

Contents

1	Introduction	1
1.1	Liquid Explosives	1
1.2	Composition and Classification of Liquid Explosives	4
1.3	Raw Materials and Formulation of Liquid Explosives	4
1.3.1	Oxidizers	5
1.3.2	Combustible Agents	8
1.3.3	Additives	9
1.4	Applications of Liquid Explosives	10
1.4.1	Mining and Industrial Applications	10
1.4.2	Military Applications	13
	References	14
2	Explosion Features of Liquid Explosive Materials	17
2.1	Explosion Phenomena and Key Factors of Liquid Explosive Materials	17
2.1.1	Heat/Energy Releasing of Liquid Explosive Explosion	18
2.1.2	Rapid Reaction of Liquid Explosive Materials	19
2.1.3	Gas Products in Explosion of Liquid Explosives	20
2.2	The Explosion Changing of Liquid Explosive Materials	21
2.2.1	Combustion of Liquid Explosives	22
2.2.2	Detonation of Liquid Explosives	33
2.3	Explosion Work Ability of Liquid Explosives	48
2.3.1	Work Capacity of Liquid Explosives	48
2.3.2	Improving the Work Ability of Explosives	57
2.3.3	Brisance of Liquid Explosives	58
2.4	Explosion Impact of Liquid Explosives	65
2.4.1	Explosion Impact of Liquid Explosives in Free Space	65
2.4.2	Explosion of Liquid Explosives on the Ground	82
2.4.3	Explosion of Liquid Explosives in Semienclosed Space	88
2.4.4	Explosion Effect of Liquid Explosives Under Water	97

2.5	Toxic Gas Production of Liquid Explosives in Explosion	100
2.5.1	Toxicity of Liquid Explosives	100
2.5.2	Toxicity from Explosions of Liquid Explosives	100
2.5.3	Countermeasures to Reduce the Toxicity of Liquid Explosive	103
	References	103
3	Formulation Design of Liquid Explosives	105
3.1	Effect of Oxygen Balance on the Explosive Properties and Design Calculation of the Formulation	105
3.1.1	Design of Oxygen Balance	105
3.1.2	Influence of Oxygen Balance on Explosive Properties	108
3.1.3	Design and Calculation of Liquid Explosive Recipe	111
3.2	Design of Explosion Property	112
3.2.1	Design Calculation of Properties and Their Factor Relationship of Liquid Explosive	113
3.2.2	Explosion Formation Heat of Explosive	122
3.2.3	Design of Explosion Temperature of Explosive	127
3.2.4	Comprehensive Parametric Design of Liquid Explosives	134
3.3	Design on the Uniformity and Stability of Liquid Explosives	136
3.3.1	Solution-Type Liquid Explosives	136
3.3.2	Liquid Explosives with Small Solid Particles	137
	References	138
4	Liquid Nitro Explosives	139
4.1	Introduction	139
4.2	Properties of Liquid Nitro Explosives	140
4.2.1	Physical Properties of Liquid Nitro Compounds	140
4.2.2	Chemical Properties of Liquid Nitro Compounds	142
4.2.3	Explosion Properties of Liquid Nitro Compounds	147
4.3	Liquid Aliphatic Nitro Compounds	147
4.3.1	Properties and Preparation of Nitromethane	147
4.3.2	Properties and Preparation of Dinitromethane	154
4.3.3	Properties and Preparation of Trinitromethane	156
4.3.4	Properties and Preparation of Tetranitromethane	157
4.3.5	Properties of Nitroethane	159
4.3.6	Properties of 1,1-Dinitropropane	160
4.3.7	Properties of 1,3-Dinitropropane	161
4.3.8	Properties of 2-Methyl-2-Nitropropane	162
4.3.9	Properties of 1-Nitrobutane	162
4.4	Liquid Nitro Explosives with Heteroatoms	163
4.4.1	Properties of Fluorodinitromethane	163
4.4.2	Properties of Fluorotrinitromethane	164

