether you like a health care provider's personality On this page you'll find information to help you choose a health care provider or service.	PubMed
Positive occupational health psychology: an introduction	AB Bakker, A Rodríguez-Monoz	Journals	2012	Psicothema	24	1	Studiendesign	This article introduces the monographic section on Positive Occupational Health Psychology (POHP), presenting eight theoretical and empirical papers about diverse topics. Traditionally, research on occupational health has mainly been focused on causes of diseases and on identifying and preventing work factors related to worker's impaired health. However, this biased view may not provide a complete understanding of the mechanisms that lead to employee well-being and performance. We discuss the differences of POHP with similar constructs, and review reasons for its importance in the development of this field. Overall, the studies included in the monographic section show the usefulness of focusing on positive constructs, and present ideas and questions that we hope may help to further our progress in the field of POHP.	PubMed
Prädiktoren gesundheitsförderlichen Führungshandelns	Barbara Pangert	Literatur-nachweis	2011				-	Was macht es eigentlich wahrscheinlich, dass Führungskraefte auf eine Art und Weise handeln, die sich gesundheitsfoerderlich fuer die Beschaeftigten darstellt? In der vorliegenden Dissertation wurden Praediktoren gesundheitsfoerderlichen Fuehrungshandelns abgeleitet und auf ihre empirischen Zusammenhaenge mit gesundheitsfoerderlichem Fuehrungshandeln hin untersucht. Als Basis fuer die Ableitung von Praediktoren wurde die Theorie des geplanten Verhaltens gewaehlt. Gemeinsam mit der Variablen Einstellung aus der Theorie des geplanten Verhaltens wurden vier Praediktoren gesundheitsfoerderlichen Fuehrungshandelns angenommen: die wahrgenommene Kultur gesundheitsfoerderlichen Fuehrungshandelns, die Einstellung gegenueber gesundheitsfoerderlichem Fuehrungshandeln, die individuelle Kompetenz, gesundheitsfoerderlich zu fuehren sowie der von Fuehrungskraeften wahrgenommene Taetigkeitsspielraum. Zu Ueberpruefung der erwarteten Zusammenhaenge zwischen den angenommenen Praediktoren und gesundheitsfoerderlichem Fuehrungshandeln wurde eine Querschnittsuntersuchung bei 222 Fuehrungskraeften durchgefuehrt. Die Praediktoren ebenso wie gesundheitsfoerderliches Fuehrungshandeln wurden anhand verschiedener selbstkonstruierter Fragebogenskalen erfasst. Die Ergebnisse zeigten beinahe durchgaengig die erwarteten bivariaten Zusammenhaenge zwischen den Praediktoren und den drei Komponenten gesundheitsfoerderlichen Fuehrungshandelns. Bei der regressionsanalytischen Prognose der Komponenten gesundheitsfoerderlichen Fuehrungshandelns anhand der vier Praediktoren zeigte sich auch bei Beruecksichtigung von Kontrollvariablen eine gemeinsame Varianzaufklaerung durch die vier Praediktoren zwischen 9 und 29 Prozent. Die Einstellung gegenueber gesundheitsfoerderlichem Fuehrungshandeln leistete als einziger Praedikator bei allen drei Komponenten gesundheitsfoerderlichen Fuehrungshandelns einen signifikanten eigenstaendigen Beitrag zur Varianzaufklaerung. predicotr of Japanese workers' motivation to use the result of worksite health checkups in their daily healthy management	Y Kudo, M Okada, M Tsunoda, T Satoh, Y Aizawa	Journals	2009	Tohoku J Exp med	219	3	Studienziel	Japanese law stipulates that workers undergo worksite health checkups. If workers do not use their results of those checkups in their daily health management, the merit of this law will not be realized. Therefore, it is important to identify the predictors to improve their motivation to use the results of health checkups. We investigated those predictors by using a questionnaire survey. Multiple linear regression analysis was conducted for 1,791 subjects (1,530 males and 261 females) at a Japanese manufacturing plant. The average age of enrolled subjects was 42.0 years (standard deviation [S.D.], 13.4 years). The average age of male subjects was 42.3 (S.D., 13.8) years and that of the female subjects was 39.9 (S.D., 10.4) years. The results revealed that as workers advanced in age, they maintained their motivation more to use those results. Women maintained their motivation more than men. Workers who believe that their health depends on the influence from physicians and healthcare providers in hospitals felt motivated. Workers who realized the effectiveness of those checkups to maintain good health, who knew how to adopt an appropriate lifestyle, and who were given consultations with physicians when they received their health checkups, felt motivated. Regarding the healthcare organizations' and occupational health staffs' responsibilities, only detecting illness early is not sufficient. Those healthcare providers must value more primary prevention. Our findings can be applied to various occupational health activities, including health consultations, health education seminars, and providing appropriate instruction on how to interpret the results of the worksite health checkups. Prevention, health promotion and workplace health management in German banks	Sven-Christopher Plath, Thorsten Köhler, Holger Krause, Holger Pfaff	Literatur-nachweis	2008	Journal of public health	16	3	Studienziel	The present study aims to assess the current state of workplace health promotion in German banks and to draw conclusions for the organization of future workplace prevention practice. Methods: A standardized telephone interview was conducted in 198 randomly selected banks in Germany, questioning one expert on health promotion from each bank. The interviews contained questions regarding health promotion activities and framework. Evaluation of the data was carriedout using descriptive statistical methods. Results: Health promotion practice in German banks is predominated by the implementation of measures from areas of analysis/ diagnosis as well as various relational prevention measures. By contrast, behavioral prevention activities are only of minor significance. Few banks have incorporated prevention activities into a systematic concept of workplace health management. Key persons in charge of prevention activities are held to be management (51.5%) as well as health and occupational safety representatives (41.9%). Conclusions: Banks are advised, in the future, to invest more resources into the development of systematic workplace health management. Since workplace health promotion is primarily considered as a management task, managers should receive a more target-specific training.	WISO
Produktivitätsfaktor Gesundheit - Gesundheitsbasiertes Management	Thomas Kuhlmann	Literatur-nachweis	2012	Gesprächspsychotherapie und Personzentrierte Beratung	43	1	Studienziel	Vor dem Hintergrund der derzeitigen Burn-out-Diskussion wird Gesundheit als Produktivitätsfaktor thematisiert und die weitreichenden Auswirkungen fuer das Verstaendnis von nachhaltiger Leistung sowie die Notwendigkeit eines Paradigmenwechsels im Management werden eroert. Daran anschliessend wird das Modell des Gesundheitsbasierenden Managements vorgestellt und anhand der Bereiche "Persoenliches Leistungsmanagement", "Gesundheitsbasierte Mitarbeiterfuehrung" und "Gesundheitsbasierte Organisationsentwicklung" erlaeutert.	WISO
Prozessmerkmale von Gesundheitsförderung und Gesundheitsmanagement	Eva Bamberg, Antje Ducki, Anna-Marie Metz	Literatur-nachweis	2011				Studienziel	Auf der Grundlage definierter Qualitätskriterien werden Steuerungsinstrumente und Vorgehensschritte beschrieben, die die operative Ebene eines umfassenden betrieblichen Gesundheitsmanagements betreffen. Dabei werden folgende Aspekte besprochen: (1) Gesundheitskultur als grundlegende Voraussetzung fuer Gesundheitsförderung und Gesundheitsmanagement ("Balanced Scorecard" als Steuerungsinstrument), (2) Beteiligung und Mitbestimmung als Grundwert betrieblicher Gesundheitsförderung (Formen der Mitbestimmung; Gesundheitszirkel als Beteiligungsinstrument im Gesundheitsmanagement), (3) Prozess des betrieblichen Gesundheitsmanagements (Ziele festlegen und operationalisieren; Ressourcen zuordnen; Analyse der Bedingungen als Planungsgrundlage; Durchfuehrung und Evaluation gesundheitsbezogener Massnahmen; Einbettung der Massnahmen in die Organisation; Besonderheiten in Kleinbetrieben). Abschliessend wird betont, dass Gesundheitsförderung ein Handlungskonzept ist, das durch die Grundprinzipien Ressourcenfokussierung, Empowerment und Langfristigkeit den Zielen, Strategien und Vorgehensweisen des betrieblichen Gesundheitsmanagements eine Richtung gibt. Gesundheitsmanagement umfasst gesundheitsbezogene Massnahmen, Massnahmen des Arbeitsschutzes und der Arbeitssicherheit, das betriebliche Eingliederungsmanagement und Massnahmen der Gesundheitsförderung. Das Gesundheitsmanagement plant, koordiniert, integriert und priorisiert gesundheitsbezogene Massnahmen und stimmt sie mit anderen Managementsystemen in Organisationen ab. Welche Massnahmen bevorzugt werden, wird nassgeblich durch die Unternehmenskultur beeinflusst.	WISO
Psychologie des Gesundheitsverhaltens	Ralf Schwarzer	Literatur-nachweis	2004				Studiendesign	Das Lehrbuch der Gesundheits-psychologie erlaeutert psychologische Theorien des Gesundheitsverhaltens, fasst den Erkenntnisstand zum Einfluss des Verhaltens auf die Entstehung von Krankheiten (u.a. Krebs und koronare Erkrankungen) zusammen und referiert enprirische Erkenntnisse zur Wirkung und Beeinflussung spezifischer Formen gesundheitsrelevanten Verhaltens. Fuer die 3. Auflage wurde der Text voellig neu aufgebaut und grundlegend aktualisiert. - Inhalt (1) Theoretische Konstrukte (Der optimistische Interpretationsstil; dispositionaler Optimismus; Selbstwirksamkeitserwartung; Risikowahrnehmung und defensiver Optimismus; defensiver und funktionaler Optimismus). (2) Theorien und Modelle des Gesundheitsverhaltens (Health-Belief-Modell; Theory of Reasoned Action; Theory of Planned Behavior; Protection Motivation Theory; die sozial-kognitive Theorie von Bandura; das Rueckfallmodell von Marlatt; Transtheoretical Model (TTM); Stages of Change; Health Action Process Approach (HAPA); Das sozial-kognitive Prozessmodell gesundheitlichen Handelns). (3) Verhalten und Krankheitsrisiko (Verhalten und Krebsrisiko; kardiovaskulaeres Risikoverhalten; Persoenlichkeit, Stressbewaeltigung und Krankheitsrisiko). Psychology of rehabilitation as a part of health psychology at the Division of Psychology ...	Gabriele Helga Franke, Christel Salewski, Matthias Morfeld	Literatur-nachweis	2008	Zeitschrift für Gesundheits-psychologie	16	3	Studien-teilnehmer	Summarizes the current research activities at the Division of Rehabilitation Psychology of the Magdeburg-Stendal University of Applied Sciences. Research activities predominately focus on chronic illness and disability encompassing a broad range of target populations such as adolescents with atopic eczema, patients suffering from non-life-threatening diseases such as eye diseases to patients suffering from severe diseases such as HIV/AIDS or renal disease. From a theoretical perspective, the research group aims at a better understanding of illness representations in patients as well as non-patients. A methodological research focus is the development of psychometric measures to assess health- and illness-related cognitions.	WISO
Psychometric analysis of the UK Health and Safety Executive's Management Standards work-related stress Indicator Tool	Julian A. Edwards, Simon Webster, Darren Van Laar, Simon Easton	Journals	2008	Work & Stress	22	2	Studienziel	Numerous tools have been developed that attempt to measure work-related stress and working conditions, but few practical instruments in the literature have been found to have a reliable psychometric factor structure. In the UK, the Health and Safety Executive (HSE) Management Standards (MS) Indicator Tool is increasingly used by organizations to monitor working conditions that can lead to stress. In Health and Safety Executive (2004), a factor analysis was conducted demonstrating the reliability of the scales. However, the authors acknowledged that direct reassessment of the same factor structure was impossible as the questionnaire was split into two separate modules for data collection. Furthermore, the tool is designed to enable comparisons between as well as within organizations to take place, yet reliability has only previously been tested at the individual level. The current study is the first to examine the factor structure of the HSE MS Indicator Tool using organizational-level data. Data collected from 39 UK organizations (N=26,382) was used to perform a first-order Confirmatory Factor Analysis (CFA) on the original 35-item seven-factor measurement scale. The results showed an acceptable fit to the data for the instrument. A second-order CFA was also performed to test if the Indicator Tool contains a higher order uni-dimensional measure of work-related stress. These findings also revealed an acceptable fit to the data, suggesting that it may be possible to derive a single measure of work-related stress. Normative data comprising tables of percentiles from the organizational data are provided to enable employers to compare their organizational averages against national benchmarks.	EBSCO
Psychosocial aspects and body pain: Results form an employee survey in the frame of MAF-project "Integrated health management in companies: employee survey about working conditions as management tool"	H Spiegel, N Meyer, C Mollenkopf, D Nowak	Journals	2011	Gesundheitswesen	73	12	Studienziel	The aim of the study is to present a compact employee attitude survey for companies within a health care management tool. Beside body pains work-related psychosocial risk factors as well as further influencing factors, are taken into consideration. The questionnaire was evaluated by 6 Bavarian companies. METHOD: Potential influencing factors on physical problems like back pain, neck- and shoulder tension, gastro-intestinal diseases and headache were examined by multiple analysis. Dissatisfaction with working conditions was also examined in the same way. All analyses were carried out age and sex adjusted. RESULTS: Statistical analyses are based on 3,720 employees of 3 companies out of a total of 6 companies who answered the questionnaires. Response rates of the different companies ranged from 34 to 60%. Psychomental demands and psychosocial strains were found to be the strongest predictors for body pains as well as for dissatisfaction with working conditions. CONCLUSIONS: The introduced questionnaire is easy to implement within the framework of a company health care management. It has an holistic approach. We could demonstrate that this instrument is able to reveal multiple aspects of work-related body pain as well as multiple aspects of dissatisfaction with working conditions. Thus it is a starting point for the development of necessary measures for health promotion.	PubMed
Psychosocial risk assessment: Measurement invariance of the UK Health and Safety Executive's Management Standards Indicator Tool across public and private sector organizations	Julian A. Edwards	Journals	2012	Work & Stress	26	2	Studienziel	This study provides evidence to support the validity of the UK Health and Safety Executive Management Standards Indicator Tool, which is widely used in the UK by organizations to test for stress-related working conditions. A large pooled data set was collected from 137 UK organizations (N=67,347) to test the factor structure of both the original 35-item seven-factor instrument and a new shorter 25-item version. The results showed that the tool was a good fit to the data for both versions. Further analysis examined the factor structure of the Indicator Tool by splitting the data set into both public and private sector organizations. Tests for measurement invariance showed that both versions of the Indicator Tool provided a good fit to the data. The final sequence of analysis showed that the measurement structure of both the 25-item and 35-item scales was also invariant across small-, medium- and large-sized organizations. The current study provides percentile tables for both the public and private sectors so that organizations can compare their scores against UK national benchmarks. Overall, this study validates both the full and the short versions of a valuable and reliable diagnostic instrument for use in a variety of organizations.	EBSCO
Psychosoziale Aspekte und körperliche Beschwerden - Ergebnisse einer Mitarbeiterbefragung	H Spiegel, N Meyer, C Mollenkopf, D Nowak	Literatur-nachweis	2011	Das Gesundheitswesen	73	12	Studienziel	Ziel der Studie: Ziel der Studie ist die Vorstellung eines kompakten Befragungssystems, das Unternehmen im Rahmen eines betrieblichen Gesundheitsmanagements einsetzen und implementieren koennen. Neben koerperlichen Beschwerden werden deren moegliche psychosoziale Ursachen sowie weitere Einflussgrossen beruecksichtigt. Das Befragungssystem "Mitarbeiterbefragung ueber Arbeitsbedingungen als Führungsinstrument" (MAB) wurde in 6 bayerischen Unternehmen eingesetzt und erprobt. Methodik: Mittels multipler Analysen wurden potenzielle Einflussgrossen auf die koerperlichen Beschwerden Rueckenschmerzen, Nacken- und Schulterverspannungen, Magen-/Darmerkrankungen und Kopfschmerzen sowie auf die Unzufriedenheit mit den Arbeitsbedingungen untersucht. Die Analysen wurden adjustiert fuer Alter und Geschlecht durchgefuehrt. Ergebnisse: Die Analysen stuetzen sich auf Angaben von insgesamt 3720 Mitarbeitern und Mitarbeiterinnen aus 3 der 6 beteiligten bayerischen Betriebe. Die Teilnahmeraten in den Betrieben schwanken zwischen 34 und 60 %. Psychomentale Beanspruchungen und psychosoziale Belastungen wurden als staerkste Praediktoren sowohl fuer koerperliche Beschwerden als auch fuer die Unzufriedenheit mit den Arbeitsbedingungen identifiziert. Schlussfolgerungen: Das vorgestellte, relativ einfach zu implementierende Befragungsinstrument verfolgt einen ganzheitlichen Ansatz im Rahmen eines betrieblichen Gesundheitsmanagements. Es konnte gezeigt werden, dass es in der Lage ist, sich dem komplexen Bedingungsgefuege von arbeitsbedingten koerperlichen Beschwerden sowie von Unzufriedenheit mit den Arbeitsbedingungen anzunaehern und eine Ausgangsbasis fuer erforderliche Massnahmen zur betrieblichen Gesundheitsförderung zu bilden. Psychosoziales Gesundheitsmanagement im Betrieb	Wolfgang Schneider, Michael Peschke	Literatur-nachweis	2011	Psychotherapeut	56	1	Studienziel	Nach einer Eroerterung von grundlegenden Praeventionskonzepten werden praeventive und rehabilitative Aufgabenstellungen und Ansatzze in der Arbeitswelt diskutiert. Dabei wird betont, dass insbesondere die Foerderung von psychosozialen Ressourcen auf der Ebene des Individuums und der Organisation eine zentrale Rolle bei der Praevention spielt. In einem naechsten Schritt werden die Grundprinzipien des Gesundheitsmanagements aufgezeigt und relevante psychosoziale Themenstellungen sowie Vorgehensweisen herausgearbeitet. Die verschiedenen Elemente eines systematischen Prozesses des Gesundheitsmanagements und der Implementierung sowie Evaluierung von Massnahmen werden expliziert, und es wird verdeutlicht, dass entsprechende Entwicklungen nur dann eine Chance in den Betrieben haben koennen, wenn sie qualitaetsgesichert sind und von allen wichtigen Akteuren der Organisation engagiert unterstuetzt werden. Dies gilt insbesondere fuer die Geschaeftsfuehrung, ohne deren Akzeptanz sich entsprechende Massnahmen in einem Betrieb oder Unternehmen nicht einfuehren lassen.	WISO

