

# Contents

<b>1</b>	<b>Energy Release in Nuclear Reactions, Neutrons, Fission, and Characteristics of Fission . . . . .</b>	<b>1</b>
1.1	Notational Conventions for Mass Excess and $Q$ -Values . . . . .	1
1.2	Rutherford and the Energy Release in Radium Decay . . . . .	3
1.3	Rutherford's First Artificial Nuclear Transmutation . . . . .	5
1.4	Discovery of the Neutron . . . . .	6
1.5	Artificially-Induced Radioactivity and the Path to Fission . . . . .	14
1.6	Energy Release in Fission . . . . .	19
1.7	The Bohr–Wheeler Theory of Fission: The $Z^2/A$ Limit Against Spontaneous Fission . . . . .	20
1.8	Energy Spectrum of Fission Neutrons . . . . .	26
1.9	Leaping the Fission Barrier . . . . .	29
1.10	A Semi-Empirical Look at the Fission Barrier . . . . .	34
1.11	A Numerical Model of the Fission Process . . . . .	38
	1.11.1 Volume and Surface Areas; Volume Conservation . . . . .	40
	1.11.2 Surface and Coulomb Energies . . . . .	43
	1.11.3 Results . . . . .	45
	References . . . . .	47
<b>2</b>	<b>Critical Mass and Efficiency . . . . .</b>	<b>49</b>
2.1	Neutron Mean Free Path . . . . .	50
2.2	Critical Mass: Diffusion Theory . . . . .	55
2.3	Effect of Tamper . . . . .	63
2.4	Estimating Bomb Efficiency: Analytic . . . . .	69
2.5	Estimating Bomb Efficiency: Numerical . . . . .	81
	2.5.1 A Simulation of the Hiroshima Little Boy Bomb . . . . .	83
2.6	Another Look at Untamped Criticality: Just One Number . . . . .	86
2.7	Critical Mass of a Cylindrical Core (Optional) . . . . .	89
	References . . . . .	96

<b>3</b>	<b>Producing Fissile Material</b>	97
3.1	Reactor Criticality	97
3.2	Neutron Thermalization	101
3.3	Plutonium Production	104
3.4	Electromagnetic Separation of Isotopes	107
3.5	Gaseous (Barrier) Diffusion	113
	References	119
<b>4</b>	<b>Complicating Factors</b>	121
4.1	Boron Contamination in Graphite	121
4.2	Spontaneous Fission of $^{240}\text{Pu}$ , Predetonation, and Implosion	124
4.2.1	Little Boy Predetonation Probability	128
4.2.2	Fat Man Predetonation Probability	129
4.3	Predetonation Yield	132
4.4	Tolerable Limits for Light-Element Impurities	139
	References	143
<b>5</b>	<b>Miscellaneous Calculations</b>	145
5.1	How Warm Is It?	145
5.2	Brightness of the <i>Trinity</i> Explosion	146
5.3	A Model for Trace Isotope Production in a Reactor	151
	References	156
<b>6</b>	<b>Appendices</b>	157
6.1	Appendix A: Selected $\Delta$ -Values and Fission Barriers	157
6.2	Appendix B: Densities, Cross-Sections, Secondary Neutron Numbers, and Spontaneous-Fission Half-Lives	158
6.2.1	Thermal Neutrons (0.0253 eV)	158
6.2.2	Fast Neutrons (2 MeV)	158
6.3	Appendix C: Energy and Momentum Conservation in a Two-Body Collision	159
6.4	Appendix D: Energy and Momentum Conservation in a Two-Body Collision That Produces a Gamma-Ray	162
6.5	Appendix E: Formal Derivation of the Bohr–Wheeler Spontaneous Fission Limit	164
6.5.1	Introduction	164
6.5.2	Nuclear Surface Profile and Volume	165
6.5.3	The Area Integral	170
6.5.4	The Coulomb Integral and the SF Limit	171
6.6	Appendix F: Average Neutron Escape Probability from Within a Sphere	179
6.7	Appendix G: The Neutron Diffusion Equation	184
6.8	Appendix H: Exercises and Answers	192
6.9	Appendix I: Glossary of Symbols	203

6.10	Appendix J: Further Reading . . . . .	209
6.10.1	General Works . . . . .	209
6.10.2	Biographical and Autobiographical Works . . . . .	211
6.10.3	Technical Works . . . . .	213
6.10.4	Websites . . . . .	215
6.11	Appendix K: Useful Constants and Rest Masses . . . . .	217
	References . . . . .	217
<b>Index</b>	. . . . .	<b>219</b>
