

Contents

1	Introduction	1
2	Fundamentals of Elasticity	5
2.1	The Deformation Tensor	8
2.2	The Stress Tensor	14
2.3	Microscopic Constitution	17
2.4	Neo-Hooke, A Statistical Approach to Rubber Elasticity	22
2.5	Refined Models of Rubber Elasticity	28
2.5.1	The Mooney-Rivlin Approach	28
2.5.2	The Gent Model	30
2.5.3	The Ogden Model	32
2.6	Application of Rubber Elasticity to Common Forms of Deformation	33
3	Design of the Measurement Device	39
3.1	Lego Mindstorms	41
3.1.1	A Short History of LEGO Mindstorms	42
3.1.2	The Hands-On Experience	44
3.1.3	Not just a Kids Toy	45
3.1.4	NXT Implementation in NI LabView	46
3.2	Sample Clamping and Stretching	48
3.3	Data Acquisition	51
3.3.1	Communication: Sensor Board - NXT	52
3.3.2	Strain-Measurement	55
3.3.3	Stress-Measurement	62
3.3.4	Resistance-Measurement	66
4	Pertinent Example Measurements	71
4.1	Determination of Young's Modulus	71

4.1.1	Sample Preparation	71
4.1.2	Sample Geometry	72
4.1.3	Comparison of Fit-Models	77
4.1.4	Young's Modulus for different degrees of cross-linking	81
4.1.5	Young's Modulus for different rates of strain	83
4.2	Determination of the Resistance of Stretchable Electrodes .	85
4.2.1	Sample Preparation	85
4.2.2	Substrate Geometry	86
4.3	Measurement Procedure	89
5	Conclusion & Outlook	95
6	Appendix	99
6.1	Intelligent Sensor Schematics	99
6.2	Microcontroller Firmware	110
6.2.1	Main Routine	111
6.2.2	Data Acquisition Routine	114
6.2.3	NXT Communication Routine	122
6.3	Sample Grip CAD	134