Public and private roles in plant health management	Alfons Oude Lansink	Journals	2011	Food Policy	36	2	keine Organisation	World-wide, government institutions play an important role in the management of plant health. This paper develops a conceptual framework in which suppliers and demanders jointly determine the optimal level of plant health in a hypothetical market. Next this paper argues that this market falls short of reaching an optimal plant health situation due to the public good nature of plant health and due to the presence of asymmetric information. A range of commonly applied and novel solutions to this market failure are then discussed.	ScienceDirect

Quality management and health: a double connection	Yvonne Lagrosen, Ingela Bäckström, Stefan Lagrosen	Journals	2007	International Journal of Quality & Reliability Management		24	1	-	Purpose – The purpose of this paper is to examine and discuss the effects of quality management in the health care sector and the general effects of quality management on the health of the employees. Design/methodology/approach – The empirical basis consists of three case studies in one industrial manufacturing company and two hospitals. The empirical data have been gathered with both qualitative and quantitative methods. Findings – The twofold value of quality management, of preventing disease by supporting more rewarding working conditions as well as improving the treatment of disease by increasing the effectiveness of health care organisations is indicated. Leadership commitment was found to be the most crucial common prerequisite for successful quality management implementation and for creating a healthy work environment. In addition, continuous improvements and participation of everybody were found to have importance for well functioning quality management as well as for health. Research limitations/implications – The paper provides additional understanding of the influence of quality management on health and a model is presented. A limitation is that the factors studied are fairly broad and for further research it will be useful to go deeper into the mechanics of them. Practical implications – The three factors, leadership commitment, participation of everybody, and continuous improvements, have been shown to be vital contributors for health and managers should make every effort to implement them. Originality/value – The double effect of quality management on health has not been studied before and knowledge of the factors contributing to it is valuable.	Emerald
Reducing Health Cost: health Informatics and Knowledge Management as a Business and Communication Tool	R Gayampoh-Vidgah, R Moreton, D Sallah	Artikel	2010	Information Systems			Studienziel	Health informatics has the potential to improve the quality and provision of care while reducing the cost of health care delivery. However, health informatics is often falsely regarded as synonymous with information management (IM). This chapter (i) provides a clear definition and characteristic benefits of health informatics and information management in the context of health care delivery, (ii) identifies and explains the difference between health informatics (HI) and managing knowledge (KM) in relation to informatics business strategy and (iii) elaborates the role of information communication technology (ICT) KM environment. This Chapter further examines how KM can be used to improve health service informatics costs, and identifies the factors that could affect its implementation and explains some of the reasons driving the development of electronic health record systems. This will assist in avoiding higher costs and errors, while promoting the continued industrialisation of KM delivery across health care communities.	Google Scholar	
Relationship between geneal health and manager's Leadership style and ist effect on staff's Job satisfaction in shiraz	K Banihashemiyani, JF Gloestan	Artikel	2011	Payavard			Sprache	Investigations have indicated that general health is associated with behavior style and interpersonal relationships. The present study was performed in order to investigate the relationship between general health and leadership style in managers at Shiraz University of Medical Sciences, and its effect on job satisfaction in staff. Materials and Methods: 33 managers and 132 staff were randomly selected. Participants completed Pourbانه leadership style, Goldberg general health and Herzberg job satisfaction questionnaires. In order to analysis data Pearson correlation coefficient, independent t test and Chi-square were used. Results: There is a positive relationship between manager's general health and their leadership style and also between manager's leadership style and job satisfaction in staff. Also there is no significant difference between numbers of managers in 4 kinds of leadership styles. Conclusion: Empathy, self awareness, high motivation and self confidence, are characteristics that cause positive relationship between general health and participative leadership style. These characteristics also increase self-confidence, motivation and thus increase job satisfaction in staff.	Google Scholar

Relationship between organisational structure and worksite health management in the information technology and communications sector	L Ansmann, J Jung, A Nitzsche, H Pfaff	Journals	2012	Gesundheitswesen	74	5	Studienziel	Worksite health management (WHM) can positively influence employee health and performance. However, it has not yet been comprehensively implemented in companies. This study aims to identify the role of organisational structures in the implementation of WHM. METHODS: In this cross-sectional study, data were collected on the companies' WHM and the organisational structure. Out of 522 randomly selected companies within the German information technology and communication (ITC) sector, one managing director for each company was being questioned through telephone interviews. Bivariate and multivariate logistic regression analyses were conducted. RESULTS: The results of the study reveal that the implementation of WHM is positively correlated with a large company size (OR 2.75; 95%-CI 1.10-6.88) and with the existence of an employee representation (OR 2.48; 95%-CI 1.54-3.98). Other structural characteristics, such as the employment of a company physician, the percentage of temporary workers as well as the staff's age and sex distribution do not seem to have a significant impact on the implementation of WHM. CONCLUSIONS: The results indicate that the implementation of WHM can only be explained to a certain degree by organisational structures. However, the findings highlight the fact that companies with few structural resources are in particular need of tailored support when implementing WHM.	PubMed

Ressourcen als Schlüssel für Führung und Gesundheit im Betrieb	Anja Orthmann, Rolf Ote	Literatur-nachweis	2011	Empirische Ergebnisse und Zukunftsaspekte im betrieblichen Gesundheitsmanagement			-	Auf der Grundlage einer empirischen Studie werden Charakteristika der Arbeitssituation von Fuehrungskraeften und ihre Auswirkungen auf ihr gesundheitliches Befinden analysiert. In der Fragebogenerhebung wurden 268 Fuehrungskraefte aus verschiedenen Unternehmen zu Arbeitsbelastungen und sozialen Belastungen, sozialen Ressourcen, Arbeitszufriedenheit und gesundheitlichen Beschwerden befragt. In Korrelationsanalysen wurde fuer soziale Ressourcen ein starker Zusammenhang mit der Arbeitszufriedenheit und ein geringer Zusammenhang mit der Gesundheit festgestellt. Im Anschluss an die Studie wurden die Ergebnisse genutzt, um Interventionen zur Personalentwicklung durchzufuehren. Diese resultierenden Massnahmen und ihre Erfolgsfaktoren sowie betriebliche Potenziale werden am Beispiel zweier beteiligter Unternehmen exemplarisch dargestellt.	WISO	
Review of Occupational health psychology	E Kevin Kelloway	Review	2011	Canadian Psychology	52	2	Studiendesign	Reviews the book, Occupational health psychology edited by Stavroula Leka and Jonathon Houdmont (see record 2010-10988-000). Leka and Houdmont describe their book as the first textbook devoted to occupational health psychology intended for undergraduate instruction in the field. Leka and Houdmont have chosen an interesting strategy in creating an edited textbook with individual chapters written by established experts in the field. In doing so, they have in many cases gotten "the best" people in a particular area to write chapters in their area of expertise. Despite their reliance on multiple authors, the editors have maintained a consistent style throughout the volume—each chapter begins with a chapter outline and ends with a chapter summary. Textboxes throughout are used to highlight individuals prominent in the field (e.g., Tom Cox) or to highlight applications and research issues and to provide definitions of key terms. I would expect that students will appreciate such pedagogical features in addition to the depth of expertise that underlies each chapter. Although not divided into sections, one can intuit a structure to the book that begins with a broad perspective on occupational health psychology and then progressively adopts a narrower focus. When I first heard of this book, I was pleased at the prospect of being able to assign a single textbook that would offer a survey of occupational health psychology. Although the authors met their explicit goal of covering the core education curriculum defined by the European Academy of Occupational Health Psychology, I am not convinced that they have produced a "stand-alone" text that provides an adequate coverage of the field. In particular, issues of workplace safety are strikingly absent from the text. Personally, I would feel the need to supplement this text with specific readings on issues of occupational safety and occupational disease in order to cover the major topics that comprise the field of occupational health psychology. Safety capital: management of organizational knowledge on occupational health and safety	Imanol Nunez, Mikel Villanueva	Journals	2011	Journal of Workplace Learning		23	1	Studienziel Purpose – The concept of Safety Capital was developed by analyzing the creation and composition of the Intellectual Capital embedded in Occupational Health and Safety (OHS) systems. The paper aims to address this relationship. Design/methodology/approach – By drawing a theoretical link for the relationship between OHS activities and intellectual capital, guidelines for the management of organizational knowledge on OHS systems are outlined. Findings – The paper shows that occupational health and safety should be considered among the sources of intellectual capital of the firm. Originality/value – The theoretical framework is a potential guide for substantial improvement of advanced OSH management systems, a key element to visualize incentives to invest in safety and a powerful instrument for research in intellectual capital quantification.	Emerald
Salutogenese durch Selbstverwirklichung	Simone Meller	Literatur-nachweis	2008	Psychologie und Bewegungswissenschaft				Studienziel Selbstverwirklichung zaehlt bislang nicht zu den gesundheitspsychologischen Leitbegriffen, das von ihr Bezeichnete findet im Hauptstrom allenfalls eine implizite Thematisierung, wie sich am Beispiel des Konstrukts des Kohaerenzgefuehls nachweisen laesst. Unabhaaengig vom spezifischen "Modell der Salutogenese" wird der Begriff der Salutogenese metatheoretisch verwendet und als komplementaer zur Pathogenese angesehen. Im Kontext von Personenlichkeit und Gesundheit werden Chancen und Risiken salutogenetischer Forschung aufgezeigt. Ausgehend vom wissenschaftlichen Dissens ueber die Definition von Gesundheit und nur scheinbar normfreier salutogenetischer Forschung (u. a. nachzuvollziehen an der blockierten Aufarbeitung des Nationalsozialismus) wird ein ganzheitliches Verstaendnis von Gesundheit und Krankheit entwickelt und mit quantentheoretisch-holistischen Ueberlegungen verknuepft. Es werden ausgewaehlte Experimente und Erkenntnisse der modernen Quantenphysik dargestellt und in ihrer Relevanz fuer das Leib-Seele-Problem beleuchtet. Verschiedene theoretische Ansaetze werden zu einer gemeinsamen, integrativen Denkfigur verbunden, die als triadisches Konzept der Selbstverwirklichung positioniert wird und die eine gegenstandsangemessene Beschreibung salutogenetischer Prozesse ermoeglichen soll. Ausgangspunkt ist selbstbestimmtes Handeln, das bei naeherer Betrachtung in Selbstverwirklichung und Selbstentfremdung unterteilt werden kann. Der wesentliche Unterschied zwischen beiden Formen der Selbstbestimmung liegt in der jeweiligen (Nicht-)Orientierung am wissenschaftlich umstrittenen, aber unumgaenglichen Konzept vom "wahren Selbst" und dessen (Nicht-)Beruecksichtigung in der realistischen Auseinandersetzung mit der Umwelt. Die resultierende Trias der Selbstverwirklichung bedeutet Selbstbestimmung unter permanenter Rekurrierung auf Prozesse der Selbstwerdung und Selbstrealisierung. Auf Basis der quantentheoretisch-holistischen Vorueberlegungen laesst sich fuer die komplementaeren Begriffspaare Selbstverwirklichung und Selbstentfremdung sowie Gesundheit und Krankheit das Prinzip der Nichtlokalitaet anwenden. Die in der Gesundheits-psychologie dominierende (Stress-)Bewaeltigungs-Hypothese wird integriert und ueberstiegen. Im triadischen Konzept der Salutogenese ist Gesundheit untrennbar mit einer dem Menschen zutiefst entsprechenden Lebensfuehrung verbunden, die sich nicht aus dem Befolgen von Vorschriften ergibt, sondern von innen heraus in stimmiger Weise entwickelt. Damit entstehen neue Perspektiven fuer die Praxis der Gesundheitsfoerderung und fuer die Anwendungsforschung. Theoriegeleitet wurde ein Fragebogen zur Erfassung von Selbstverwirklichung konstruiert. Bei der faktorenanalytischen Ueberpruefung des Operationalisierungskonzepts an zwei Stichproben und Validierungsberechnungen an den Konstrukten Kohaerenzgefuehl, Allgemeine Selbstwirksamkeit sowie am Inventar Klinischer Persoenlichkeitsakzentuierung ergab sich insgesamt eine Stuetzung der Annahme der Bedeutung des "wahren Selbst". In der Diskussion wird darauf erneut eingegangen, jedoch auch das gewaehlte methodische Vorgehen und die damit verbundene Engfuehrung werden problematisiert. Nach einem Forschungsausblick werden angesichts des laufenden Bologna-Prozesses fueuf Wuensche fuer das Fach Psychologie formuliert.	WISO

