1	Scientific Background	1
1.1	Star Formation	1
1.1.1	A Brief History	1
1.1.2	Formation of Low-Mass, Isolated Stars	2
1.1.3	Formation of High-Mass Stars in Clusters	3
1.1.4	Questions Raised	6
1.2	Targets and Observing Strategy	7
1.2.1	Infrared Point Sources	7
1.2.2	Infrared Dark Clouds	8
1.2.3	Radio Interferometer	11
1.3	Thesis Outline	13
	References	14
2	An Infrared Point Source Survey	19
2.1	Introduction	19
2.2	Sample	20
2.3	Observations with KOSMA	21
2.4	Results	22
2.4.1	Survey	22
2.4.2	Mapping	29
2.5	Discussion	32
2.5.1	The Line Width-Luminosity Relation	32
2.5.2	Core Masses and Line Widths	34
2.6	Individual Analyses	36
2.7	Conclusions	38
	References	38
3	The “Dragon” Nebula G28.34+0.06	43
3.1	Introduction	43
3.2	Observations	46

3.2.1	Submillimeter Array	46
3.2.2	Very Large Array	47
3.3	Results	48
3.3.1	Hierarchical Fragmentation	48
3.3.2	CO Outflows	54
3.3.3	Ammonia Emission	60
3.3.4	Maser Emission	62
3.4	Discussion	63
3.4.1	Massive Star Formation Through an Intermediate-Mass Stage	63
3.4.2	Feedbacks from Star Formation: Outflow and Radiation	65
3.4.3	Magnetic Fields and the Origin of the X-shaped Filamentary System	69
3.5	Conclusions	69
	References	70
4	The “Snake” Nebula G11.11–0.12	77
4.1	Introduction	77
4.1.1	Initial Fragmentation and Star Formation	77
4.1.2	Targets: Dense Clumps in IRDC G11.11–0.12	78
4.2	Observations	80
4.2.1	Submillimeter Array	80
4.2.2	Very Large Array	83
4.3	Results	83
4.3.1	Hierarchical Structure	83
4.3.2	H ₂ O and CH ₃ OH Masers	87
4.3.3	Protostellar Outflows	87
4.3.4	Chemical Differentiation	91
4.3.5	NH ₃ Emission and Temperature	93
4.4	Analysis and Discussion	97
4.4.1	Fragmentation Analysis	97
4.4.2	NH ₃ Ortho/Para Ratio	102
4.4.3	P1-SMA1: An Outflow/Disc System in a Proto-Binary?	104
4.4.4	Evolutionary Sequence	106
4.4.5	Condensation Mass Function	107
4.5	Conclusions	108
	References	109
5	The Infrared Dark Cloud G30.88+0.13	117
5.1	Introduction	117
5.2	Observations	119

5.2.1	Very Large Array	119
5.2.2	Green Bank 100 m Telescope	120
5.2.3	Submillimeter Array	120
5.3	Results	121
5.3.1	Dense Molecular Gas and Dust Continuum.	121
5.3.2	Two Cloud Components Along Line-of-Sight	124
5.3.3	H ₂ O Masers	126
5.4	Discussion	128
5.4.1	Association of Dust Peaks and H ₂ O Masers with the NH ₃ Gas	128
5.4.2	Nature of the C2 Clump: A Massive Protocluster in the Making	129
5.4.3	Nature of the C1 Clump: A Massive Precluster Clump?	131
5.4.4	Fragmentation and Massive Star Formation	132
5.5	Conclusions	133
	References	134
6	A New Evolutionary Picture	137
6.1	Thesis Summary	137
6.2	Evolutionary Sequence	138
6.3	A New Picture	140
6.4	Future: Importance of Filaments	141
	References	142

The Earliest Stages of Massive Clustered Star
Formation: Fragmentation of Infrared Dark Clouds

Wang, K.

2015, XX, 145 p. 37 illus., 23 illus. in color., Hardcover

ISBN: 978-3-662-44968-4
