1	Introduction—MEMS, a Historical Perspective	1
	References	4
2	Vacuum Technology	7
2.1	Introduction into Vacuum Technology	7
2.1.1	Importance of Vacuum Technology for Processing and Characterization	7
2.1.2	Historical Overview	8
2.1.3	Vacuum Technology Basics	11
2.2	Gas Properties	14
2.2.1	Kinetic Gas Behavior	14
2.2.2	Ideal and Real Gas	21
2.3	Gas Flow	22
2.3.1	Flow Regimes	22
2.3.2	Viscous Flow	23
2.3.3	Molecular Flow and Transition Regime	23
2.4	Vacuum Systems—Overview	24
2.4.1	Vacuum Chamber	24
2.4.2	Pumps	25
2.5	Roughing Pumps	27
2.5.1	Rotary Vane Pump	27
2.5.2	Rotary Piston Pump	28
2.5.3	Roots Pump	29
2.5.4	Diaphragm Pump	30
2.6	High Vacuum Pumps I—Kinetic Transfer Pumps	31
2.6.1	Diffusion Pump	32
2.6.2	Turbomolecular Pump	33
2.6.3	Turbomolecular Drag Pump	35
2.7	High Vacuum Pumps II—Entrapment Pumps	36
2.7.1	Cryogenic Pumps I—Cryopump	36
2.7.2	Cryogenic Pumps II—Meissner Trap	39

2.7.3	Getter and Sputter Ion Pumps	40
2.8	Vacuum Seals	42
2.8.1	Elastomer Seals	42
2.8.2	Metal Seals	43
2.9	Vacuum Measurement and Analysis	43
2.9.1	Introduction into Pressure Measurement.	43
2.9.2	Direct-Reading Pressure Gauges	44
2.9.3	Indirect-Reading Gauges—Thermal Conductivity Gauges	46
2.9.4	Indirect-Reading Gauges—Ionization Gauges	48
2.9.5	Flow Meter and Mass Flow Controller	49
2.9.6	Residual Gas Analysis (RGA)	50
2.10	Desorption and Leaks	53
2.10.1	Gas Release from Solids	53
2.10.2	Leaks and Leak Detection	56
2.11	Vacuum Pump Applications	57
2.11.1	Selection	57
2.11.2	Examples of Vacuum Systems Used in Research	58
	References.	62
3	Deposition Technologies	65
3.1	Introduction and Historic Background	65
3.1.1	The Origins of Thin-Film Technology	65
3.1.2	Introduction into Deposition.	66
3.2	Thermal Physical Vapor Deposition (Thermal PVD)	67
3.2.1	Introduction into Thermal PVD and Historic Overview.	67
3.2.2	Evaporation Process Theory	68
3.2.3	Evaporation Hardware and Process	81
3.2.4	Molecular Beam Epitaxy (MBE).	88
3.2.5	Pulsed Laser Deposition (PLD).	93
3.3	Plasma and Arc Physical Vapor Deposition (Plasma/Arc PVD)	94
3.3.1	Introduction and History	94
3.3.2	Plasma Physics.	96
3.3.3	Physics of Sputtering.	106
3.3.4	Sputtering Hardware and Process	116
3.3.5	Ion Beam Deposition (IBD).	120
3.3.6	Cathodic Arc Plasma and Filtered Cathodic Arc Deposition.	122
3.4	Hybrid PVD Processes	124
3.4.1	Introduction	124
3.4.2	Ion Beam Assisted Evaporation	124