So I can Be Like a Whiteman': The Cultural Psychology of Space and Place in American Indian Mental Health	Joseph P. Gone	Journals	2008	Culture & Psychology	14	3		keine Organisation Careful analysis of a single ethnographic interview demonstrates that profound cultural divergences in Western professional and American Indian therapeutic traditions may well emanate from easily overlooked sources of ethnopysychological orientation and intelligibility, namely distinctive cultural psychologies of space and place. Interview responses from a middle-aged Native American Traditionalist on the Fort Belknap Indian reservation revealed that robust 'mental health' was seen to result from participation in indigenous ritual spaces enacted or performed in designated sacred places on or near the reservation. In contrast, this respondent observed that consultation by community members with 'White psychiatrists' in the local Indian Health Service clinic was an open invitation to 'brainwash me forever so I can be like a Whiteman'. For those American Indians who share the respondent's cultural standpoint, reservation-based mental health clinics, despite their intentional designation as therapeutic spaces, may be seen to function as sites of colonial incursion and Native resistance in cultural--and especially ethnopysychological--terms. This article explores the implications of this distinctive cultural psychology of space and place with regard to the interdisciplinary investigation of therapeutic landscapes and the promise of 'culturally competent' mental health services. Social exchange processes, health behaviour, and health behaviour change. Research ...	Urte Scholz, Rainer Hornung	Literatur-nachweis	2008	Zeitschrift für Gesundheitspsychologie	16	3		Studienziel The main research areas of the Social and Health Psychology Group at the Department of Psychology of the University of Zurich, Switzerland, are introduced. Exemplarily, 3 currently ongoing projects are described. The "Dyadic exchange processes in couples facing dementia" project examines social exchanges in couples with the husband suffering from dementia and is based on equity theory. This project applies a multi-method approach by combining self-report with observational data. The Swiss Tobacco Monitoring System (TMS) is a representative survey on smoking behavior in Switzerland. Besides its survey character, the Swiss TMS also allows for testing psychological research questions on smoking in a representative sample. The "Theory-based planning interventions for changing nutrition behavior in overweight individuals" project elaborates on the concept of planning. More specifically, it tests whether there is a critical amount of repetitions of a planning intervention (e.g., 3 or 9 times) in order to ensure long-term effects.	WISO
Social Identity, Health and Well-Being: An Emerging Agenda for Applied Psychology	S. Alexander Haslam, Jolanda Jetten, Tom Postmes, Catherine Haslam	Journals	2009	An International Review	85	1		Studienziel The social environment comprising communities, families, neighbourhoods, work teams, and various other forms of social group is not simply an external feature of the world that provides a context for individual behaviour. Instead these groups impact on the psychology of individuals through their capacity to be internalised as part of a person's social identity. If groups provide individuals with a sense of meaning, purpose, and belonging (i.e. a positive sense of social identity) they tend to have positive psychological consequences. The impact of these identity processes on health and well-being is explored in the contributions to this special issue. In this editorial, we discuss these contributions in light of five central themes that have emerged from research to date. These themes address the relationship between social identity and (a) symptom appraisal and response, (b) health-related norms and behaviour, (c) social support, (d) coping, and (e) clinical outcomes. The special issue as a whole points to the capacity for a social identity approach to enrich academic understanding in these areas and to play a key role in shaping health-related policy and practice. Standards für das Gesundheitsmanagement in der Praxis	Elisabeth Böhnke	Literatur-nachweis	2006					Studienziel Auf der Basis der Bestimmungen des Sozialgesetzbuches geht es um praktisches Gesundheitsmanagement in Unternehmen. Es wurden drei Teiluntersuchungen durchgeführt, zwei empirische Studien (Krankenhaus, Call-Center) und eine Literaturanalyse (Feuerwehr). Die erste Studie war eine Fragebogenerhebung zu verschiedenen Aspekten arbeitsbedingter Gesundheitsgefahren im Krankenhaus. Teilnehmer waren zum ersten Messzeitpunkt 97, zum zweiten Messzeitpunkt nach zwei Jahren 82 Krankenhausmitarbeiter verschiedener Ebenen. Als Hauptergebnis zeigte sich, dass es wegen einer unzureichenden Qualitaet und Verknuepfbarkeit gesundheitsrelevanter Daten und erheblicher Schwierigkeiten der internen Kommunikation und interdisziplinären Zusammenarbeit nicht befriedigend gelang, Erschwernisse und Behinderungen im Krankenhaus zu reduzieren. In der zweiten Studie standen arbeitsbedingte Gesundheitsgefahren in einem Call-Center im Vordergrund. Durchgefuehrt wurden insgesamt 180 Leitfadeninterviews (je 30 fuer die Berufsgruppen Mitarbeiter, Fuehrungskraefte, Betriebsaerzte, Fachkraefte fuer Arbeitssicherheit, Betriebliche Sozialberatung, Betriebsraete). Die Resultate erbrachten im Wesentlichen eine aehnliche Diagnose wie in der ersten Studie: Die interdisziplinaere Zusammenarbeit der verschiedenen Handlungstraeager erschien unbefriedigend und bedarf einer nachhaltigen Verbesserung, damit der Arbeits- und Gesundheitsschutz im Call-Center gewaehrleistet werden kann. Die dritte Studie war eine Literaturanalyse zu arbeitsbedingten Gesundheitsgefahren im (generell als gefaehrlich geltenden) Feuerwehrdienst. Es wurden ueber 200 einschlaegige internationale Zeitschriftenartikel ausgewertet. Hierbei wurde einerseits erkennbar, auf welchen Feldern fuer Menschen im Feuerwehrdienst tatsaechlich ueberdurchschnittliche Gefahren existieren, andererseits wurde deutlich, dass international gefundene Ergebnisse sich nicht ohne weiteres auf die Bedingungen in Deutschland uebertragen lassen. Aufgrund der Untersuchungserkenntnisse werden abschliessend themenbezogene Empfehlungen gegeben.	WISO
Status of occupational health elements in occupational safety and health management systems in Japan	Koji Mori, Takashi Kameda, Yuichi Kobayashi	Journals	2006	International Congress Series	1294			keine Organisation In order to investigate the status of occupational health elements in occupational safety and health management systems (OSHMSs) in Japan, and the reasons why they are often conducted outside OSHMSs, a questionnaire was sent to all listed company sites that had been certified as following the guidelines on OSHMS of either Japanese Ministry of Health and Labor by Japanese Industrial Safety and Health Association or those of the Occupational Health and Safety Assessment Series (OHSAS) 18001 as of October 2004. Although comprehensive occupational health services were provided, the rates at which they were operated within an OSHMS were quite different between programs for technical or resource reasons. We concluded that it is necessary to develop a model system in which safety and health programs are well balanced, and to train OH professionals including professional occupational physicians who can play significant roles in OSHMSs in Japan. Steuerung des Betrieblichen Gesundheitsmanagements mit der Balanced Scorecard - Forschungsstand ...	Birgit Köper, Joachim Vogt	Literatur-nachweis	2011					Studienziel Auf der Grundlage theoretischer Ueberlegungen sowie einer Fallstudie soll aufgezeigt werden, wie Betriebliches Gesundheitsmanagement (BGM) mit dem Unternehmenserfolg verbunden werden kann. Im Rahmen der Fallstudie wurden Steuerungsmoeglichkeiten im BGM eines grossen produzierenden Unternehmens analysiert. Das dabei eingesetzte Steuerungsverfahren basiert auf dem Grundprinzip der Balanced Scorecard (BSC). Das Steuerungskonzept und seine Anwendbarkeit werden beschrieben, und es werden Moeglichkeiten aufgezeigt, Wirkungsmechanismen zu identifizieren. Bei einem deutschen Automobilhersteller wurden 31 halbstrukturierte Interviews mit Managern und Verantwortlichen des betriebsaerztlichen Dienstes gefuehrt, 428 Werksarbeiter bearbeiteten einen Fragebogen zu folgenden Bereichen: (1) Demographie, (2) Arbeitszufriedenheit, (3) Gesundheit und Wohlbefinden, (4) Zufriedenheit mit den Massnahmen des BGM und der Fuehrung. Ausserdem wurden die Erfolgsdaten der Finanzebene erhoben. Die Ergebnisse werden als eine Bestaetigung der Nutzbarkeit des hier vorgestellten BSC-Konzepts als Evaluations- und Steuerungsinstrument fuer BGM interpretiert.	WISO

Strategies for Integrating Quality, Environmental, Safety and Health Management Systems	Musli Mohammad, Mohd Rasid Osman, Rosnah Mohd Yusuff, Ibrahim Masood, ...	Literatur-nachweis	2013	3rd International Conference on Mechanical & Manufacturing Engineering			Studienziel	This paper discusses the strategies for integrating Quality, Environmental, Safety and Health Management Systems based on survey and case studies results. Questionnaires were distributed to 87 companies that certified with both ISO9001 and ISO14001. Meanwhile, three case studies were conducted at the manufacturing companies that have integrated several management systems. There are two ways of integrating the management systems which are: (1) consecutive implementation of management systems followed by integration or (2) integrate the management systems simultaneously from the beginning. Based on survey and case studies, it was found that many organisations started with implementing individual management system first, and then followed by integrating the management systems. Almost all the survey respondents agreed that the sequence should start with establishing Quality Management System first, and then integrate with Environmental Management System and followed by Occupational Health and Safety Management System. Strategisches Leistungs- und Gesundheitsmanagement	Burkhard Schmidt, Michael Kastner	Literatur-nachweis	2012				Studienziel	Anhand einer Fallstudie wird ein Konzept fuer ein strategisches, ganzheitliches Leistungs- und Gesundheitsmanagement (LGM) vorgestellt. Es wird betrachtet, welche Inhalte von besonderer Relevanz sind und wie man anhand einer Gesundheits-Balanced-Scorecard einen nachhaltigen Einsatz in Organisationen ermoeeglichen kann.	WISO
Strategisches Netzwerkmanagement als Zukunftsaufgabe im betrieblichen Gesundheitsmanagements	Anja Hocke, Burkhard Schmidt, Michael Kastner, Anja Borowczak, Jen Bucksch	Literatur-nachweis	2010				Studienziel	Zur Foerderung von Gesundheit und Leistung der Mitarbeiter in Deutschland und somit zur Ermoeeglichung eines dauerhaften Unternehmenserfolgs wird die Unabdingbarkeit einer Vernetzung verschiedener Akteure (Unternehmen, Krankenversicherung, Rentenversicherung, Aerzte, Vereine, Staat usw.) im betrieblichen Gesundheitsmanagement diskutiert. Zunaechst wir betont, dass die betriebliche Gesundheitsfoerderung vor dem Hintergrund gegenwaertiger Veraenderungen der soziooekonomischen Bedingungen und tiefgreifender Umgestaltungsprozesse im Wirtschafts- und Gesundheitsmanagement sowie der Bedeutung des Arbeitsplatzes als gesundheitsbezogenes Handlungsfeld eine erhebliche Rolle spielt. Um die Gesundheit von Mitarbeitern am Arbeitsplatz praeventiv zu foerdern, muessen alle Akteure ausgebildet werden, und es sollten strukturelle Voraussetzungen (funktionierende Vernetzung) entwickelt werden, um eine Zusammenarbeit zu ermoeeglichen. Mit Hilfe einer systemvertraeglichen Organisationsentwicklung, die Idealentwicklung, Realdiagnose, Diskrepanzanalyse, Strategie, Intervention, Praevention, Innovation, Controlling und Lernen beinhaltet, kann ein synegoistisches Netzwerk implementiert werden. Ein solches Netzwerk wird zur Illustration beispielhaft mit Inhalten aus der Praxis gefuellt und erlaeuert, um zu verdeutlichen, dass man fuer jeden Akteur ein solches Netzwerk untersuchen muss, um am Ende die Vernetzungen so zu optimieren, dass das Gesamtsystem alle moeglichen Synergien/Uebereinstimmungen der verschiedenen Akteure beinhaltet. Um die aktuelle Situation bereits bestehender Vernetzungen im Gesundheitswesen zu untersuchen, wurden diverse Befragungen durchgefuehrt. Zusammenfassend wurde dabei deutlich, dass vorhandene Netzwerke eher kurzfristig vorliegen und auf Projektbasis bestehen. Workshops fuer die unterschiedlichen Akteure, mit dem Ziel Information ueber moegliche Vernetzungen und Optimierungsmoeglichkeiten zu geben sowie Aufschluss ueber Erfahrungen mit Vernetzungen zu erlangen, wurden durchgefuehrt. Es wird festgehalten, dass Netzwerke im Rahmen des betrieblichen Gesundheitsmanagements in Deutschland noch wenig ausgereift sind, dass jedoch der Vernetzungswille zwischen den Akteuren angestiegen ist. Fuer Unternehmen wird es als unabdingbar erachtet, mit Hilfe eines ganzheitlichen (ueber verschiedene Schnittstellen hinweg), systemvertraeglichen (nicht durch Egoismen gestoert) und nachhaltigen betrieblichen Gesundheitsmanagement dem Wettbewerb auf dem Markt stand zu halten.	WISO

Stress- und Gesundheitsmngement bei Existenzgruendern. Ein typendiagnostischer ...	Ulf Kieschke, Uwe Schaarschmidt	Literatur-nachweis	2007				Studienziel	Berichtet wird ueber eine empirische Studie zum Stress- und Gesundheitsmanagement von Existenzgruendern. In der Untersuchung wurde das "Arbeitsbezogene Verhaltens- und Erlebensmuster" (AVEM) eingesetzt, das neben einer Einzelskalenauswertung die Zuordnung der Probanden zu clusteranalytisch gewonnenen Typen erlaubt. Im Mittelpunkt der Studie standen vor allem jene Typen, die klare gesundheitspsychologische Implikationen haben. In einer Laengsschnittstudie wurden zu zwei Zeitpunkten Daten von Existenzgruendern (632 bzw. 225 Personen) erhoben. Gefragt wurde nach den persoelichen Ressourcen und Kompetenzen, mit denen ein Gruender den Anforderungen des Berufsweges gegenuebertritt. Die Art der individuellen Bewaeltigung wurde mit Hilfe des AVEM erfasst. Am haefigsten trat das durch Engagement, Kompetenzerleben und Wohlbefinden gekennzeichnete "Gesundheitsmuster" G auf. Doch kam auch dem "Risikomuster" A erhebliche Bedeutung zu. Letzteres ist durch die Tendenz zur exzessiven Selbstueberforderung in Verbindung mit eingeschraenkter Zufriedenheit charakterisiert. Der Anteil dieses Risikomusters verringerte sich im Laufe der Zeit nicht wesentlich. In der Diskussion der AVEM-Befunde wird daufuer plaediert, dieser laengsschnittlich stabilsten Risikokonstellation im Rahmen von psychologischer Unterstuetzung fuer Existenzgruender vermehrt Aufmerksamkeit zu schenken. Successful Management Methodologies for Achieving Co-Worker Health in a Large Organization	Asa Wreder	Journals	2007	Total Quality Management & Business Excellence	18	7	Studienziel	Today, many organizations experience problems with high levels of sick leave. This has negative implications on the organizations' ability to compete on the market, but also means suffering for the individual employees. The leadership of the organization is considered by several researchers to impact on employee health and competitive advantage. However, it is argued that the larger an organization gets, the harder it is to apply good leadership. Therefore, the purpose of this paper is to describe how management in a large Swedish bank, awarded as 'Sweden's best workplace', has successfully worked to transform increasing levels of sick leave into co-worker health and profitability. The paper also includes suggestions that managers in other organizations might consider adopting. Through interviews, with managers at different organizational levels of the bank, management methodologies and success factors have been identified. The commitment of the bank's managers seems to have been central to achieve a healthy and efficient organization. Executive managers have had a conspicuous strategic focus on health issues and set objectives thereafter. These objectives have been deliberately supported by the managers' methodologies and successfully passed on throughout the organizational hierarchy to the bank offices. Dialogues, delegation and clear goal setting seem to have been important methodologies. Middle managers in addition have been lucid coaches to office managers, who in turn have put focus on building relationships and encouraging employees.	EBSCO
Supportive Leadership: Führungskultur und Gesundheitsmanagement	Wernre Fürstenberg	Literatur-nachweis	2011	Wirtschafts-psychologie aktuell	18	4	Studiendesign	Am Beispiel des Konzerns Unilever, der mit dem Corporate Health Award 2010 für vorbildliche Ansätze zur Verbesserung der Gesundheitskultur ausgezeichnet wurde, wird erläutert, wie Führungskräfte eine Kultur des Kümmerns und Achtsamkeit schaffen und pflegen können, um die Gesundheit ihrer Mitarbeiter zu erhalten. Dazu wurden Workshops mit den Führungskräften durchgeführt, in deren Mittelpunkt die Verantwortung der Führungskräfte für die Gesundheit ihrer Mitarbeiter stand und die Verantwortung jedes einzelnen Mitarbeiters für seine eigenes Wohlbefinden sowie die Verantwortung der Geschäftsführung thematisiert wurden. Die Führungskultur wird in den Workshops von den Führungskräften selbst erarbeitet. Es geht um Fragen, wo im Arbeitsalltag Führungskräfte Einfluss nehmen können, Mitarbeiter inspirieren und deren Potenziale entfalten können, Stärken und Talente erkennen können und Gespräche führen können. Das Ziel ist das sogenannte Supportive Leadership, mit dem verhindert werden kann, dass die Mitarbeiter frustriert werden und ihre Leistungsfähigkeit eingeschränkt wird. Zentral dabei ist, die Eigenverantwortung und Selbstständigkeit der Mitarbeiter zu betonen, damit diese ihr Potenzial optimal erfüllen können. Dazu schreibt Supportive Leadership keine Verhaltensweisen vor, vielmehr wird eine Kultur erzeugt, in der Gesundheit einen Wert darstellt.	WISO
Survey on Health, Productivity, and Absence Management Programs		Periodical	2008	Medical Benefits	25	16	Studiendesign	The article offers information on the results of the survey concerning health, productivity, and absence management programs in the U.S. It reveals that almost two-fifths of the respondents have strongly considered employee health as core value of their organization. The survey also indicates that more than half of the respondents refer the improvement of productivity and reduction in the number of unplanned absences as the top priority for their health management program. The Ascension Health journey to zero: lessons learned and leadership	A Hendrich, AR Tersigni, S Jeffcoat, CJ Barnett, LP Brideau, D Pryor	Journals	2007	Jt Comm J Qual Patient Saf	33	12	Studienziel	In 2002, Ascension Health, a 65-hospital nonprofit health care system, articulated a call to action to provide Healthcare That Works, Healthcare That Is Safe, and Healthcare That Leaves No One Behind. The goal is to provide excellent clinical care with no preventable injuries or deaths by July 2008. Just months from this target date, substantial reductions in events related to eight priorities for action have been documented, and at the current rate more than 2,000 lives a year are being saved compared to the baseline mortality rate. BUILDING THE AGENDA FOR CHANGE: Progress toward the goal of zero preventable injuries or deaths required transformational change. Key steps toward this change included establishing a sense of urgency, creating a guiding coalition (the clinical excellence team), and developing the Destination Statement II. Other key factors in our early success included methods of process and outcomes measurement, the formation of appropriate and diverse leadership groups comprised of primary stakeholders, methods of knowledge transfer, and the involvement and leadership of the Ascension Health Quality Committee and individual health ministry Boards. THE JOURNEY CONTINUES: An ongoing discussion of what "zero preventable deaths and injuries" really means has led to the identification of additional interventions to further reduce preventable injuries and deaths. The Business Value of Health Management	Gerad Zwetsloot, Frank Pot	Journals	2004	Journal of Business Ethics	55	2	Studienziel	For organizational development that is future-oriented, enterprises increasingly need qualified, motivated and efficient workers who are able and willing to contribute actively to technical and organizational innovations. Furthermore, customers and consumers are increasingly interested in healthy products and services. Therefore, health has become a (potential) business value of strategic importance. In interaction with all relevant stakeholders, an approach was developed for companies that want to manage their health impact in a proactive and preventive manner. The approach was termed Integral Health Management (IHM). IHM forms a strategic approach for reducing the costs of sickness absence and working disability, while the productivity and resilience of the company and its employees are increased. This brings the company direct economic benefits. Finally, it is of prime interest for employees to remain physically and mentally healthy and employable. The IHM approach distinguishes seven lines of development: (1) health as a strategic company interest; (2) the realization of a healthy primary process; (3) a safe and sound physical (work) environment; (4) an inspiring social (work) environment; (5) vital people; (6) a sound relationship with the immediate organizational environment and local community, and (7) healthy products and/or services. The inter-relationships between the seven development lines are essential for combining an improvement of the business impact on health with a strategic interest of companies and organizations. The seven lines of IHM development can easily be linked to the European Foundation for Quality Management's European Excellence Model.	EBSCO
The Consumer Case For Personal Health Management Systems	Michael Critelli	Periodical	2011	Forbes			Studien-teilnehmer	The article emphasizes the benefits of personal health management systems to patient outcome in the U.S. It points out the inability of the health care system to micromanage the health of patients. Also noted is the importance of comprehensive cumulative information to health management. In the author's view, remote health management will benefit from personal health records.	EBSCO
The emergence of positive occupational health psychology	AB Bakker, A Rodríguez-Monoz, D Derks	Journals	2012	Psicothema	24	1	Studiendesign	The aim of this paper is to provide an overview of the emerging concept of Positive Occupational Health Psychology (POHP). We discuss the usefulness of focusing on positive constructs in order to understand the path to health and well-being at work. We describe research findings on several POHP topics, including engagement, psychological capital, and job crafting. Additionally, we review the first positive interventions in this field and conclude by identifying some specific questions for future research.	PubMed
The Employer's Case for Health Management	Christopher H. Coulter	Journals	2006	Benefits Quarterly	22	1	-	Employers' past solutions to rising health benefit costs--adopting managed care strategies, cost shifting to employees and reducing benefits--are no longer effectively controlling costs and are depressing the value of health benefits for employee recruitment and retention. An alternative strategy is to implement health management approaches that improve the health status of employees. These programs reduce medical costs and have a documented positive impact on workers' compensation, disability costs, absenteeism and productivity. Further, this approach is complementary to health care consumerism as a strategy for health improvement and benefit cost reduction and results in improved employee health, outlook and satisfaction. The Future of Health Psychology Interventions	Perry M Nicassio, Beth E Meyerowitz, Robert D Kerns	Journals	2004	Health Psychology	23	2	Studiendesign	Progress in health psychology interventions was reviewed to manage chronic illness, treat psychophysiological disorders, and provide complementary treatment for difficult medical symptoms. A closer synergy between research, clinical applications and public policy, and education and training was advocated to guide future work in these areas. Further, the importance of clinical input informing research directions, the need for interventions to focus on a broader range of individual difference and contextual factors, and for effectiveness studies to influence the adoption of treatments in clinical settings was emphasized. In accordance, greater effort should be devoted to disseminating information on treatment effectiveness to professional and lay groups to maximize the public health benefit of established intervention approaches. The Future of Occupational Health Psychology	Wilmar B. Schaufeli	Journals	2004	Applied Psychology: An International Review	53	4	Studienziel	Taking into account the changing nature of work, three future topics for occupational health psychology were identified: (1) surveillance of workplace characteristics; (2) research on effects of organisational practices; (3) intervention research. Furthermore, five types of research in occupational health psychology are distinguished, each of which may contribute in its own specific way to future developments in the field: (1) explanatory research (e.g. conceptual development of job stress models, development of a personal agency perspective); (2) descriptive research (e.g. epidemiological studies, relationships with objective organisational parameters); (3) tool development (e.g. standardisation of job stress questionnaires, benchmarking); (4) intervention research (e.g. the use of more rigorous research designs, evaluation of cost-effectiveness); (5) organisational change (e.g. more systematic accounts of change projects, more attention for implementation of projects). Finally, the necessity of a paradigm shift from a disease model towards a genuine health model is emphasised so that occupational health psychology may develop in future in a more balanced way.	EBSCO

