Part I Current and Forthcoming Observing Facilities

1	Future Observations of Cosmic Magnetic Fields with LOFAR, SKA and Its Precursors	3
	Rainer Beck	
1.1	Prospects of Future Magnetic Field Observations	3
1.1.1	Diffuse Polarized Emission	3
1.1.2	Rotation Measure Grids	5
1.1.3	Magnetic Fields of the Milky Way.....	6
1.1.4	Intergalactic Filaments	6
1.2	Faraday Rotation Measure Synthesis.....	7
1.3	Low Frequency Array	9
1.4	Square Kilometre Array.....	11
1.4.1	Technical Design and Development of the SKA.....	11
1.4.2	SKA Key Science Projects	13
1.4.3	SKA Timeline.....	14
1.5	SKA Pathfinder and Precursor Telescopes	14
	References.....	16
2	Magnetic Fields with the Atacama Large Millimeter/Submillimeter Array	19
	Wouter Vlemmings	
2.1	The Atacama Large Millimeter/Submillimeter Array	19
2.1.1	ALMA Specifications	20
2.1.2	ALMA Science	22
2.2	ALMA Polarization Calibration	22
2.3	Magnetic Field Observations with ALMA	24
2.3.1	(Sub-)Millimetre Polarization.....	24
2.3.2	Star Formation and Molecular Clouds.....	26

2.3.3	Evolved Stars and Planetary Nebulae	29
2.3.4	Nearby Galaxies	32
2.4	ALMA Polarization Analysis Tools: The ARTIST Project	34
	Conclusion	35
	References	36

Part II Techniques for Observing Cosmic Magnetic Fields

3	Synchrotron Radiation and Faraday Rotation	41
	George Heald	
3.1	Introduction	41
3.2	Synchrotron Radiation	42
3.2.1	Estimation of Magnetic Field Strength	43
3.3	Polarization and Faraday Rotation	44
3.4	Rotation Measure Synthesis	45
3.4.1	RM Synthesis Deconvolution	49
3.4.2	Wavelet Based RM Synthesis	52
3.5	Outlook	53
	References	54
4	Interstellar Grain Alignment: Observational Status	59
	B-G Andersson	
4.1	Introduction	59
4.2	Grain Alignment Theories	66
4.2.1	Theoretical Predictions Amenable to Observational Tests	69
4.3	Observational Considerations	73
4.4	Observational Constraints on Grain Alignment Mechanisms	76
4.4.1	Davis-Greenstein Alignment	76
4.4.2	Super-Paramagnetic Alignment	77
4.4.3	Suprathernal Spin Alignment	78
4.4.4	Mechanical (Gold) Alignment	80
4.4.5	Radiative Alignment	80
	Summary and Conclusions	82
	References	84
5	Magnetic Field Measurement with Ground State Alignment	89
	Huirong Yan and A. Lazarian	
5.1	Introduction	90
5.2	History on Studies Related to Atomic Alignment	93
5.3	Basic Physics of GSA	94
5.3.1	Timescales	96
5.3.2	Different Regimes	97
5.4	Polarization of Absorption Lines	99
5.4.1	Is There Any Circular Polarization?	102
5.5	IR/Submillimetre Transitions Within Ground State	103

5.6	Atoms with Hyperfine Structure	105
5.7	Polarization of Resonance and Fluorescence Lines	106
5.8	Influence of Magnetic field on Polarization and Line Intensity	108
5.9	Observational Perspective.....	109
5.9.1	Interstellar Absorption and 3D Magnetic Field Measurement.....	109
5.9.2	Circumstellar Absorption	111
5.9.3	Fluorescence from Reflection Nebulae	111
5.9.4	Magnetic Field in PDR Regions	112
5.10	Observational Tests.....	113
5.11	GSA and Cosmological Studies	114
5.11.1	Magnetic Field in the Epoch of Reionization?	114
5.11.2	Influence on Abundance Studies	115
5.11.3	Metal Detection in Early Universe.....	116
5.12	Feasibility of GSA Studies.....	117
5.13	Summary.....	118
	References.....	118