3.5	Chemical Vapor Deposition (CVD)-Like Processes	125
3.5.1	Introduction into CVD-Like Processes and Historic Overview.	125
3.5.2	Reaction Types.	127
3.5.3	Thermodynamics of CVD	130
3.5.4	Gas Transport.	136
3.5.5	Film Growth Kinetics	140
3.5.6	Thermal CVD—Reactors and Processes.	147
3.5.7	Plasma-Enhanced Chemical Vapor Deposition (PECVD)—Reactors and Processes	150
3.5.8	Laser-Induced Chemical Vapor Deposition (LCVD).	154
3.5.9	CVD Gas Safety and Analysis	155
3.5.10	Atomic Layer Deposition (ALD).	156
3.6	Physical-Chemical Hybrid Processes	164
3.6.1	Activated Reactive Evaporation (ARE)	164
3.6.2	Reactive Sputtering	165
3.7	Liquid-Phase Deposition by Spin-Coating, Spray-Coating, and Dip-Coating	169
3.7.1	Introduction	169
3.7.2	Spin-Coating	170
3.7.3	Spray-Coating	173
3.7.4	Dip-Coating	173
3.8	Solgel Technology	174
3.8.1	Solgel Process Basics	174
3.8.2	Solgel Process Example.	175
3.9	Electrochemical and Chemical Reaction Deposition.	176
3.9.1	Electrochemical Deposition	176
3.9.2	Chemical Deposition: Electroless Plating	189
3.9.3	Electrophoretic Deposition (EPD)	190
	References.	196
4	Etching Technologies	205
4.1	Etching Technologies Basics	205
4.1.1	Introduction into Etching	205
4.1.2	History of Etching	207
4.2	Wet-Chemical Etching.	208
4.2.1	Wet-Chemical Etching Processes	208
4.2.2	Wet-Chemical Etching of Single Crystal Silicon	211
4.2.3	Etching of Insulators and Dielectrics	231
4.2.4	Etching of Conductors.	232
4.3	Dry Etching	234
4.3.1	Introduction	234
4.3.2	Physical Etching.	235

4.3.3	Chemical Dry Etch	249
4.3.4	Physical–Chemical Processes	255
4.4	Mechanical and Mechanical–Chemical Etching	264
4.4.1	Introduction	264
4.4.2	Powder Blasting	264
4.4.3	Gas Cluster Ion Beam (GCIB) Technology	265
	References.	268
5	Doping and Surface Modification	273
5.1	Introduction	273
5.1.1	The Importance of Doping and Surface Modification	273
5.1.2	History of Doping and Surface Modification	273
5.2	Introduction into Doping	275
5.2.1	Electrical Conductivity in Solids.	275
5.2.2	Semiconductor Properties and Doping of Silicon.	276
5.3	Doping by Diffusion	278
5.3.1	Introduction	278
5.3.2	Dopant Diffusion	278
5.3.3	Theoretical Description of Diffusion	279
5.3.4	Atomistic Model of Diffusion.	282
5.3.5	Diffusion Furnace and Process	284
5.4	Doping by Implantation.	288
5.4.1	Introduction into Implantation.	288
5.4.2	Implantation Science	289
5.4.3	Ion Implanter	295
5.4.4	Rapid Thermal Processing (RTP)	299
5.5	Doping Applications	300
5.5.1	MEMS Applications	300
5.5.2	Wafer Technology Applications	301
5.6	Thermal Oxidation of Silicon	302
5.6.1	Introduction	302
5.6.2	General Properties of SiO ₂	303
5.6.3	Oxidation Mechanisms	303
5.6.4	Oxidation Equipment and Process.	307
5.6.5	Applications of Thermal SiO ₂	309
	References.	310
6	Lithography	313
6.1	Overview and Historic Development	313
6.1.1	Introduction	313
6.1.2	Historic Development	315
6.2	Mask-Based Lithography I—Optical Lithography	317
6.2.1	Introduction	317

6.2.2	Optical Lithography Process Sequence.	318
6.2.3	Optical Basics of Lithography I—Exposure Alternatives	326
6.2.4	Optical Basics of Lithography II—Physical Limitations of Optics.	329
6.2.5	Selected Photolithography Tools and Processes.	346
6.2.6	Advanced Semiconductor Lithography Processes	355
6.3	Mask-Based Lithography II: X-Ray Lithography (XRL) Systems.	364
6.3.1	Introduction	364
6.3.2	XRL Principle	364
6.3.3	XRL Mask Fabrication	366
6.4	Direct Write Lithography	367
6.4.1	Laser Lithography.	367
6.4.2	E-Beam Lithography	371
6.5	Scanning Probe-Based Lithography	374
6.5.1	Introduction	374
6.5.2	AFM-Based Nanoscratch Lithography	374
6.5.3	Dip-Pen Nanolithography (DPN)	375
6.6	Nanofabrication by Replication and Pattern Transfer	376
6.6.1	Nanoimprint Lithography (NIL)	376
6.6.2	Soft Lithography.	377
6.7	Photoresist and Ink	380
6.7.1	Aggregate State Alternatives	380
6.7.2	UV Resists, Soluble When Cured	381
6.7.3	UV Resists, Non-soluble When Cured: SU-8	383
6.7.4	Two-Photon Absorption Resists	384
6.7.5	X-Ray, E-Beam, and EUV Resists	385
6.7.6	Nanoimprint Resists	387
6.7.7	Inks	388
	References.	389