The hole in health management	Sean Fogarty	Periodical	2013	Employee Benefit Adviser	11	2	Studiendesign	The article focuses on the role of behavioral health in overall employee wellness efforts. It cites that behavioral health is considered a hole in population health management (PHM) strategy. It asserts that employers can optimize their health delivery model by connecting an employee assistance program (EAP). Direct medical costs can be reduced by employers by marketing the EAP as an entry point into mental health or substance abuse of the group health plan.	EBSCO
The impact of management programs on physicians' work environment and health: A prospective, controlled study comparing different interventions	Pia Jansson von Vultée, Bengt Ametz	Journals	2004	Journal of Health Organization and Management	18	1	-	Female physicians have less influence over their daily work conditions and exhibit slower career advancement as compared to their male colleagues. The aim of this study is to assess the impact on individual and organizational well being from different kinds of management programs. Female physicians participating in management intervention programs were compared with a reference group of matched physicians and sickness absenteeism was significantly lower in the intervention group. No significant differences were found between the groups with regard to career advancement, individual, organizational and professional well being. Health care organizations spend a substantial amount of resources on management programs in order to improve leadership, autonomy and the work-environment of physicians in times of increasing discontent among this key group of health care employees. Our study indicates some beneficial health effects from structured management programs but there is a need to develop and assess the efficacy of these programs further.	Emerald
The occupational safety and health scorecard - a business case example for strategic management	B Koeper, K Möller, G Zwetsloot	Artikel	2009	Scandinavian journal of work			Studienziel	Application of Balanced Scorecard in health management	Google Scholar
The psychology of Organizational Structure in integrated health systems	Daniel K Zisner	Journals	2011	Physican Executive	37	3	Studienziel	The article examines a social learning theory model as a framework in guiding health system leaders as they are considering the psychology of organizational design pertaining to the successful integration in the U.S. It states that the psychology of the physician component of integrated health systems determines the success of failure in the health care market place. It focuses on the importance of organizational design which is a determinant of the cultural well-being of the organization.	EBSCO
The Real Potential in Proactive Health Management	Scott macStravic	Journals	2008	Marketing Health Services	28	1	Studiendesign	The author reflects on the issue of proactive health management programs for employees. He suggests that in addition to reducing medical and health care costs the programs pay off to employers in many other ways. He argues that the financial benefits for employers of using the programs in 2008 is greater than was generally recognized in the past.	EBSCO
The relationship between leadership support, workplace health promotion and employee wellbeing in South Africa	K Milner, M Greyling, R Goetzel, R da Silva, T Kolbe-Alexander, D Patel, C Nossel, M Beckowski	Journals	2013	Health Promot Int.			-	Leadership support has been identified as an essential component of successful workplace health promotion (WHP) programs. However, there is little research in this area and even less theoretical conceptualization on ways in which leadership support for WHP is related to improved employee wellbeing. In this paper, we developed and tested a model of leadership support for WHP and employee wellbeing outcomes using employer and employee data gathered from 71 South African organizations. A theoretical model based on social exchange theory was developed. It was hypothesized that perceptions of company commitment to health promotion mediates the relationship between leadership support, the provision of WHP facilities and employee wellbeing. A hierarchical structural equation modeling technique was used to test the model. We determined that leaders' support for WHP was important insofar as they also provided health promotion facilities to their employees. No direct relationship was found between leadership support alone and employee wellbeing.	PubMed
The right to health is coming of age: evidence of impact and the importance of leadership	F Bustreo, P Hunt	Journals	2013	J Public Health Policy	34	4	keine Organisation	At this year's high-level session of the World Health Assembly, the right to the highest attainable standard of health was mentioned by Ministers of Health more often than at any recent meeting of the Assembly.1 Nepal's Minister of Health and Population confirmed that his country has adopted a rights-based approach to health. The South African Minister of Health spoke about health care as 'a birth right'. Colombia's Assistant Health Minister called for a 'global effort for the development and effective universalization of the human right to health'.	PubMed
The State of the Psychology Health Sector Provider Workforce	Daniel S Michalski, Jessica L Kohout	Journals	2011	American Psychologist			Studienziel	Numerous efforts to describe the health service provider or clinical workforce in psychology have been conducted during the past 30 years. The American Psychological Association (APA) has studied trends in the doctoral education pathway and the resultant effects on the broader psychology workforce. During this period, the creation and growth of the PsyD degree and the formalization of the predoctoral internship placement system (the APPIC Match) have been well noted, but efforts to gain a complete understanding of professional practice are lacking. Specifically, piecemeal research on the provider workforce has led to the study of specific subpopulations using varying approaches and definitions of those providing direct clinical service. Consequently, estimates of the supply and need for health service providers are distinctly divergent and generate protracted debate in organized psychology. The APA membership directory and the APA Doctorate Employment Surveys have traditionally been relied on for workforce analyses. Yet, these data have become characterized by limited generalizability in recent years because of declining survey response rates and the fact that APA member data may not be as representative of the entire psychology health service provider population as they were previously. The 2008 APA Survey of Psychology Health Service Providers targeted these limitations by including nonmember psychologists in the sampling frame. Results revealed emerging themes in the demographics, work settings, and delivery of health services of the psychology health service provider workforce. Future areas of research for APA and organized psychology to undertake in addressing need and demand are suggested.	ERIC
The Use of Incentives for Health Management and Wellness on the Rise		Periodical	2008	Occupational Hazards	70	9	Studiendesign	The article reports on the results of a survey indicating the increasing popularity of using incentives for health management and wellness in the U.S. The survey, conducted by the ERISA Industry Committee, the National Association of Manufacturers and IncentOne Inc. showed an increase from 62 to 71 percent in the number of U.S. employers who are using incentives for employee health promotion. The use of tacit knowledge in occupational safety and health management systems	D Podgórski	Journals	2010	Int J Occup Saf Ergon	16	3	Studiendesign	A systematic approach to occupational safety and health (OSH) management and concepts of knowledge management (KM) have developed independently since the 1990s. Most KM models assume a division of knowledge into explicit and tacit. The role of tacit knowledge is stressed as necessary for higher performance in an enterprise. This article reviews literature on KM applications in OSH. Next, 10 sections of an OSH management system (OSH MS) are identified, in which creating and transferring tacit knowledge contributes significantly to prevention of occupational injuries and diseases. The roles of tacit knowledge in OSH MS are contrasted with those of explicit knowledge, but a lack of a model that would describe this process holistically is pointed out. Finally, examples of methods and tools supporting the use of KM in OSH MS are presented and topics of future research aimed at enhancing KM applications in OSH MS are proposed.	PubMed

Theoriebasierte Strategien und Interventionen in der Gesundheits-psychologie	B Schütz, B Renneberg	Buch	2006	Gesundheits-psychologie			Studiendesign	Die aktuelle Gesundheits-psychologie bietet eine Reihe von Theorien und Modellen, die in Maßnahmen zur Förderung von gesundem Verhalten und zur Verbesserung des individuellen Umgangs mit Stress umgesetzt werden können. Solche Maßnahmen, die sich in Konzeption und Durchführung auf die Befunde gesundheitspsychologischer Forschung berufen, lassen sich besser evaluieren und interpretieren als theoriefreie Maßnahmen. Dennoch sind auch den Möglichkeiten von theoriebasierten Interventionen Grenzen gesetzt, vor allem bei gesundheitsrelevanten Verhaltensweisen mit Suchtcharakter wie Rauchen, Alkohol- oder sonstiger Drogenmissbrauch, oder stark emotional besetzten Verhaltensweisen. Interventionen, die auf die Erhöhung persönlicher Risikowahrnehmung setzen, sind eher bei Personen wirksam, die sich noch keine Gedanken über eine Verhaltensänderung gemacht haben. Personen, die sich vorgenommen haben, ihr Verhalten zu ändern, profitieren mehr davon, wenn sie genaue Pläne dazu aufstellen oder Unterstützung zur Selbstbeobachtung bekommen. Maßnahmen, die auf eine Erhöhung der Selbstwirksamkeit abzielen, sollten alle Personen dabei unterstützen, ihre Verhaltens weisen zu ändern.	Google Scholar
Total health management draws from multiple channels	Molly Bernhart	Periodical	2007	Employee Benefit News	21	1	Studienziel	The article focuses on how New Mexico-based Presbyterian Healthcare System achieved a positive return on investment from its chronic disease management program. The program is centered on chronic conditions such as diabetes and anti-coagulation with a goal of reducing medical costs. The company's implementation of a continuum team has improved health outcomes and received positive feedback. It uses Docsite Inc.'s electronic health registry in managing patients' chronic conditions and clinical test results.	EBSCO

It describes an approach to invest in employee health that encompasses a broad spectrum of health management to health benefits, safety and disability to occupational health and return-to-work programs. It cites a study on health found which shows that companies with the most effective health and productivity strategies experienced a 2.4 percent health care cost trend.	EBSCO
Towards a cross-context identity management framework in e-health	Mina Deng, Danny De Cock, Bart Preneel	Journals	2009	Online Information Review		33	3 Studienziel	Purpose – Modern e-health systems incorporate different healthcare providers in one system and provide an electronic platform to share medical information efficiently. In cross-context communications between healthcare providers, the same information can be interpreted as different types or values, so that one patient will be issued different identifiers by different healthcare providers. This paper aims to provide a solution to ensure interoperability so that multiple healthcare providers will be able to collaborate in one e-health system. Design/methodology/approach – This paper primarily focuses on how different healthcare providers, instead of the patients, are able to interact and share information on a common e-health platform. Findings – In the course of the work, it was found that previous e-health solutions mainly have a limited view of patient information, where a user-centric approach for identity management is usually restricted to a single healthcare provider. Interoperability in an e-health system becomes more problematic when more actors collaborate, and hence linkability from one context to another should not be straightforward. However, some form of linkability, such as the possibility to follow up a patient's medical treatment, is desirable in the e-health sector, even when it needs to cross different contexts. Therefore, the authors have designed an identity management mechanism to ensure semantic interoperability when data is exchanged among different authorized healthcare providers. Research limitations/implications – The paper points out that the next generation of e-health will move towards federated e-health and will require user-centricity and transparency properties so that patients are able to specify and verify the disclosure of their medical information. Originality/value – This paper proposes a new service for cross-context identity management in e-health systems, improving interoperability between agencies when context-specific information is transferred from one healthcare provider to another. How the proposed cross-context identity management service can be integrated in an e-health system is explained with a use case scenario.	Emerald