Part III MF in Turbulent Media

6	Kinetic Turbulence	123
	Gregory G. Howes	
6.1	Introduction.....	123
6.1.1	Quantitative Characterization of Plasma Turbulence	124
6.1.2	Limits of MHD Treatment of Astrophysical Turbulence	124
6.1.3	Importance of Kinetic Turbulence	131
6.2	Key Questions About Kinetic Turbulence	132
6.3	A Model of the Kinetic Turbulent Cascade	133
6.3.1	MHD Inertial Range: From Driving Scales to the Collisional Transition.....	135
6.3.2	MHD Inertial Range: From the Collisional Transition to the Ion Larmor Radius.....	137
6.3.3	Transition at the Ion Larmor Radius	139
6.3.4	Kinetic Dissipation Range: Between the Ion and Electron Larmor Radius	140
6.3.5	Kinetic Dissipation Range: Termination at Electron Larmor Radius	144
6.3.6	Irreversible Heating Via the Ion and Electron Entropy Cascades.....	145
	Conclusion	146
	References.....	148

7	Interstellar Polarization and Magnetic Turbulence	153
	Terry Jay Jones	
7.1	Polarization in Transmission and Emission	153
7.2	Turbulence and the Field Strength	154
7.3	Turbulence and the Position Angle Structure Function	157
7.4	Global Statistics	158
7.5	Future Work	160
	References	161
8	MHD Turbulence, Turbulent Dynamo and Applications	163
	Andrey Beresnyak and Alex Lazarian	
8.1	Introduction	163
8.2	Astrophysical Dynamo	164
	8.2.1 Universal Nonlinear Small-Scale Dynamo	166
	8.2.2 Locality of the Small-Scale Dynamo	167
	8.2.3 MHD Cascade, $k \gg k^*$	168
	8.2.4 Hydro Cascade, $k \ll k^*$	168
	8.2.5 Dynamo Cascade $k = k^*$	169
	8.2.6 Numerical Results	169
	8.2.7 On the Efficiency of Small-Scale Dynamo	170
8.3	MHD Turbulence in the Inertial Range	171
	8.3.1 Basic Equations	172
	8.3.2 Basic Scalings in the Balanced Case	174
	8.3.3 Structure Functions and Spectra	176
	8.3.4 The Numerical Scaling Argument	178
	8.3.5 Numerical Experiments	180
	8.3.6 Resolution Study for Balanced Spectra	182
	8.3.7 Dynamic Alignment: Theories vs Measurements	183
	8.3.8 Dynamic Alignment: Relation to Spectra	185
	8.3.9 Anisotropy: Balanced Case	187
	8.3.10 Basic Properties of Balanced MHD Turbulence	188
8.4	Imbalanced MHD Turbulence	189
	8.4.1 Theoretical Considerations	191
	8.4.2 Lithwick, Goldreich and Sridhar (Lithwick et al. 2007) Model, LGS07	192
	8.4.3 Beresnyak and Lazarian (Beresnyak and Lazarian 2008) Model, BL08	192
	8.4.4 Perez and Boldyrev (2009) Model, PB09	193
	8.4.5 Imbalanced Simulations	194
	8.4.6 Nonlinear Cascading and Dissipation Rate	194
	8.4.7 Imbalanced Spectra	196
	8.4.8 Imbalanced Anisotropies	196
8.5	Compressibility in MHD Turbulence	199
	8.5.1 Decomposition into Fundamental Modes	199
	8.5.2 Other Ways of Decomposition into Fundamental Modes	203

8.5.3	Decomposition into Solenoidal and Potential Modes	205
8.5.4	Density Scalings	206
8.5.5	Viscosity-Dominated Regime of MHD Turbulence	207
8.5.6	Application of Results to Collisionless Fluids	210
8.5.7	Outlook on Relativistic Turbulence	211
8.6	Intermittency of MHD Turbulence	212
8.6.1	General Considerations	212
8.6.2	She-Leveque Model of Intermittency	213
8.6.3	Intermittency of Incompressible Turbulence	213
8.6.4	Intermittency of Compressible Turbulence	214
8.6.5	Intermittency of Viscosity-Damped Turbulence	216
8.7	Selected Implications of MHD Turbulence and Turbulent Dynamo	217
8.7.1	Magnetic Reconnection in the Presence of MHD Turbulence	217
8.7.2	Turbulence and Particle Acceleration	219
8.7.3	Thin Structures in the Interstellar Medium	219
8.7.4	Intermittent Turbulent Heating of Interstellar Gas	220
8.7.5	Suppression of Instabilities by Alfvénic Turbulence	221
8.7.6	Turbulent Dynamo and High Redshift Physics	222
