1	Hydrogen Bonding Motifs: New Progresses	1
	Dan-Wei Zhang, Hui Wang and Zhan-Ting Li	
1.1	Hydrogen Bonding: The Basic Aspects	1
1.1.1	Definition.	1
1.1.2	Hydrogen Bonding Donors and Acceptors	2
1.1.3	The Strength of the Hydrogen Bond	3
1.1.4	Hydrogen Bonding Formed by a Single Functional Group	5
1.2	Intramolecular Hydrogen Bonding.	13
1.2.1	The O–H \cdots X Hydrogen Bonding	13
1.2.2	The N–H \cdots X Hydrogen Bonding	14
1.3	Intermolecular Hydrogen Bonding.	24
1.3.1	Double Hydrogen Bonding.	24
1.3.2	Triple Hydrogen Bonding.	25
1.3.3	Quadruple Hydrogen Bonding	27
1.4	Conclusion.	33
	References.	34
2	Understanding of Noncovalent Interactions Involving Organic Fluorine	37
	Piyush Panini and Deepak Chopra	
2.1	Introduction	37
2.1.1	Why Fluorine Is So Special?	39
2.2	Debate on Participation of Fluorine as a Hydrogen Bond Donor: Overview of the Weak X–H \cdots F–C; X = N, O, C Hydrogen Bond	40
2.3	Inputs from Other Interactions Involving Organic Fluorine.	53
2.3.1	Insight into Halogen–Halogen Interactions Involving Fluorine.	53

2.3.2	Insights into Halogen Bond Formation Involving Fluorine (C–F \cdots X; X = Halogen, N, O, S)	57
2.4	Conclusions	61
	References	62
3	Hydrogen Bonding in Supramolecular Crystal Engineering	69
	Lian-Cheng Wang and Qi-Yu Zheng	
3.1	Introduction	69
3.2	Crystal Engineering Strategies	71
3.2.1	Supramolecular Synthons and Retrosynthesis	71
3.2.2	Reticular Synthesis	72
3.3	Hydrogen Bonding	73
3.3.1	Definition and Scopes	73
3.3.2	Description of Hydrogen Bonding Motifs: The Graph Sets	74
3.3.3	Hydrogen Bonding Rules	75
3.4	Interpenetration	75
3.5	Hydrogen Bonding Structures	77
3.5.1	Discrete Hydrogen Bonding Capsules	77
3.5.2	1D Infinite Hydrogen Bonding Nanotubes	84
3.5.3	2D and 3D Borromean Arrayed Organic Crystals	90
3.5.4	2D \rightarrow 3D Parallel Polycatenated Structures	93
3.5.5	3D Interpenetrated dia and pcu Frameworks	95
3.5.6	Unusual Aggregation Phase of Water Molecules	96
3.6	Applications	99
3.6.1	Crystal Engineering of Solid State Photochemical Reactions	99
3.6.2	Gas Adsorption and Separation	103
3.6.3	Crystal Engineering of Pharmaceutical Cocrystals	105
	References	107
4	Hydrogen Bonding-Mediated Self-assembly of Aromatic Supramolecular Duplexes	115
	Yong Yang and Chuan-Feng Chen	
4.1	Introduction	115
4.2	Oligoamide-Based Molecular Duplex Strands	116
4.2.1	Oligoamide-Based Molecular Duplex Strands	116
4.2.2	Applications	118
4.3	Oligohydrazide-Based Molecular Duplex Strands	122
4.3.1	From Supramolecular Zipper to Quadruple Hydrogen-Bonded Heterodimer	123
4.3.2	Strict Self-complementary Oligohydrazide-Based Duplexes	124

4.3.3	Shuttle Movement	125
4.3.4	Mutual Responsive Low Molecular Mass Organic Gelators	127
4.3.5	Supramolecular Substitution	127
4.3.6	Amide-Urea-Based Molecular Duplexes	128
4.3.7	“Hao” Templated Molecular Duplex	131
4.4	“Covalent Casting” Strategy-Based Molecular Duplexes	131
4.5	Other Molecular Duplex Strands	133
4.6	Conclusions and Outlook	135
	References.	135
5	Hydrogen Bonding-Driven Anion Recognition	137
	Liping Cao, Jie Zhao, Dong Yang, Xiao-Juan Yang and Biao Wu	
5.1	Introduction	137
5.2	Amide-Based Anion Recognition	138
5.3	Urea-Based Anion Recognition	149
5.4	Pyrrole-Based Anion Recognition	164
5.5	CH Donor-Based Anion Recognition	175
5.6	OH-Based Anion Recognition	178
5.7	Conclusion.	181
	References.	181