Transformational leadership moderates the relationship between emotional exhaustion and turnover intention among community mental health providers	AE Green, EA Miller, GA Aarons	Journals	2013	Community Ment Health	49	4	Studienziel	Public sector mental health care providers are at high risk for burnout and emotional exhaustion which negatively affect job performance and client satisfaction with services. Few studies have examined ways to reduce these associations, but transformational leadership may have a positive effect. We examine the relationships between transformational leadership, emotional exhaustion, and turnover intention in a sample of 388 community mental health providers. Emotional exhaustion was positively related to turnover intention, and transformational leadership was negatively related to both emotional exhaustion and turnover intention. Transformational leadership moderated the relationship between emotional exhaustion and turnover intention, indicating that having a transformational leader may buffer the effects of providers' emotional exhaustion on turnover intention. Investing in transformational leadership development for supervisors could reduce emotional exhaustion and turnover among public sector mental health providers.	PubMed
Transforming health systems through collaborative leadership: Making change happen!	M MacPhee, M Paterson, M Tassone, D Marsh, S Berry ...	Artikel	2013				Studienziel	The Canadian Interprofessional Health Leadership Collaborative (CIHLC) is a multi-institutional partnership whose goal is to develop, implement, evaluate and disseminate an evidence-based collaborative health leadership programme. This paper describes evidence from four arms of research.	Google Scholar
Trends in Mental Health Cost Growth: An Expanding Role For Management?	Richard G. Frank, Howard H. Goldman, Thomas G. McGuire	Journals	2009	Health Affairs	28	3	keine Organisation	Mental health spending attracts attention from payers and policymakers. Historically, the public sector paid directly for a good deal of care, and special institutions and rules governed private-sector spending. During 1971-2002, spending on mental health care grew at much lower rates than spending on other health care. In recent years, the delivery and financing of mental health care have come to look more like those for general health care. We show that in spite of this convergence, important differences remain between general health and mental health care in patterns of spending growth.	EBSCO
Type-A Personality and Job Satisfaction: Two Scales for Job Stress and Health Psychology Research	AD Batigün, NH Sahin	Artikel	2006	Türk Psikiyatri Derg			Studienziel	The purpose of the present study is to obtain the reliability and validity information on two scales, Type-A Personality and Job Satisfaction, developed to be used in studies on work stress. Method: The data were collected from two different samples, one composed of individuals working in public and private banks (N= 426), the other from those working in the distribution department of a private firm (N= 94). For both samples, the Stress Symptoms and Vulnerability to the Stress subscales of the Stress Audit were used, along with Ways of Coping Inventory, Job-Satisfaction and Type-A Personality Scales. Findings: The factor analyses conducted on the two scales, revealed 4 factors for the Type-A Personality Scale, and 6 factors for the Job Satisfaction Scale. The factor-based subscales were found to have Cronbach's alpha's ranging between .40 and .90 for the Type-A Personality Scale and between .53 and .94 for the Job Satisfaction sub-scales. In addition to the Cronbach's alpha's, criterion validity values were also obtained. Result: The analyses conducted showed both scales to have satisfactory reliability and validity coefficients. Key Words: Stress, Job satisfaction, Type-A personality	Google Scholar
Überblick über die Gesundheits-psychologie	Ralf Schwarzer	Literatur-nachweis	2005				Studiendesign	In einem allgemeinen Überblick über die Gesundheits-psychologie wird die gesundheitspsychologische Forschung anhand einiger exemplarischer Fragestellungen einführend charakterisiert. Dabei werden folgende Fragestellungen besprochen: (1) Persönlichkeit und Krankheit, (2) Stress und Stressbewältigung, (3) protektive Ressourcen, (4) Gesundheitsverhalten, (5) Gesundheitsförderung. Abschliessend wird die historische Entwicklung der in den 70-er Jahren des 20. Jahrhunderts entstandenen Gesundheits-psychologie skizziert. Es wird darauf hingewiesen, dass die Gesundheits-psychologie auf dem Weg ist, sich auch in der klinischen Praxis durchzusetzen.	WISO
Umwelt- und Gesundheits-psychologie - zwei Seiten einer Medaille?	Heide Ittner, Elisabeth Kals, Markus Müller	Literatur-nachweis	2008				Studienziel	Die psychologische Forschung zu grundlegenden Aspekten des Gesundheits- und Umweltschutzes - und ihrer Vereinbarkeit - wird im Überblick erörtert. Zunächst werden die Begriffe "Umwelt" und "Umweltpsychologie" erläutert. Es wird betont, dass zwischen Umwelt und Gesundheit aus Sicht der Umweltpsychologie eine sehr enge Verbindung besteht. In einem Exkurs wird der Ansatz der Umweltmedizin umrissen, und es wird danach gefragt, inwieweit Gesundheitsschutz Motivation für Umweltschutz sein kann. Es wird auf Forschungsbefunde hingewiesen, nach denen die Rolle des Gesundheitsschutzes (als entscheidender Motivator für individuelles umweltschuetzendes Handeln) massiv überschätzt wurde und immer noch wird. Anschliessend wird der Gesundheitsbegriff definiert, grundlegende Inhalte und Herangehensweisen der Gesundheits-psychologie werden benannt, und die Rolle der Umwelt in der Gesundheits-psychologie wird unter besonderer Berücksichtigung der Public Health-Forschung besprochen. Ein wesentlicher Grund dafür, warum Gesundheit und Umwelt in der bisherigen Forschung noch nicht in ausreichendem Masse verknüpft worden sind, wird darin gesehen, dass beide Disziplinen noch sehr jung sind. Zukünftige Forschungsperspektiven werden abschliessend aufgezeigt.	WISO
Understanding the context of workplace health management as it relates to workplace bullying	Michael Sheehan, John Griffiths	Journals	2011	International Journal of Workplace Health Management		4	1 Studiendesign	Purpose – The purpose of this paper is to extend awareness that workplace bullying impacts on the health of individuals both within and outside the workplace and that there are implications for workplace health management. Design/methodology/approach – The paper contextualises the problem of workplace bullying and workplace health management and introduces the five articles in the special issue. Findings – Workplace health management is becoming more prominent in some organizations and workplace health management, and a corporate culture based on partnership, trust and respect, offers considerable potential to move the agenda forward. Moreover, there appears to be a paucity of knowledge available as to how workplace health management strategies and programmes impact on organizational culture and assembling and sharing such a knowledge base could be a useful step. Research limitations/implications – Further research is required to extend the studies presented and to address workplace bullying from the perspective of workplace health management. Practical implications – Research is required to explore the extent to which the potential of workplace health management programmes to impact positively on corporate approaches to bullying and harassment has been realised and how those programmes have influenced corporate culture. Social implications – A partnership approach to knowledge creation and sharing has the most potential for successful outcomes and accords closely with the inferred ideals of the Luxembourg Declaration for Workplace Health promotion. Originality/value – The paper addresses a perceived gap in the literature linking workplace bullying to the impact on individual health and the implications for workplace health management.	Emerald
Understanding the context of workplace health management as it relates to workplace bullying		Journals	2010	International Journal of Workplace Health Management		3	1 Studiendesign	The International Journal of Workplace Health Management (IJWHM) invites submissions for a special edition on "Understanding the context of workplace health management as it relates to workplace bullying". It is anticipated that the special edition will appear in July 2011. Workplace health is becoming a major public health issue for employers and all levels of government. Furthermore, workplace health is also gaining momentum at an individual organizational level. Well planned, comprehensive workplace health programs have been shown to be cost-effective, especially when the health promotion programs are targeted and matched to the health problems of the specific employee population. Furthermore, studies have repeatedly demonstrated that workplace health programs not only lower health care and insurance costs, but also decrease absenteeism, and improve performance and productivity. Similarly, workplace bullying is emerging as a factor impacting on the health of individuals both within and outside the workplace. That is, there are health consequences not only for those who have been bullied, but also those who have witnessed bullying, or for those who have to address the problem, such as counsellors, medical practitioners, lawyers and family members. The consequences of workplace bullying for the organization include increased absenteeism, decreased performance, lower productivity and decreased commitment to the organization. The effects on individuals include loss of self-confidence, self-esteem and respect, increased intention to leave, and effects on relationships with others. The goal of this special issue is to expand the boundaries of our understanding of workplace bullying as it pertains to workplace health management and to effective programs that will help to address the problem. To that end, we encourage authors to submit papers addressing: The impact of workplace bullying on individual health – to include primary prevention, behaviour modification, attitudes and lifestyle choice, health education, health promotion, and how to motivate people Workplace culture – to include management policies and procedures, communication systems, training and learning opportunities, and work-life balance, and the effect this has on morale and well-being Physical work issues – to include musculoskeletal health/ ergonomics Legislative and policy outcomes – to include the impact of health and safety legislation and occupational health; the effectiveness or otherwise of organizational policies; and the level of compliance within the organization The above list is meant to provide illustrations and is not exhaustive. Other proposals for relevant papers are encouraged by the Guest Editors. Both empirical and conceptual/theoretical papers will be considered, as will studies that are either quantitative or qualitative. Informal inquiries about the Special Issue can be made to Michael Sheehan, E-mail: msheehan@glam.ac.uk Manuscripts must be received by June 2010. Manuscripts, which should be clearly labelled as submissions intended for this Special Edition, should be submitted to Michael Sheehan and accord with regular IJWHM guidelines which can be viewed at: http://info.emeraldinsight.com/products/journals/author_guidelines.htm?id=ijwhm . All submissions will be anonymously peer reviewed, using the normal IJWHM review criteria while also taking into account the contribution of the paper to extending our understanding of workplace bullying as it pertains to workplace health management. Understanding the predictors of participation and the barriers to employee involvement in workplace health promotion programmes: a thesis presented in partial ...	J Edwards	Artikel	2012				Studienziel	The benefits of workplace health promotion programmes for organisations are well documented. However, the problem of low employee participation has continued to challenge managers, and is an area that has received relatively little attention in health promotion literature, particularly in New Zealand. The purpose of this investigation is to develop a better understanding of the variables predicting, and the barriers preventing, employee participation in health promotion activities. Thereby assisting managers to maximise participation rates and develop successful workplace health promotion initiatives. This research centred on identifying and assessing the predictors and barriers to employee participation in nine health promotion activities commonly offered in New Zealand organisations. The data collection process included an initial preliminary study, followed by a large online questionnaire completed by 883 New Zealand employees. These results led to developing an in–depth qualitative study, involving semi–structured face–to–face interviews with 20 employees, designed to triangulate and add further depth in understanding the factors that influence employee participation in health promotion programmes. Research results determined that the likelihood of an employee participating is best predicted by their age, gender, perceived stress, job satisfaction, supervisor support, organisational health climate, and degree of perceived job flexibility. Conversely, the barriers preventing participation included activities scheduled at inconvenient times, a lack of information about the activities, excessive work and family commitments, low job flexibility, low self–efficacy, feeling embarrassed, and a lack of trust in supervisors. Maintaining participation was achieved through continuously changing activities, and constant communication with participating staff. To maximise participation, the present investigation recommends that managers consider the organisation’s environment, by way of managerial support and cultivating a positive organisational health climate, schedule activities during normal working hours and provide time off for employees to take part, allow greater job flexibility, fully subsidise any financial costs, and ensure all employee health information is secure. When attrition is present, managers would benefit from focusing on motivational strategies, introduce rewards and incentives, and demonstrate their own high motivation, commitment and enthusiasm to the programme. Urlaubsmanagement - Die Rolle von Erholung im betrieblichen Gesundheitsmanagement	Charlotte Fritz, Sabine Sonntag	Literatur-nachweis	2004				Studienziel	Urlaub und Erholung werden aus vorwiegend arbeits- und organisationspsychologischer Perspektive als ein spezifischer Aspekt des betrieblichen Gesundheitsmanagements diskutiert. Zunaechst wird kurz beschrieben, was aus psychologischer Sicht unter Erholung zu verstehen ist und wie die Wirkungen von Erholung theoretisch erklart werden koennen. Dann wird auf die Wirkung von Erholung auf das Wohlbefinden und auf die Arbeitsleistung eingegangen. Anschliessend wird die Bedeutung von Dienstreisen und Sabbaticals besprochen, und es wird der Frage nachgegangen, wie die positiven Effekte eines Urlaubs moeglichst lange erhalten werden koennen. Abschliessend werden Handlungsmoeglichkeiten fuer das einzelne Individuum sowie fuer das Personalmanagement der Zukunft abgeleitet. Es wird deutlich gemacht, dass Planung und Organisation von Urlaub und von anderen laengeren Erholungszeitraeumen einer vermehrten Beachtung innerhalb des Personalmanagements beduerfen.	WISO
Using employee health management to contain rising medical costs	Michael F. Carter	Periodical	2008	Journal of Compensation & Benefits	24	1	Studienziel	The article discusses the use of Employee Health Management (EHM) or Diseases Management and Wellness programs to control rising medical costs in the U.S. The programs cover various health concerns such as diabetes, asthma, smoking cessation and an employee health plan (EAP). In a survey among employers, EHM programs also include on-site flu shots, health and consumerism communications. These programs can be implemented if it is in compliance with federal and state laws such as the Americans with Disabilities Act (ADA) and HIPAA.	EBSCO
using propensity score-based weighting in the evaluation of health management programme effectiveness	A Linden, JL Adams	Journals	2010	J Eval Clin Pract	16	1	Studienziel	When the randomized controlled trial is unfeasible, programme evaluators attempt to emulate the randomization process in observational studies by creating a control group that is essentially equivalent to the treatment group on known characteristics and trust that the remaining unknown characteristics are inconsequential and will not bias the results. In recent years, adjustment procedures based on the propensity score, such as matching and subclassification, have become increasingly popular. A new technique that has particular appeal for evaluating health management programmes uses the propensity score to create a weight based on the subject's inverse probability of receiving treatment. This weighting mechanism removes imbalances of pre-intervention characteristics between treated and non-treated individuals, and is then used within a regression framework to provide unbiased estimates of treatment effects. This paper presents a non-technical introduction of this technique by illustrating its implementation with data from a recent study estimating the impact of a motivational interviewing-based health coaching on patient activation measure scores in a chronically ill group of individuals. Because of its relative simplicity and tremendous utility, propensity-score weighting adjustment should be considered as an alternative procedure for use with observational data to evaluate health management programme effectiveness. Valuing empathy and emotional intelligence in health leadership: a study of empathy, leadership behaviour and outcome effectiveness	C. Skinner, P. Sprugeon	Journals	2005	Health Services Management Research	18	1	-	This article examines the relationship between health managers' self-assessed empathy, their leadership behaviours as rated by their staff, and staff's personal ratings on a range of work satisfaction and related outcome measures. Empathy was conceived of as four distinct but related individual dispositions, namely empathic concern (EC), perspective taking (PT), personal distress (PD) and empathic matching (EM). Results showed three empathy scales (EC, PT and EM) were, as postulated, positively related to transformational behaviour (inspiring followers to achieve more than expected). The same three measures, also as expected, showed no relationship to transactional behaviour (motivating followers to achieve expected results) and were negatively associated with laissez-faire leadership (an absence of leadership style). Relationships between empathy scales and outcome measures were selective and moderate in size. Strongest empathy association was evident between the PT scale and most outcome measures. Conversely, the extra effort outcome appeared most sensitive to the range of empathy scales. Where significant relationships did exist between empathy and outcome, leadership behaviour was in all cases a perfect mediator. Whilst not denying the smaller dispositional effects on leadership outcomes, leadership behaviour itself, rather than individual traits such as empathy, appear to be major influencing factors in leadership effectiveness. Virtuelle Unternehmen und Lifestyle-Management: neue Formen der Integration von Arbeit und Gesundheit	M Thomzik, S Güttel	Staatliches Dokument	2007				Studiendesign	Im Rahmen der Projektarbeit wurden, aufbauend auf Literaturund Dokumentenanalysen, virtualisierte Formen der Arbeit strukturiert, ein Lebensstilkonzept entwickelt, Aufgaben und Ansatzpunkte eines gesundheitsorientierten Lifestyle-Managements herausgearbeitet sowie potenzielle Gesundheitsrisiken, die mit virtualisierten Formen der Arbeit einhergehen, usammengestellt. Mithilfe von Fallstudien konnten die hieraus abgeleiteten Forschungshypothesen geprüft und erste Ergebnisse zu dem Zusammenhang von virtualisierten Formen der Arbeit, Lebensstil(en) und Gesundheit gewonnen werden. Darauf aufbauend wurde ein Fragebogen entwickelt, der online von 236 BeraterInnen vollständig beantwortet wurde. Ausgehend von den so gewonnenen theoretischen und empirischen Ergebnissen wurde ein Instrumentenrahmen Lifestyle-Management entwickelt und im Rahmen erneuter Fallstudien getestet.	Google Scholar
Vision and training strategy for health management specialist	HJ Kim	Journals	2006	J Prev Med Public Health	39	3	Studienziel	The identity crisis of preventive medicine appears to have been deepening. As a solution, it is insisted that preventive medicine should focus on clinical preventive medicine. However, in the field of heath policy and management, the better solution should be found in a serious search for visions and perspectives of its study on population and society. In this regard, the specialist who studies the field can be defined as a medical doctor majoring in public health. In this paper, I first forecasted major socioeconomic changes to occur in medical and public health arena and explored the role of those studying health policy and management. Secondly, I summarized their career paths and main activities in order to establish visions. Finally, I proposed curriculums on health policy and management for medical school undergraduates and for specialists majoring in preventive medicine, respectively.	PubMed
Von "Burnout" zu "Begeisterung" - di positive Wende der Arbeits- und Gesundheits-psychologie	Wilmar Schaufeli	Fachzeitschri ft	2005	Wirtschafts-psychologie aktuell			Studiendesign	Für die Arbeits- und Gesundheits-psychologie steht traditionell Stress und Krankmachendes im Fokus: Dem „armen Malocher“ – so könnte man stark zugespitzt formulieren – muss geholfen, die ganze Arbeitswelt soll humaner werden. Which bundles of features in a Web-based personally controlled health management system are associated with consumer help-seeking behaviors for physical and emotional well-being?	AY Lau, J Proudfoot, A Andrews, ST Liaw, A Arguel, E Coiera	Journals	2013	J Med Internet Res	15	5	Studien-teilnehmer	<p>Personally controlled health management systems (PCHMS), which include a personal health record (PHR), health management tools, and consumer resources, represent the next stage in consumer eHealth systems. It is still unclear, however, what features contribute to an engaging and efficacious PCHMS.</p> <p>OBJECTIVE:</p> <p>To identify features in a Web-based PCHMS that are associated with consumer utilization of primary care and counselling services, and help-seeking rates for physical and emotional well-being concerns.</p> <p>METHODS:</p> <p>A one-group pre/posttest online prospective study was conducted on a university campus to measure use of a PCHMS for physical and emotional well-being needs during a university academic semester (July to November 2011). The PCHMS integrated an untethered personal health record (PHR) with well-being journeys, social forums, polls, diaries, and online messaging links with a health service provider, where journeys provide information for consumer participants to engage with clinicians and health services in an actionable way. 1985 students and staff aged 18 and above with access to the Internet were recruited online. Logistic regression, the Pearson product-moment correlation coefficient, and chi-square analyses were used to associate participants' help-seeking behaviors and health service utilization with PCHMS usage among the 709 participants eligible for analysis.</p> <p>RESULTS:</p> <p>A dose-response association was detected between the number of times a user logged into the PCHMS and the number of visits to a health care professional ($P=.01$), to the university counselling service ($P=.03$), and help-seeking rates (formal or informal) for emotional well-being matters ($P=.03$). No significant association was detected between participant pre-study characteristics or well-being ratings at different PCHMS login frequencies. Health service utilization was strongly correlated with use of a bundle of features including: online appointment booking (primary care: OR 1.74, 95% CI 1.01-3.00; counselling: OR 6.04, 95% CI 2.30-15.85), personal health record (health care professional: OR 2.82, 95% CI 1.63-4.89), the poll (health care professional: OR 1.47, 95% CI 1.02-2.12), and diary (counselling: OR 4.92, 95% CI 1.40-17.35). Help-seeking for physical well-being matters was only correlated with use of the personal health record (OR 1.73, 95% CI 1.18-2.53). Help-seeking for emotional well-being concerns (including visits to the university counselling service) was correlated with a bundle comprising the poll (formal or informal help-seeking: OR 1.03, 95% CI 1.00-1.05), diary (counselling: OR 4.92, 95% CI 1.40-17.35), and online appointment booking (counselling: OR 6.04, 95% CI 2.30-15.85).</p> <p>CONCLUSIONS:</p> <p>Frequent usage of a PCHMS was significantly associated with increased consumer health service utilization and help-seeking rates for emotional health matters in a university sample. Different bundles of PCHMS features were associated with physical and emotional well-being matters. PCHMS appears to be a promising mechanism to engage consumers in help-seeking or health service utilization for physical and emotional well-being matters.</p>	PubMed
Whole Health Management, Manatee County Form Wellness Center		Periodical	2007	Employee Benefit Plan Review	61	11	Studienziel	<p>The article reports on the collaboration of Whole Health Management and Manatee Inc. to establish a wellness center at 60 sites throughout Manatee County, Florida. Whole Sale Health, provider of on-site clinics, will be entrusted with running the center, and the center will treat dependents and retirees who are younger than age 65. Moreover, a professional medical staff will provide comprehensive services with a special focus on preventive medicine and overall wellness.</p>	EBSCO
Wie Leistung und Gesundheit strategisch zusammengeführt werden können - Ursache-Wirkungsbeziehungen ...	Burkhard Schmidt, Michael Kastner	Literatur-nachweis	2011	IN: Michael Kastner, Rolf Otte			-	<p>Ein ganzheitliches, integratives, nachhaltiges und systemverträgliches Konzept zum Leistungs- und Gesundheitsmanagement (LGM) und eine Studie zu seiner Evaluation werden vorgestellt. Zunaechst wird der theoretische Hintergrund des LGM erheilt, wobei sowohl Ueberlegungen zum Gesundheitsbegriff als auch zur Umsetzung von Gesundheitsmanagement in Unternehmen angestellt werden. Ausserdem werden Bausteine und Rahmenkonzept des LGM skizziert sowie Moeglichkeiten und Schwierigkeiten der Evaluation eroertet. Fuer die Studie wurden bei einem deutschen Automobilhersteller 428 Werksarbeitern Fragebogen zu Leistung bzw. Leistungseinschraenkungen, Zufriedenheit mit Fuehrungskraft und Kollegen, Arbeitsbedingungen, persoenlicher Gesundheit und Zufriedenheit mit der betrieblichen Gesundheitsfoerderung vorgelegt. Ueber eine Faktorenanalyse wurden Dimensionen wie gesundheitsbezogenes Fuehrungsverhalten, Anerkennung, Handlungsspielraum, soziale Unterstuetzung, Identifikation mit dem Unternehmen, Coping, Veraenderungsbereitschaft, Angst um den Arbeitsplatz, situative und taetigkeitsbezogene Belastung, persoenliche Leistungseinschraenkung, gesundheitliche Beschwerden und Erreichen von Qualitäts- und Quantitätszielen extrahiert. Diese wurden in Strukturgleichungsmodelle ueberfuehrt. Zudem wurden ueber multivariate Varianzanalysen Unterschiede in verschiedenen Altersgruppen hinsichtlich dieser Faktoren ermittelt. Aus den ermittelten Ergebnissen wurden strategische Massnahmen fuer das LGM abgeleitet.</p>	WISO
Wokers' involment -- a missing component in the implementation of occupational safety and health management systems in enterprises	D Podgórski	Journals	2005	Int J Occup Saf Ergon	11	3	Studienziel	<p>Effective implementation of occupational safety and health (OSH) legislation based on European Union directives requires promotion of OSH management systems (OSH MS). To this end, voluntary Polish standards (PN-N-18000) have been adopted, setting forth OSH MS specifications and guidelines. However, the number of enterprises implementing OSH MS has increased slowly, falling short of expectations, which call for a new national policy on OSH MS promotion. To develop a national policy in this area, a survey was conducted in 40 enterprises with OSH MS in place. The survey was aimed at identifying motivational factors underlying OSH MS implementation decisions. Specifically, workers' and their representatives' involvement in OSH MS implementation was investigated. The results showed that the level of workers' involvement was relatively low, which may result in a low effectiveness of those systems. The same result also applies to the involvement of workers' representatives and that of trade unions.</p>	PubMed

