1	Introduction	1
	References	6
2	Basic Assumptions and Equations of Electroanalytical Models	9
2.1	General Assumptions	9
2.2	Equations of Transport in Electrolytes	11
2.3	Equations of Transport in Non-electrolytes	14
2.4	Spatial Domains, Their Dimensionality, and Coordinate Systems	14
2.5	Diffusion Fields	17
2.6	Convection-Diffusion Fields	18
2.6.1	Dropping Mercury Electrode	18
2.6.2	Rotating Disk Electrode	20
2.6.3	Channel and Tubular Electrodes	22
2.7	Equations for Reaction Kinetics	24
2.8	The Effect of Homogeneous Reactions on Transport PDEs	31
2.9	The Effect of Heterogeneous Reactions on Boundary Conditions and Governing Equations for Localised Species	32
2.10	The Effect of Reactions on Initial Conditions	35
2.11	Electroanalytical Methods	36
2.12	Anomalous Diffusion	38
2.13	Uncompensated Ohmic Drop and Double Layer Charging	40
	References	42
3	Mathematical Preliminaries	49
3.1	Integral Equations: Basic Concepts and Definitions	49
3.2	The Laplace Transformation	54
3.3	The Fourier Transformation	56
3.4	The Hankel Transformation	57
	References	58

4	Models Independent of Spatial Coordinates	61
4.1	Derivation of the IEs	62
4.2	Literature Examples	74
4.3	The Relative Merits: ODEs vs. IEs	76
	References	77
5	Models Involving One-Dimensional Diffusion	79
5.1	Derivation of the IEs	79
5.2	Diffusion in Semi-Infinite Spatial Domains	89
5.2.1	Concentration–Production Rate Relationships	90
5.2.2	Literature Examples	95
5.3	Diffusion in Finite Spatial Domains	99
5.3.1	Concentration–Production Rate Relationships	101
5.3.2	Literature Examples	112
5.4	Anomalous Diffusion	115
5.4.1	Concentration–Production Rate Relationship	115
5.4.2	Literature Examples	117
5.5	Benefits from Using the IE Method	117
	References	118
6	Models Involving One-Dimensional Convection-Diffusion	127
6.1	Derivation of the IEs	127
6.2	Concentration–Production Rate Relationships	128
6.2.1	Constant Convection Velocity	128
6.2.2	Dropping Mercury Electrode	130
6.2.3	Rotating Disk Electrode	132
6.2.4	Channel and Tubular Electrodes	135
6.3	Literature Examples	138
6.3.1	Expanding Plane	139
6.3.2	Rotating Disk Electrode	139
6.3.3	Tubular Electrodes	140
	References	140
7	Models Involving Two- and Three-Dimensional Diffusion	143
7.1	Derivation of the IEs	143
7.2	The Mirkin and Bard Approach	148
7.3	The Boundary Integral Method	151
7.4	Literature Examples	152
	References	153
8	Models Involving Transport Coupled with Homogeneous Reactions	157
8.1	Derivation of the IEs	157
8.2	A Single Reaction–Transport PDE, First-Order Homogeneous Reactions	161

8.3	Literature Examples, Transport Kernels Multiplied by $\exp[-k_j(t - \tau)]$	168
8.3.1	Planar Diffusion, Semi-Infinite Spatial Domain	168
8.3.2	Spherical Diffusion, Semi-Infinite Spatial Domain	172
8.3.3	Cylindrical Diffusion, Semi-Infinite Spatial Domain	173
8.3.4	Planar Diffusion, Finite Spatial Domain	173
8.3.5	Expanding Plane	174
8.3.6	Tubular Electrodes	176
8.3.7	Two- and Three-Dimensional Diffusion	177
8.4	Coupled Reaction–Planar Diffusion PDEs, First-Order Homogeneous Reactions	177
8.5	Transport with Nonlinear Homogeneous Reaction Kinetics	183
8.5.1	Equilibrium State Assumption	184
8.5.2	Steady State Assumption	185
8.5.3	The Gerischer Approximation	188
8.5.4	Conversion to IDEs	190
	References	192
9	Models Involving Distributed and Localised Species	199
9.1	Derivation of the IEs or IDEs	200
9.2	Literature Examples	215
9.2.1	One-Reaction Schemes	215
9.2.2	Two-Reaction Schemes	217
9.2.3	Three-Reaction Schemes	221
9.2.4	More Complicated Reaction Schemes	224
	References	226
10	Models Involving Additional Complications	233
10.1	Uncompensated Ohmic Drop and Double Layer Charging	233
10.1.1	Ohmic Drop Only	234
10.1.2	Double Layer Charging Only	235
10.1.3	General Case	237
10.1.4	Literature Examples	240
10.2	Electric Migration Effects	243
	References	244
11	Analytical Solution Methods	249
11.1	Analytical Methods for One-Dimensional IEs or IDEs	249
11.1.1	Integral Solutions	250
11.1.2	Power Series Solutions	256
11.1.3	Exponential Series Solutions	257
11.1.4	The Method of Successive Approximations	261
11.1.5	Application of Steady State Approximations	261
11.2	Analytical Methods for Two-Dimensional IEs	264
	References	264

12 Numerical Solution Methods	269
12.1 Numerical Methods for One-Dimensional Volterra IEs	269
12.1.1 The Step Function and the Huber Methods	273
12.1.2 The Adaptive Huber Method	284
12.1.3 Methods Based on Discrete Differintegration	294
12.1.4 Approximate (Degenerate) Kernel Method	296
12.1.5 The Analog Method	298
12.2 Numerical Methods for Multidimensional Volterra IEs	298
References	299
Appendices	305
A Solution–Flux Relationships for One-Dimensional Diffusion Equations	307
A.1 Planar Diffusion	308
A.1.1 Semi-infinite Spatial Domain	310
A.1.2 Finite Spatial Domain, Permeable Second Boundary	311
A.1.3 Finite Spatial Domain, Impermeable Second Boundary	313
A.2 Spherical Diffusion	315
A.2.1 Semi-infinite Spatial Domain	317
A.2.2 Finite Spatial Domain, Permeable Second Boundary	319
A.2.3 Finite Spatial Domain, Impermeable Second Boundary	322
A.3 Cylindrical Diffusion	324
A.3.1 Semi-infinite Spatial Domain	327
A.3.2 Finite Spatial Domain, Permeable Second Boundary	328
A.3.3 Finite Spatial Domain, Impermeable Second Boundary	331
References	333
B Solution–Flux Relationships for One-Dimensional Convection-Diffusion Equations	335
B.1 Constant Convection Velocity	335
B.2 Expanding Plane	339
B.3 Rotating Disk Electrode	340
B.4 Channel and Tubular Electrodes	346
References	349
C Solution–Flux Relationships for Multidimensional Diffusion Equations (Mirkin and Bard Approach)	351
C.1 Diffusion to Infinite Parallel Band(s) on a Plane	352
C.2 Diffusion to Disk/Ring(s) on a Plane	355
References	358

D	Solution–Flux Relationships for Multidimensional Diffusion Equations (the BIM)	359
	References	363
E	Solution–Flux Relationships for One-Dimensional Reaction-Diffusion Equations	365
E.1	A Single Transient Linear Reaction-Diffusion PDE.....	365
E.2	A Single Steady State Linear Reaction-Diffusion ODE	369
E.3	A System of Coupled Transient Linear Reaction-Diffusion PDEs	372
E.4	A Single Steady State Reaction-Diffusion ODE for Planar Diffusion and an m th-Order Reaction	378
	References	381
	Glossary	383
	List of Symbols	385