4.5	Nitroalcohol	164
4.5.1	Properties and Preparation of 2,2-Dinitropropanol	165
4.5.2	Properties of 2-Nitroethanol	173
4.5.3	Properties of 2-Nitro-1-Propanol	174
4.5.4	Properties of 2-Methyl-2-Nitro-1-Propanol	174
4.6	Liquid Nitro Aromatic Compounds	175
4.6.1	Properties and Preparation of Nitrobenzene.	175
4.6.2	Properties of <i>o</i> -Nitrotoluene	176
4.6.3	Properties and Preparation of 3-Nitrotoluene.	177
	References	177
5	Preparation and Properties of Liquid Nitrate Ester	181
5.1	Characteristics of Nitrate Esters	181
5.1.1	Structure of Nitrate Esters	181
5.1.2	Physical Properties of Nitrate Esters	182
5.1.3	Hydrolysis of Nitrate Esters	187
5.1.4	Reduction of Nitrate Esters.	191
5.1.5	Other Reactions of Nitrate Esters.	192
5.1.6	Chemical Stability of Nitrate Esters	192
5.2	Properties and Preparation of Monohydric Alcohol Nitrate	193
5.2.1	Properties and Preparation of Methyl Nitrate.	193
5.2.2	Property and Preparation of Ethyl Nitrate	199
5.2.3	Property and Preparation of <i>n</i> -Propyl Nitrate.	201
5.2.4	Property and Preparation of Isopropyl Nitrate	203
5.2.5	Property and Preparation of <i>n</i> -Butyl Nitrate	206
5.2.6	Property and Preparation of <i>n</i> -Amyl Nitrate	208
5.2.7	Property and Preparation of Chlorinated Glycerol Nitrate	209
5.2.8	Property and Preparation of Glycerol Nitrate.	210
5.2.9	Property and Preparation of Glycidyl Nitrate.	211
5.2.10	Property and Preparation of Dichloroglycerol Nitrate	211
5.3	Property and Preparation of Dibasic Alcohol Nitrates	212
5.3.1	Property and Preparation of Glycol Dinitrate.	212
5.3.2	Property and Preparation of Diethylene Glycol Dinitrate	216
5.3.3	Property and Preparation of Triethylene Glycol Dinitrate	221
5.3.4	Property and Preparation of Glycerine Dinitrate.	223
5.3.5	Other Dibasic Alcohol Nitrates	227
5.4	Property and Preparation of Trinitrate Esters	235
5.4.1	Property and Preparation of Nitroglycerine	235

5.4.2	Property and Preparation of Nitro Isobutyl Glycerine Trinitrate	251
5.4.3	Property and Preparation of Pentaerythritol Trinitrate	258
5.4.4	Property and Preparation 1,2,4-Butanetriol Trinitrate	260
5.5	Property and Preparation of Other Nitrate Esters	262
5.5.1	Property and Preparation <i>D</i> -Sorbitol Hexanitrate	262
5.5.2	Property and Preparation of Polyethenol Nitrate	263
5.5.3	Property and Preparation of Diglycerine Tetranitrate	263
	References	265
6	Azido Liquid Explosives	269
6.1	Properties and Application of Azido Liquid Compounds.	269
6.1.1	Properties of Azido Compounds	269
6.1.2	Application of Azido Compound Liquids	271
6.2	Properties and Preparation of Azidoalkane	277
6.2.1	Properties and Preparation of Azidomethane	277
6.2.2	Azidoethane	278
6.2.3	Diazidoethane	278
6.2.4	Azidopropane	279
6.2.5	Properties and Preparation of 1,3-Diazidopropane (DANG).	279
6.2.6	1,5-Diazido-3-Nitroazapentane	284
6.2.7	Triazidomethane	285
6.2.8	3,3-Bis(Azidomethyl)Oxetane	286
6.2.9	3-Azidomethyl-3-Methyloxetane	286
6.3	Azidoalcohol and Azidoester	287
6.3.1	2-Azidoethanol	287
6.3.2	Glycerol Triazidoacetate	287
6.3.3	Pentaerythritol Tetraakis	288
6.4	Azidonitrate Ester	288
6.4.1	Properties and Preparation of Pentaerythritol Diazido Dinitrate.	288
6.4.2	Properties and Preparation of 1,3-Diazido-2-Nitrooxypropane	291
	References	294
7	Liquid Explosive Mixtures	297
7.1	Nitro Liquid Explosive Mixtures	299
7.1.1	Nitromethane-Based Liquid Explosives	299
7.1.2	Tetranitromethane-Based Liquid Explosives	310
7.2	Nitrate-Based Liquid Explosives	311
7.2.1	Characteristics of Nitrate-Based Liquid Explosives	311
7.2.2	Detonation Velocity of Nitrate-Based Liquid Explosives	313

7.3	Nitrate Nitrogen Oxide Based Liquid Explosives	316
7.3.1	Nitric Acid Liquid Explosives.	316
7.3.2	Liquid Explosives Based on Nitrogen Dioxide	329
7.4	Hydrazine Liquid Explosives.	330
7.4.1	Hydrazine Liquid Explosives Contain Nitric Acid	330
7.4.2	Hydrazine Nitrate Liquid Explosives Containing Hydrazine Hydrate and Aliphatic Amine	335
7.5	Perchloric Acid Urea Liquid Explosive.	337
7.6	Liquid Explosives with Hydrogen Peroxide.	339
7.6.1	Properties of Hydrogen Peroxide Containing Liquid Explosives	339
7.6.2	Explosion Properties of H_2O_2 and Its Mixtures	341
7.6.3	Toxicity and Control Measure for H_2O_2 Liquid Explosives	343
	References	343

Liquid Explosives