Women's health research and health leadership: benchmarks or the continuum	VW Pinn	Journals	2006	Journal of dental education	70	11	Studienziel	<p>Bringing the appropriate attention to research on women's health is a process that has evolved in tandem with our understanding and acceptance during the past four decades of women as individuals with rights and roles in society equal to as well as different from those of men. Thanks to the leadership of many, recent progress has been made in women's health research. That evolution during the past fifteen years can be characterized by the following concepts:</p> <ul style="list-style-type: none"> - expanded concepts of women's health, - policies for and research on sex-gender comparisons, - addressing health disparities among various populations, - setting research priorities and approaches, and - advancing women's roles in health research, health policy, and health careers. <p>Each of these benchmarks has influenced the others, but taken individually, they can provide a framework for describing areas of progress.</p>	Google Scholar
Work & Stress comes of age: Twenty years of occupational health psychology	Tom Cox, Mary Tisserand	Journals	2006	Work & Stress	20	1	Studiendesign	<p>The article discusses the journal's history, current situation, and future visions. It started way back 1986, had its first issue published in January 1987, and recently celebrated its 20 years of existence. It dealt with occupational health psychology and often discussed issues related to work stress. Recently, it is more concerned with occupational health and safety. It aims to be one of the highest standard journal publishing interesting issues related to occupational health psychology.</p>	EBSCO

Work engagement: An emerging concept in occupational health psychology	Arnold B. Bakker, Wilmar B. Schaufeli, Michael P. Leiter, Toon W. Taris	Journals	2008	Work & Stress	22	3	Studienziel	<p>This position paper introduces the emerging concept of work engagement: a positive, fulfilling, affective-motivational state of work-related well-being that is characterized by vigour, dedication, and absorption. Although there are different views of work engagement, most scholars agree that engaged employees have high levels of energy and identify strongly with their work. The most often used instrument to measure engagement is the Utrecht Work Engagement Scale, a self-report instrument that has been validated in many countries across the world. Research on engagement has investigated how engagement differs from related concepts (e.g., workaholism, organizational commitment), and has focused on the most important predictors of work engagement. These studies have revealed that engagement is a unique concept that is best predicted by job resources (e.g., autonomy, supervisory coaching, performance feedback) and personal resources (e.g., optimism, self-efficacy, self-esteem). Moreover, the first studies have shown that work engagement is predictive of job performance and client satisfaction. The paper closes with an account of what we do not know about work engagement, and offers a brief research agenda for future work.</p>	EBSCO

Work Impacts on Health: Their Implications and Management Techniques	AE Nwachukwu	Artikel	2012	Journal of Education and Practice			Studienziel	<p>Adverse conditions in workplaces that impact negatively on the health of workers are legion. They include Biological, Chemical, Electrical and Mechanical Hazards; as well as Physical Hazards like noise; particulate emissions; thermal stress; poor illumination; pressure and vibration, among others. These have a couple of fundamental implications. Several exposed workers suffer accidental injuries, occupational diseases, deformity or death. Management suffers lost-work-time occasioned by absence of incapacitated workers; as well as avoidable financial losses through medical expenses, occasional litigations instituted by families of industrial accident victims, and through the payment of required compensations. Further implications are that the above conditions make it mandatory that management must protect their employees from the consequences of these Occupational Health Hazards (OHH) by running a comprehensive Occupational Health Services (OHS) programme in their establishments. The degree of effectiveness of such services rests principally on the flawless adherence of both employers and employees to all industrial legislations that deal with the protection of the health, safety and welfare of workers.</p>	Google Scholar
Work Stress and Occupational Health Psychology	CL Cooper, P Dewe	Artikel	2008	Work Stress and Occupational Psychology			Studiendesign	<p>In their seminal article on job stress and employee health, Beehr and Newman (1978) commented that as most people spend around half their waking lives at work, then it is more than likely that work factors will have an important influence on their wellbeing.</p>	Google Scholar
Workers' Involvement in Health and Safety Management and Beyond: The UK Case	Victoria Howes	Journals	2007	International Journal of Comparative Labour Law & Industrial Relations	23	2	Studienziel	<p>The article presents a paper that analyzed the approaches to worker involvement adopted by the European Union and Great Britain, providing some examples from other Member States. It also presents perspectives of this issue by employers, employees and regulators. Employee involvement is essential in establishing effective health and safety management such as the development of a positive health and safety culture, building trust between employees and management, reducing the number of accidents and work-related illnesses and improving business efficiency.</p>	EBSCO
Working with Health Information Management for Revenue Cycle Improvement		Periodical	2008	Healthcare Financial Management	62	6	Studiendesign	<p>Information about several topics related to health information management (HIM) discussed at a roundtable sponsored by 3M Health Information Systems is presented. Kerry Gillespie, the chief financial officer (CFO) of Ardent Health Services mentioned that a key indicator they look for in HIM is days in discharged not final billed (DNFB). According to Mark Weber, the content development manager at 3M, the areas overlooked at revenue cycle improvement is the time to take out a Medicare claim.</p>	EBSCO
Workplace health management and noise-induces hearing loss in Saitama Prefecture: problems and corrective action	Y Takeishi	Journals	2009	Nihon Jibiinkoka Gakkai kaibo	112	6	Studienziel	<p>Noise-induced hearing loss due to long-term work in extremely noisy places cannot currently be treated effectively, making it especially important to prevent such loss through occupational health management. We studied problems identified in a survey on occupational health management implementation given in Guidelines for Preventing Noise-Induced Disorders, together with possible corrective measures. Questionnaires mailed in 2005 to 1000 Saitama Prefecture business sites were returned by 346 (response: 34.6%). We analyzed 140 noise-producing business operations. We found that (1) among sites having operating hazards, noise-inducing operations occurred most often in the manufacturing industry; (2) the companies analyzed lagged furthest behind in managing auditory occupational health; and (3) the smaller the site, the less occupational health management was implemented. Organizations such as occupational health centers and labor bureaus must work together to implement auditory management at medium and small sites. It is also important to support auditory management through the aid of specialists in noise-induced hearing loss authorized by the Oto-Rhino-Laryngological Society of Japan.</p>	PubMed

"Bitte gesund schrumpfen" / Management und Gesundheit in Krisenzeiten	Kai Seiler	Literatur-nachweis	2008	Die Ersatzkasse	88	12	Studienziel	Von der aktuellen Finanzkrise sind nicht nur Bankkonten und Depots betroffen, die Sorgen bei deren Besitzern verursachen. Es sind auch nicht vorrangig die neuen, sich öffentlichkeitswirksam zur Schau stellenden arbeitslosen Investmentbanker. Vielmehr sind es die zahlreichen Beschäftigten in jenen Unternehmen, die von den wirtschaftlichen Folgen und Abhängigkeiten der Situation besonders betroffen sind. Fortwährend ist in den Medien von Gewinnwarnungen zu hören und als sofortige Maßnahme der Kostenreduzierung wird befristetes und in Leiharbeit tätiges Personal entlassen. Zulieferfirmen der Automobilindustrie stellen auf Kurzarbeit um, da die Autoproduktion fast überall gedrosselt wurde. Wir Kunden sind gegenwärtig nicht mehr so konsumfreudig und halten geplante Anschaffungen zurück – was wiederum die Wirtschaftsprozesse negativ beeinflusst. Dieser Effekt ist psychologisch verständlich – genauso wie die Angst und Unsicherheit, die eben jene Beschäftigten der von der Finanzkrise gebeutelten Wirtschaftszweige in den Arbeitstag mitbringen. Und diese Angst vor Existenznot und persönlichen Veränderungen wird von mancher Führungskraft aber auch von manchem Politiker gefördert. Nicht unbedingt aus böser Absicht, sondern weil sie teils auch selbst in Panik geraten. Druck bekommen und durch ihr Verhalten sowie durch ihre „Lösungsversuche“ die Situation für alle Beteiligten verschärfen. Den meisten Führungskräften ist dabei oftmals gar nicht bewusst, dass dadurch die Gesundheit vieler Mitarbeiter wesentlich verletzlicher wird. So ist unmittelbar in Krisenzeiten das Immunsystem häufig anfällig für Infekte; mittel- bis längerfristig stehen eher vegetative und psychosomatische Beeinträchtigungen im Vordergrund.		WISO
Achieving Organizational Effectiveness through Health Management and Ergonomics	Munirathinam T. Naidu, G. Ramesh	Journals	2011	Advances in Management	4	4	Studienziel	The ability of companies to compete successfully in today's competitive environment is increasingly a function of how well they use the efficiency of employees. Over the years, employers have upgraded the ways of performing the jobs and implemented more efficient organizational structures. There are several reasons why arranging health management programmes and adopting ergonomic changes are considered important tasks. They have important implications for the abilities of organizations to achieve competitive advantage. Successful ergonomic system takes a long time to establish and maintain but companies possessing it, can have long term benefits. Managements fail to understand the effect of ergonomics on the performance and effectiveness of companies. Managers are often unaware of results of health management until something happens. The consequence of poor ergonomic system or lack of attention on the part of management is the decline of performance of employees. Talented employees even leave the work place to take position in strong and growing companies with better facilities. Success of an enterprise depends on its workforce. Hence, ensuring physical, mental and emotional well being of employees is an inevitable task for employers. Good ergonomics in the workplace results in less absenteeism and minimum turnover due to health issues. It can keep employees healthier, happier and energetic. Proper concern of management towards high performing individuals keeps them happy. Realizing this, many organizations are hiring health professionals to handle occupational diseases. Undeniably incorporating good ergonomic system and effective health management practices will benefit the entire work force in one go and will increase its commitment towards the organization.		EBSCO