7.1	Introduction	397
7.2	LIGA Infrastructure.	398
7.2.1	Challenge	398
7.2.2	Synchrotron Radiation Source	398
7.2.3	Electrochemical Deposition Capabilities.	400
7.2.4	Replication Capabilities	401
7.3	LIGA Fabrication	401
7.3.1	Mask Fabrication	401
7.3.2	X-Ray Lithography Process	403
7.3.3	Mold Insert Fabrication by Electrodeposition	404

7.3.4	Replication.	405
7.4	Direct LIGA.	405
7.5	LIGA and Direct LIGA Production Samples	405
7.5.1	LIGA Production Sample: Microspectrometer.	405
7.5.2	Direct LIGA Product Samples: Escapement Parts	406
7.6	LIGA and HARMST.	407
	References.	408
8	Nanofabrication by Self-Assembly	409
8.1	Introduction and Historic Background	409
8.1.1	Top-Down and Bottom-Up Nanofabrication	409
8.1.2	Historic Background	410
8.2	Self-Assembly Process.	411
8.2.1	Introduction into Self-Assembly	411
8.2.2	Chemical, Physical, and Colloidal Self-Assembly	411
8.2.3	Static and Dynamic Self-Assembly	412
8.2.4	Co-Assembly	413
8.2.5	Hierarchical Self-Assembly	413
8.2.6	Directed (or Guided) Self-Assembly—Basics	414
8.2.7	The Role of Defects in Self-Assembly.	414
8.3	Self-Assembled Monolayers (SAMs).	415
8.4	Directed Self-Assembly—Mechanisms.	416
8.4.1	Surface Topography	416
8.4.2	Surface Wetting	417
8.5	Nanosystem Building Blocks—Examples.	418
8.5.1	DNA Scaffolds.	418
8.5.2	Carbon Nanotubes (CNTs).	419
8.5.3	Block Copolymers	420
8.5.4	Porous Alumina	421
	References.	422
9	Enabling Technologies I—Wafer Planarization and Bonding	425
9.1	Introduction	425
9.2	Wafer Planarization.	426
9.2.1	Planarization Challenge	426
9.2.2	History of CMP in the Semiconductor Industry	427
9.2.3	CMP Equipment and Consumables	429
9.2.4	CMP Process and Issues	436
9.2.5	CMP Applications	437
9.3	Wafer Bonding.	438
9.3.1	Introduction	438
9.3.2	Anodic Bonding	438
9.3.3	Silicon Fusion Bonding	443

9.3.4	Bond Alignment	447
9.3.5	Direct Wafer Bonding Applications	449
	References	452
10	Enabling Technologies II—Contamination Control	455
10.1	Introduction	455
10.1.1	The Necessity for Cleanliness	455
10.1.2	Contamination Removal by Cleaning	456
10.1.3	Minimization of Contamination by Fabrication in a Clean Environment	457
10.2	Cleaning Technology	457
10.2.1	Cleaning—An Overview	457
10.2.2	Aqueous Cleaning	458
10.2.3	Solvent Cleaning	465
10.2.4	Mechanical Cleaning	467
10.2.5	Rinsing and Drying	468
10.2.6	Dry Cleaning Technology	471
10.3	Cleanroom Technology	472
10.3.1	Introduction and History	472
10.3.2	Cleanroom Classification Standards	474
10.3.3	Laminar Airflow	476
10.3.4	High Efficiency Air Filtration	477
10.3.5	Cleanroom	479
10.3.6	Local Clean Area Solutions	484
10.3.7	Cleanroom Staff	487
	References	491
11	Device Fabrication—An Example	495
11.1	Introduction	495
11.2	Device Description	496