Approach for measuring health-related quality management	Yvonne Lagrosen, Ingela Bäckström, Håkan Wiklund	Journals	2012	The TQM Journal	24	1	-	In the research study we found that two of the three dimensions that show correlation with the perception of employee health are elaborated from the value "leadership commitment." This once again emphasizes the importance of managers' commitment to promoting good health among the employees. Earlier research has pointed out top management commitment as an assumption to succeed with quality management and that "leadership commitment" is the most important value within quality management for the employees' own perception of their health (Lagrosen, 2004; Lagrosen et al., 2007). Wreder (2008) also found in her investigation that the value "management commitment" was a supported value and conditional for the values "co-worker involvement," "focus on customer" and "continuously development" when working with employee health. According to the results in this study, leadership commitment requires a leadership that is characterized by the dimensions "presence and communication" and "integrity" to promote health among employees'. This is in line with Harnesk et al. (2005) who found that leaders who have established sustainable health among their employees are paying attention to the importance of communication in dialogue. Moreover they have endeavored to establish trust in all directions. Wreder (2008) also found information sharing to be an important aspect for managers to create good psychosocial working conditions. In addition, Keith et al. (2002) have found that two of the top ten most important factors contributing to staff workplace health were "management communicate openly with staff" and "ability to approach supervisor." In our study the dimension "integrity" was related to good health with the meaning of being a good role model, keeping promises and being fair. This is in accordance with earlier research which confirms that honesty and trustworthiness are important within management and for employee commitment (see for instance Dubrin, 2004). Honesty and integrity were also identified as positive factors by Keith et al. (2002) to contribute to staff workplace health. For overall productivity, performance and setting good examples for others, the leaders need to be healthy themselves (Longenecker et al., 2009). In addition, the significance of the dimension "influence" in this study indicates that managers have to hand over responsibility and authority to employees. This is in line with earlier findings of how the possibility to influence their own work promotes employees' health (Ahlberg et al., 2008; Karasek and Theorell, 1990; Murphy and Cooper, 2000). Since Engcon Nordic AB is an attractive workplace with low sickness absence it is also interesting to note that the three dimensions that correlated significantly with the health index also had the highest mean score and lowest standard deviation. Leadership at the company is to a high extent characterized by a clear, visible and distinct way of communication. Dahlgard et al. (1998) stress that clear leadership is one of the two most critical success factors of quality management. The employees at Engcon Nordic AB also feel, to a considerable extent, that they can influence their working situation, an importance which is often emphasized in quality management (Dale, 2003; Deming, 1986; Oakland, 2001). In contrast to traditional ways of measuring heahealth, this approach is connected to quality management and explores those practices, which are important to consider for 67 Health-related quality management employee health. This approach is easy to use, when analyzing and evaluating the results in order to get a holistic picture, an importance which is emphasized in for instance Zwetsloot et al. (2010). The Cronbach a values for our dimensions range from 0.64 to 0.84 and, thus, they fit the recommendation to be over 0.60. Consequently, we conclude that the measures presented in this paper are statistically reliable.		Emerald
Associations between supportive leadership and employees self-rated health in occupational sample	B Schmidt, A Loerbroks, RM Herr, MG Wilson, MN Jarzock, D Litaker, D Mauss, JA Bosch, JE Fischer	Journals	2013	Int J Behav Med			-	Supportive leadership behavior appears to be an important determinant of health in the workforce. The influence of leaders on work climate and organizational culture is substantial [11], making leaders as potentially important upstream determinants of unhealthy levels of stress in the workplace. If future work can further clarify the dimensions of "healthy leadership" and confirm associations with health, new opportunities for health promotion in the workplace may arise, leading to enhanced employee health and productivity. Communication, social capital and workplace health management as determinants of the innovative climate in German banks	T Köhler, C Janssen, SC Plath, JP Reese, J Lay, S Steinhausen, T Gloede, C Kowalski, F Schulz-Nieswandt, H Pfaff	Journals	2010	Int J Public Health	55	6	-	Despite the above-mentioned methodological limitations, the present study still provides us with important information about the innovative climate in the banking industry. Innovations or a positive innovative climate are vital for a company's economic success. By examining worksite health management and other soft factors such as social capital and communication climate as determinants of innovative climate, corporate focus is shifted to the health and well-being of employees. Only if companies become aware of the economic potential of health promotion—collected on a scientifically sound basis—they will begin to actively incorporate it into their corporate policy (Köhler et al. 2009). Bank executives should focus more on improving the social processes in their organizations by having a positive influence on internal communication and social capital. In addition, the finding that the promotion of employee health through the implementation of a well-functioning WHM program also has a positive influence on the innovative climate in the banks is an important indicator not only for science, but especially for corporate management. By designing and implementing a WHM program, corporate management can improve the innovative climate in their particular company. In this way, the link between management decision-making and innovation not only benefits corporate management, but also employees and employee health. Despite the above-mentioned methodological limitations, the present study still provides us with important information about the innovative climate in the banking industry. Führung und Gesundheit	Echterhoff	Disseration	2011 Uni Bielefeld			-	Obwohl hier bei den Sichtweisen der Führungskräfte – bezogen auf die Ausrichtung Beschäftigtengesundheit – durchaus sehr positive Ansätze zu erkennen sind, kommt es in letzter Konsequenz nur in den Unternehmen zu einem aktiven Handeln, in denen die Unternehmenskultur geprägt ist von familiären und gemeinschaftlichen Sichtweisen. Insbesondere in den Betrieben, in denen Betriebliche Gesundheitsförderung schon länger umgesetzt wird, kann man solche positiven Entwicklungen verzeichnen. Die in den Interviews immer wieder vorzufindenden Widersprüche sind durchaus nachvollziehbar und haben wahrscheinlich sehr viel mit den gesellschaftlichen Sichtweisen im Hinblick auf die Themen Gesundheit und Krankheit zu tun. Eine Hypothese, die sich aus diesen Erkenntnissen ergibt, ist, dass sich Führungskräfte im Rahmen der Unternehmenserwartungen verhalten. Sie sehen sich verantwortlich für das Betriebsklima und die Motivation der Beschäftigten, übernehmen aber nicht die Verantwortung für die Gesundheit der Mitarbeiterinnen und Mitarbeiter. Letzteres wird nicht explizit von den Unternehmensführungen erwartet. Sollte sich diese Hypothese im Rahmen weiterer Untersuchungen bestätigen, wird erneut deutlich, dass Betriebliche Gesundheitsförderung nur „Top down“ – durch die Überzeugung der Unternehmensverantwortlichen – gelingen kann. Positiv zu bewerten ist es, dass dort, wo Gesundheitsförderung verankert werden konnte, sich auch die Sichtweisen der Befragten verändert hatten. Sie gingen insgesamt aktiver mit den Themen der Gesundheitsförderung um, und auch die Ausrichtung und das Verständnis von Gesundheitsförderung konnte hier wesentlich verbessert werden. Die hier befragten Führungskräfte beschrieben ihre eigenen Ansätze zur Gesundheitsförderung im Bereich der Präimprävention, und sie hoben dabei vor allem auf das persönliche Gesundheitsverhalten ab, das sie hauptsächlich in die Freizeit verlegten. Der Betrieb als „Ort der Gesundheit“ ist ihnen nicht präsent. Nur wenige sahen auch dort das Potential für die Förderung der eigenen Gesundheit. Dazu kommt, dass die Verantwortung für Gesundheit grundsätzlich individualisiert wird. Die Führungskräfte reagierten bei den Fragen nach der Verantwortung für die Gesundheit der Beschäftigten im Betrieb häufig mit der Zuordnung der Verantwortung zu anderen Instanzen und sehr häufig mit der Zuordnung zu den Beschäftigten selbst. In letzter Konsequenz ist also jeder für sich selbst verantwortlich. Um Betriebliche Gesundheitsförderung erfolgreich implementieren zu können, bedarf es eines Umdenkens der Führungskräfte bezogen auf diese Aspekte. Hier muss angesetzt werden, um Betriebliche Gesundheitsförderung erfolgreich und dauerhaft in einem Unternehmen einführen zu können. Möglich wird das u.a. durch Führungskräfte-seminare, die diese Themen bearbeiten, also Seminare, die sich konkret mit dem Einfluss der Führungskräfte auf die Gesundheit der Beschäftigten befassen und deutlich machen, in welchem Maße dieser Einfluss gegeben ist. Einige der hier befragten Vorgesetzten hatten an entsprechenden Seminaren teilgenommen. In ihrem Antwortverhalten wurde deutlich, dass sie bei den zuvor beschriebenen Aspekten auch eine andere Sichtweise entwickelt hatten als Führungskräfte, die bisher nicht an solchen Seminaren teilgenommen hatten. Insgesamt wird durch diese Untersuchung deutlich, dass die betriebliche Gesundheitsförderung noch einen langen Weg vor sich hat, um in den Unternehmen etabliert und als Selbstverständlichkeit im Bereich der Führung anerkannt zu werden. Einige Hinweise, welche Voraussetzungen notwendig sind, damit dieses Vorhaben gelingen kann, konnten hier gewonnen und bestätigt werden. So manche Hypothese, die hier abgeleitet werden konnte, ist es wert, überprüft zu werden.	Google Scholar

In der vorliegenden Untersuchung wurden 685 Mitarbeiterinnen und 637 Mitarbeiter anhand der neu entwickelten Gesundheits- und Entwicklungsförderlichen FührungsverhaltensAnalyse (GEFA) zum Verhalten ihres/ direkten Vorgesetzten befragt. Zudem wurden sowohl positive als auch negative Befindensindikatoren der Mitarbeiterinnen und Mitarbeiter erhoben. Das Führungsverhalten weist substanzielle signifikante Zusammenhänge mit sämtlichen Befindensindikatoren auf. Das dem Instrument zugrunde liegende Modell gesundheits- und entwicklungsförderlicher Führung – bestehend aus den Dimensionen: Überfordernde Führung, Entwicklungsorientierte Führung und Unterstützungsorientierte Führung – konnte bestätigt werden. Differenzierte Analysen nach Geschlecht der Führungskraft und Geschlecht der Mitarbeiter weisen auf Unterschiede im Führungsverhalten hin, die sich im Befinden der Mitarbeiterinnen und Mitarbeiter widerspiegeln. Health effects on leaders and co-workers of an art-based leadership development program	J Romanowska, G Larsson, M Erisson, BM Wikström, H Westerlung, T Theorell	Journals	2011 Psychother Psychosom	80	2	Studienziel	The present study represents a new cross-disciplinary approach. It should be seen as a pilot study in the field. It suffers from attrition problems. Positive findings for both standardised questionnaires and biological parameters strengthened the results. Compared with an established manager education, the art-based approach was more beneficial to leaders' and employees' mental and biological stress, at least when the two programs are administered as in the present study. The study provides a rationale for further evaluation of the effectiveness of this alternative educational approach.	PubMed
Health management as part of leadership in public administration (deutsch: Gesundheitsmanagement als Führungsaufgabe in der öffentlichen Verwaltung)	AK Matyssek	Journals	2012 Bundesgesundheitsblatt Gesundheitsforschung Gesundheits-schutz	55	2	Studienziel	Gesundheitsgerechte Mitarbeitendenführung ist lernbar. Neben der Bereitschaft der Führungskräfte, ihr Führungsverhalten zu überdenken, sind hierbei auch die Behördenleitungen gefordert, insbesondere hinsichtlich der Bereitstellung von Ressourcen wie Zeit und Personal. Andernfalls besteht die Gefahr, dass Veranstaltungen zum „Gesund Führen“ als „Pflaster“ verstanden werden, während die Ursachen der Krankheit (Überforderung durch Ressourcenknappheit) fortbestehen und unangetastet bleiben. Um Führungskräfte aus der öffentlichen Verwaltung für das Thema zu gewinnen – unabhängig von ihrer Hierarchiestufe – ist es sinnvoll, bei ihrem Umgang mit der eigenen Gesundheit anzusetzen und über diesen Umweg, die Bereitschaft zur gesundheitsgerechten Mitarbeitendenführung zu schaffen. Das Ziel ist dabei im Interesse aller, die in der öffentlichen Verwaltung tätig sind, nämlich die Förderung und der Erhalt der Arbeitsfähigkeit und Leistungsbereitschaft bei psychischer und physischer Gesundheit.	PubMed
Health promoting leadership - Different views of the concept	Robin I. Stadnyk, Andrea Eriksson, Runo Axelsson, Susanna Bihari Axelsson	Journals	2011 Work	40	1	Studienziel	Health-promoting leadership can be defined as leadership that is concerned with creating a culture for health-promoting workplaces and values to inspire and motivate the employees to participate in such a development. Health-promoting leadership can also be seen as a critical part of the organisational capacity for health promotion, including the knowledge and skills of the managers and the policies and structures of the organisation supporting a health-promoting workplace. In other words, this means including leadership engagement in the systematic development of both the physical and psychosocial work environment. It is important to consider specific and contextual leadership conditions when formulating strategies for health-promoting leadership. Managers within the public sector often face limited resources and require different kinds of support to deal with their leadership tasks, including support from a higher organisational level for a health-promoting culture as well as organisational structures and policies that support the development of a health promoting workplace. A participatory approach is also essential, so that the concerns of frontline managers are also included when formulating strategies and interventions for health-promoting leadership. A relevant strategy for developing health-promoting leadership would involve combining organisational development with the development of individual managers. For example, managers who meet in smaller groups and produce action plans on workplace health promotion can provide a relevant method for building the capacity of both the individual managers and the organisation. To initiate a health-promoting development work, it can be recommended to get external help from experts with knowledge of workplace health promotion. Furthermore, the success of such development work depends on the integration of health promotion in ordinary organisational development and organisational culture. In this context, it can be recommended to take advantage of already established organisational structures as well as to promote collaboration between different organisational functions. Future research should develop measures for the evaluation of health-promoting leadership, including both intermediate and long-term outcomes. Such research should include the competence, structures, policies, and resources of the organisation as well as different aspects of the well-being of the employees in these measures.	EBSCO

Leadership for Quality, Effectiveness and Health	J Larsson	Artikel	2010	-			-	<p>The purpose of the present thesis is "...to contribute to the knowledge of how leadership relates to quality methodologies, effectiveness and health, and how leadership tools can be designed for promoting health in organisations". The general conclusion in this thesis is that leadership which seeks to integrate leadership values, behaviours and tools contributes positively to quality methodologies, effectiveness and subordinate health. The illustration in Figure 6.1 pictures the model which combines all these elements. Both situational and universal factors are important when determining how leadership should be practiced. Of potential interest to managers is the recognition in the model that they can contribute to their subordinates' health. The control charts that this model uses are an essential tool for managers because of the timely information they have to offer – managers know when to act. These developed control charts can support the health control in the PDSA model by giving more complete fact-based knowledge about subordinate health.</p>	Google Scholar
Leadership from a positive health perspective	M Macik-Frey, JC Quick, P Shinoda ...	Artikel	2009 Stress and the ...	doppelt			-	<p>The positive approach to the study of human functioning in medicine, sociology, psychology, and the organizational sciences is beginning to take a foothold but is still very much in its infancy. The theoretical arguments for this line of research are compelling as they suggest that a more efficient and effective way to move toward optimal human functioning may very likely be through the study of the positive or above average side of the curve that represents human functional possibilities. For many years the study of the negative deviations form the norm have dominated our research leading us the accept the end product as absence of the negative rather than presence of the positive. This dramatic positive shift in thinking requires very new ways of viewing behavior, emotion and cognition. It is not always possible to understand the positive form the predominant disease or dysfunction-based models. Thus, there are critics of the positive agenda that suggest it is simply a semantic difference that does not add substantively or significantly to our understanding of human functioning. The purpose of our study was to look at leadership through this positive lens. Specifically, we chose positive health as defined by Ruff and Singer (1998) as a framework for analyzing the conceptualization of leadership from the perspective of executive leaders in the field. Since the study of positive health, thriving and vitality is relatively recent, a qualitative method provides rich detail of how "leadership" as a construct is conceptualized by established leaders. Using this language rich data, we analyzed the frequency and meanings of interview dialogue that supported the positive health model. The core elements of positive health, a life of purpose, quality connection to others, self mastery and self regard and creating deeper meaning and purpose from adversity, were used as the framework. The results of this qualitative interpretation show a strong emphasis by leaders in the field of those four elements. We suggest that a significant factor in leadership is positive health of the leader and more significantly the facilitation of positive health in followers. The qualitative interview format provides rich, descriptive data that characterizes how functioning leaders view the meaning of leadership. It is interesting to note that in our interviews the predominant language was about promoting purpose, supporting followers, building healthy relationships and striving for excellence. This is very aligned with the human developmental perspective reflected in attachment theory and the exploratory drive. That is, mastery and achievement are as central to healthy human development as are secure, supportive relationships and attachments. Very little in comparison within the transcripts discussed how to overcome dysfunction or a desire to eliminate the negative. Leadership, in particular transformational leadership, promotes the performance of individuals, teams and organizations to achieve at levels that they might not otherwise achieved, the very definition of positive deviance. Our study provided qualitative evidence to support that within this group of high level leaders, the meaning of leadership parallels the facilitation of positive health.</p>	Google Scholar

Leadership, organization and health at work: a case study of a Swedish industrial company	A Eriksson, B Jansson, BJ Haglund, R Axelsson	Journals	2008 Health Promot Int.	23	2	-	-	<p>This case study has described the leadership and organization, including the organizational culture, of a Swedish company in relation to the health of the employees. The founder of this company has developed and actively promoted an organizational culture, which is based on assumptions that all individuals want to do something meaningful and take responsibility for their work. With this culture, the organization has developed a decentralized structure consisting of self-managed teams where the employees have a high degree of control over their work situation. According to the employees, there are extensive possibilities for personal development and responsibility, as well as good companionship, which make them feel well at work. This is also supported by the low sickness rate of the company.</p>	PubMed
Leadership, Quality and Health: Using McGregor's X and Y Theory for Analyzing Values in Relation to Methodologies and Outcomes	Johan Larsson, Stig Vinberg, Hakan Wiklund	Journals	2007 Total Quality Management & Business Excellence	18	10	-	-	<p>Study results strongly suggest that leaders who favored the X hypotheses had lower results concerning employee views of leadership and quality outcomes and, to some extent, had lower rankings for favorable health outcomes. The explanatory analyses concerning leadership and health are complex with many influencing factors. The author's assessment is that leadership values are one of the most important explanatory factors with respect to workplace health and quality work and should therefore be researched further. A pattern concerning leadership values and methodologies in successful organizations, which can be noted, was that the findings concerning C1 support earlier research at a successful organization (Larsson, 2004).</p>	EBSCO
Management for sustainable health: A TQM-inspired model based experiences taken from successful Swedish organization	Asa Wreder, Maria Gustavsson, Bengt Klefsjö	Journals	2008 International Journal of Quality & Reliability Management	25	6		Studienziel	<p>This paper synthesizes the empirical material from three case studies, performed by different research teams, in four organizations that have been awarded for excellence in management and health. Although, the organizations considered differ in several ways, the studies were performed with similar methods and show coinciding results about the methodologies and the importance of management commitment to create a health-promoting work environment. The results indicate that larger organizations do not require any specific methodologies to overcome management problems of today's working life to promote health. However, the main conclusion is that to create sustainable health, managers may need to consider a wider long-term management approach. Therefore, not only the identified methodologies but primarily the suggested model, which is a broader management strategy for promoting sustainable health, should be worth considering for managers, in both larger and smaller organizations. Based on the empirical material it is argued that the strategy for health promotion actually may follow the view of Hellsten and Klefsjö (2000) on how to work with total quality management. The explanation for this is that a culture of core values with concern for human aspects that are tenaciously supported by methodologies and tools, could be of benefit to support such work and organizational factors that help to form a Management for sustainable health.</p>	Emerald

Non-listening and self centered leadership -- relationships to socioeconomic conditions and employee mental health	T Theorell, A Nyberg, C Leineweber, LL Magnusson Hanson, G Oxenstierna, H Westerlund	Journals	2012 PLoS One	7	9	-	Our findings illustrate the importance of socio-economic factors to perceived management in the work place in Sweden during the later part of the 2000:s. The mechanisms behind the weak but consistent and significant relationship between low education level and "non-listening" leadership are unknown. Explanations may be related either to established communication patterns that are different in different socio-economic groups or to perceived differences in power sharing. Interpretations of the directions of the relationships should always be made with due caution in epidemiological studies. Accordingly our data cannot disentangle to what extent the relationships between leadership and employee health that we have observed are mediated by the leader's influence on work environment factors or whether both the leader and the work environment are influenced by common organizational factors that are beneficial to the health of the employees. Operationalizing Management Citizenship Behavior and Testing 1st Impact on Employee Commitment, Satisfaction, and Mental Health	Beth A. Rubin, Charles J. Brody	Journals	2011 Work & Occupations	38	4	Studienziel	Our results point to the need for further research and refinement of our measures. Our intent is to collect additional data. Of particular concern is that the survey items we use in some cases did not clearly identify managers as the enactors of the behavior, instead referring only to "my place of work." In these instances we suspect the vagueness in the question weakens the validity of our measures. In addition, the range of ethical behaviors tapped by these items is fairly limited compared to, for instance, the family-friendly behaviors. Furthermore, the positive wording of all of the management citizenship items may contribute to response bias. Finally, though here we conducted exploratory factor analyses that tended to support the existence of two related components of MCB, new data will permit a more stringent, confirmatory consideration of these measurement issues. Despite these measurement concerns, our research thus contributes to a small but growing body of scholarship pointing to the importance of taking seriously managers' (rather than "leaders") behaviors as key determinants of the workings of the contemporary workplace. Although sociologists, more than other scholars, focus on workplace relationships, power, conflict, and authority, this body of scholarship (with some exceptions noted previously), has focused inconsistently on the behaviors in which managers engage that either enhance or inhibit positive outcomes for workers. Our research accomplishes this task in addition to building on and extending that of Hodson and his colleagues. We began this article asking how, in an economy characterized by insecurity, organizational disruption, and increasingly fast-paced and high-pressure workplaces, employers can create conditions that enhance employee well-being, commitment, and satisfaction, thus likely the well-being of the organization. Clearly, as Hodson noted (2004), maintaining workplaces that are well run and in which employees are treated with respect contributes to creating a positive-sum game at work. We have shown that a crucial part of maintaining such workplaces is ethical and family-supportive behaviors on the part of managers. Our research provides clear guidance to managers who are navigating their organizations through the very difficult seas of the current economy. Our findings highlight the importance of clear, honest communication as an essential component of the well-run workplace that enhances not only trust but also job satisfaction and committed effort by mentally healthy workers. Although the management and I/O literature is somewhat mixed about the desirability of these outcomes, we are not. Certainly our results point to and reinforce Hodson's previous claims that it is possible to structure workplaces to create win-win social relationships. The 25 years after World War II (what some have called the era of the labor-capital accord between big business and big labor, the Fordist era, or a "golden age" in which employers and employees were on the same page) were an historical moment in which the interests of some employers and some employees were coordinated (Rubin, 1996). Focusing on increasing MCB points to a concrete strategy by which all managers and employees, not just the "big ones," can similarly be coordinated as we move forward in increasingly turbulent and risky times.	EBSCO
Prädiktoren gesundheitsförderlichen Führungshandelns	Barbara Pangert	Literatur-nachweis	2011			-	Zahlreiche Studien weisen auf einen Zusammenhang zwischen Führungshandeln und Beschäftigtengesundheit hin. Entsprechend der Literaturrecherche in dieser Arbeit lässt sich gesundheitsförderliches Führungshandeln beschreiben als mitarbeiterorientiert-unterstützendes Führungshandeln, die Gestaltung gesundheitsförderlicher Arbeits-bedingungen sowie das Engagement für die betriebliche Gesundheitsförderung. Aber was macht es eigentlich wahrscheinlich, dass Führungskräfte auf eine Art und Weise handeln, welche sich gesundheitsförderlich für die Beschäftigten darstellt? In der vorliegenden Arbeit wurden Prädiktoren gesundheitsförderlichen Führungshandelns abgeleitet und auf ihre empirischen Zusammenhänge mit gesundheitsförderlichem Führungshandeln hin untersucht. Als Basis für die Ableitung von Prädiktoren wurde die Theorie des geplanten Verhaltens (Ajzen, 1991) gewählt. Entsprechend der Theorie des geplanten Verhaltens ist davon auszugehen, dass die Einstellung gegenüber dem Verhalten, die subjektive Norm im Sinne des sozialen Drucks, das Verhalten zu zeigen sowie die wahrgenommene Verhaltenskontrolle im Sinne der Leichtigkeit oder Schwierigkeit, eine Handlung auszuführen sich darauf auswirken, ob ein bestimmtes Verhalten gezeigt wird oder nicht. Verschiedene arbeits- und organisationspsychologische Konzepte wurden dahingehend beleuchtet, inwiefern sie der Anpassung der Komponenten der Theorie des geplanten Verhaltens auf das Setting gesundheitsförderlichen Führungshandelns dienen können. Dabei ist davon auszugehen, dass in Bezug auf die subjektive Norm im organisationalen Setting gesundheitsförderlichen Führungshandelns die wahrgenommene Organisations-kultur eine wichtige Rolle spielt, konkret die wahrgenommene Kultur gesundheitsförderlichen Führungshandelns. Die wahrgenommene Verhaltenskontrolle bezieht sich bei Ajzen (1991) auf interne wie externe Faktoren. Im organisationalen Setting gesundheitsförderlichen Führungshandelns erscheinen dabei die individuellen Kompetenzen, konkret die Kompetenz, gesundheitsförderlich zu führen sowie die organisationalen Bedingungen, gesundheitsförderlich zu führen, speziell der von Führungskräften wahrgenommene Tätigkeitsspielraum, zentral. Gemeinsam mit der Einstellung aus der Theorie des geplanten Verhaltens werden in dieser Arbeit damit vier Prädiktoren gesundheitsförderlichen Führungshandelns angenommen: die wahrgenommene Kultur gesundheitsförderlichen Führungshandelns, die Einstellung gegenüber gesundheitsförderlichem Führungshandeln, die individuelle Kompetenz, gesundheitsförderlich zu führen sowie der von Führungskräften wahrgenommene Tätigkeitsspielraum. Zu Überprüfung der erwarteten Zusammenhänge zwischen den angenommenen Prädiktoren und gesundheitsförderlichem Führungshandeln wurde eine Querschnittsuntersuchung bei 222 Führungskräften der unteren und mittleren Führungsebenen aus drei Unternehmen durchgeführt. In Ermangelung geeigneter Erhebungsinstrumente wurden die Prädiktoren ebenso wie gesundheitsförderliches Führungshandeln anhand verschiedener selbstkonstruierter Fragebogenskalen messbar gemacht. Die Skalenqualität wurde auf verschiedene Gütekriterien hin anhand mehrerer methodischer Verfahren überprüft und optimiert. Die resultierende Skalengüte ist als zufriedenstellend bis sehr gut zu bewerten. Die Ergebnisse zeigen beinahe durchgängig die erwarteten bivariaten Zusammenhänge zwischen den Prädiktoren und den drei Komponenten gesundheitsförderlichen Führungshandelns. Bei der regressionsanalytischen Prognose der Komponenten gesundheitsförderlichen Führungshandelns anhand der vier Prädiktoren zeigt sich auch bei Berücksichtigung von Kontrollvariablen eine gemeinsame Varianzaufklärung durch die vier Prädiktoren zwischen 9 und 29 Prozent (p < .01). Die Einstellung gegenüber gesundheitsförderlichem Führungshandeln leistet als einziger Prädiktor bei allen drei Komponenten gesundheitsförderlichen Führungshandelns einen signifikanten eigenständigen Beitrag zur Varianzaufklärung. Für die Vorhersage der Gestaltung gesundheitsförderlicher Arbeitsbedingungen ist insbesondere der wahrgenommene Tätigkeitsspielraum, für die Vorhersage des Engagements für die betriebliche Gesundheitsförderung ist insbesondere die wahrgenommene Kultur gesundheits-förderlichen Führungshandelns von Relevanz. Eine Übersicht über die Ergebnisse der Regressionsanalyse findet sich in nachfolgender Abbildung. Vor dem Hintergrund der Theorie des geplanten Verhaltens sowie der zu Grunde liegenden arbeits- und organisationspsychologischen Konzepte lassen sich die Ergebnisse als Hinweis darauf interpretieren, dass die betrachteten Prädiktoren von Relevanz für die Realisierung gesundheitsförderlichen Führungshandelns sind. Gleichzeitig sind alternative Interpretationen der Ergebnisse denkbar. Durch das querschnittliche Design lassen sich auf Basis der Ergebnisse keine Kausalaussagen treffen. Die Studie gibt damit insbesondere Implikationen für die weitere Forschung in einem bislang vernachlässigten Forschungsbereich, aber auch erste Hinweise für die Praxis betrieblicher Gesundheitsförderung.	WISO
Quality management and health: a double connection	Yvonne Lagrosen, Ingela Bäckström, Stefan Lagrosen	Journals	2007 International Journal of Quality & Reliability Management	24	1	Studienziel	The studies have indicated that quality management can have a double effect regarding health. By improving the job situation its usage can contribute to better health among the employees and prevent disease. By increasing the effectiveness of health care organisations it can also play a role in the treatment of disease. Furthermore, the studies have pointed to the commitment of managers as the most central of the common factors for achieving a healthy work place as well as creating efficient organisations. This is in accordance with the findings of, for instance, Hackman and Wageman (1995), who also explored this topic in their framework about TQM theory and practices. Additionally, the factors of continuous improvements, participation of everybody, information and customer orientation were found to be, in certain instances related to employee health status and/or successful quality management implementation. These results could serve as a basis for how companies can improve the health of their employees through changes in the organisation and letting these values permeate the organisation's culture. Furthermore, the tools and techniques of quality management are obviously also needed in order to make the values part of the daily activities. The studies have emphasised the value of leadership commitment both for the health of the employees and for the general successfulness of quality management initiatives. Therefore, the main focus for managers should be to uphold their own commitment and top management should inspire managers on all levels to make commitment to quality their first priority. In doing this, one of the main aspects is probably that managers act as good role models and adopt a healthy and positive lifestyle themselves. Since participation also seems to be important managers should ensure that the employees are empowered and that they have the possibility to influence their own work situation as well as the wider issues of the organisation. Continuous improvements should also be promoted. One limitation of this study is that it has only identified these rather wide factors. In order to understand the connections more completely and to employ the factors in practice it is vital to know their mechanisms more completely. In further research, it should thus be valuable to probe deeper into these factors. For instance, this study has indicated the importance of leadership commitment. Elaborating this concept in order to see what aspects of commitment from the leaders that are most important and the mechanics of their influence should be particularly valuable.	Emerald

The Employer's Case for Health Management	Christopher H. Coulter	Journals	2006 Benefits Quarterly	22	1	Studienziel	Employers squeezed between rising health benefit costs and growing employee resistance to cost shifting and benefit cutbacks cannot anticipate much relief without making major changes in their approach to providing health benefits. Costs will continue to rise, the employee burden of illness will likely increase and our inefficient and disorganized health care system will not improve in the near future.A different approach is needed. By using an integrated approach to improving the health status of employees and supporting their evolution into effective health care consumers, employers can reduce their benefit cost increases and enhance the value of their benefit programs, while maintaining and improving the satisfaction of their employees. Large case management, disease management and health promotion—particularly programs that incorporate online programs—offer a way out of the dilemma and also support enhanced productivity.Without health management and support for consumer-oriented benefit changes, it is difficult to see any alternative to unsustainable cost increases for most employers. The impact of management programs on physicians' work environment and health: A prospective, controlled study comparing different interventions	Pia Jansson von Vultée, Bengt Arnetz	Journals	2004 Journal of Health Organization and Management	18	1	Studienziel	Female physicians participating in management intervention programs were compared with a reference group of matched physicians. Sickness absenteeism was significantly lower in the intervention group as compared to the control group following the one-year intervention. No significant differences were found between the groups with regard to career advancement, individual, organisational and professional well-being. Focus is the management programme.	Emerald
The relationship between leadership support, workplace health promotion and employee wellbeing in South Africa	K Milner, M Greyling, R Goetzel, R da Silva, T Kolbe-Alexander, D Patel, C Nossel, M Beckowski	Journals	2013 Health Promot Int.			Studienziel	Leadership support has been identified as an essential component of successful workplace health promotion (WHP) programs. However, there is little research in this area and even less theoretical conceptualization on ways in which leadership support for WHP is related to improved employee wellbeing. In this paper, we developed and tested a model of leadership support for WHP and employee wellbeing outcomes using employer and employee data gathered from 71 South African organizations. A theoretical model based on social exchange theory was developed. It was hypothesized that perceptions of company commitment to health promotion mediates the relationship between leadership support, the provision of WHP facilities and employee wellbeing. A hierarchical structural equation modeling technique was used to test the model. We determined that leaders' support for WHP was important insofar as they also provided health promotion facilities to their employees. No direct relationship was found between leadership support alone and employee wellbeing.	PubMed
