

# Contents

<b>1</b>	<b>Stochastic Optimization Methods</b>	<b>1</b>
1.1	Introduction	1
1.2	Deterministic Substitute Problems: Basic Formulation	3
1.2.1	Minimum or Bounded Expected Costs	4
1.2.2	Minimum or Bounded Maximum Costs (Worst Case)	6
1.3	Optimal Decision/Design Problems with Random Parameters	7
1.4	Deterministic Substitute Problems in Optimal Decision/Design	12
1.4.1	Expected Cost or Loss Functions	13
1.5	Basic Properties of Deterministic Substitute Problems	16
1.6	Approximations of Deterministic Substitute Problems in Optimal Design/Decision	18
1.6.1	Approximation of the Loss Function	18
1.6.2	Approximation of State (Performance) Functions	21
1.6.3	Taylor Expansion Methods	24
1.7	Approximation of Probabilities: Probability Inequalities	28
1.7.1	Bonferroni-Type Inequalities	28
1.7.2	Tschebyscheff-Type Inequalities	30
<b>2</b>	<b>Optimal Control Under Stochastic Uncertainty</b>	<b>37</b>
2.1	Stochastic Control Systems	37
2.1.1	Random Differential and Integral Equations	39
2.1.2	Objective Function	45
2.2	Control Laws	49
2.3	Convex Approximation by Inner Linearization	52
2.4	Computation of Directional Derivatives	57
2.5	Canonical (Hamiltonian) System of Differential Equations/Two-Point Boundary Value Problem	67
2.6	Stationary Controls	69
2.7	Canonical (Hamiltonian) System of Differential	71

2.8	Computation of Expectations by Means of Taylor Expansions .....	73
2.8.1	Complete Taylor Expansion .....	74
2.8.2	Inner or Partial Taylor Expansion .....	75
<b>3</b>	<b>Stochastic Optimal Open-Loop Feedback Control .....</b>	<b>79</b>
3.1	Dynamic Structural Systems Under Stochastic Uncertainty .....	79
3.1.1	Stochastic Optimal Structural Control: Active Control.....	79
3.1.2	Stochastic Optimal Design of Regulators .....	81
3.1.3	Robust (Optimal) Open-Loop Feedback Control .....	82
3.1.4	Stochastic Optimal Open-Loop Feedback Control .....	82
3.2	Expected Total Cost Function .....	84
3.3	Open-Loop Control Problem on the Remaining Time Interval $[t_b, t_f]$ .....	85
3.4	The Stochastic Hamiltonian of (3.7a–d) .....	85
3.4.1	Expected Hamiltonian (with Respect to the Time Interval $[t_b, t_f]$ and Information $\mathfrak{A}_{t_b}$ ) .....	86
3.4.2	$H$ -Minimal Control on $[t_b, t_f]$ .....	86
3.5	Canonical (Hamiltonian) System .....	87
3.6	Minimum Energy Control .....	88
3.6.1	Endpoint Control .....	89
3.6.2	Endpoint Control with Different Cost Functions .....	93
3.6.3	Weighted Quadratic Terminal Costs .....	95
3.7	Nonzero Costs for Displacements .....	98
3.7.1	Quadratic Control and Terminal Costs .....	100
3.8	Stochastic Weight Matrix $Q = Q(t, \omega)$ .....	103
3.9	Uniformly Bounded Sets of Controls $D_t, t_0 \leq t \leq t_f$ .....	107
3.10	Approximate Solution of the Two-Point Boundary Value Problem (BVP) .....	112
3.11	Example .....	115
<b>4</b>	<b>Adaptive Optimal Stochastic Trajectory Planning and Control (AOSTPC) .....</b>	<b>119</b>
4.1	Introduction .....	119
4.2	Optimal Trajectory Planning for Robots.....	121
4.3	Problem Transformation.....	124
4.3.1	Transformation of the Dynamic Equation.....	126
4.3.2	Transformation of the Control Constraints .....	127
4.3.3	Transformation of the State Constraints .....	128
4.3.4	Transformation of the Objective Function .....	129
4.4	OSTP: Optimal Stochastic Trajectory Planning .....	129
4.4.1	Computational Aspects .....	137
4.4.2	Optimal Reference Trajectory, Optimal Feedforward Control .....	141

4.5	AOSTP: Adaptive Optimal Stochastic Trajectory Planning .....	142
4.5.1	(OSTP)-Transformation .....	146
4.5.2	The Reference Variational Problem .....	148
4.5.3	Numerical Solutions of (OSTP) in Real-Time .....	150
4.6	Online Control Corrections: PD-Controller .....	157
4.6.1	Basic Properties of the Embedding $q(t, \epsilon)$ .....	158
4.6.2	The 1st Order Differential $dq$ .....	161
4.6.3	The 2nd Order Differential $d^2q$ .....	168
4.6.4	Third and Higher Order Differentials .....	172
4.7	Online Control Corrections: PID Controllers .....	173
4.7.1	Basic Properties of the Embedding $q(t, \epsilon)$ .....	176
4.7.2	Taylor Expansion with Respect to $\epsilon$ .....	177
4.7.3	The 1st Order Differential $dq$ .....	178
<b>5</b>	<b>Optimal Design of Regulators .....</b>	<b>195</b>
5.1	Tracking Error .....	197
5.1.1	Optimal PD-Regulator .....	198
5.2	Parametric Regulator Models .....	200
5.2.1	Linear Regulator .....	200
5.2.2	Explicit Representation of Polynomial Regulators .....	201
5.2.3	Remarks to the Linear Regulator .....	202
5.3	Computation of the Expected Total Costs of the Optimal Regulator Design .....	203
5.3.1	Computation of Conditional Expectations by Taylor Expansion .....	204
5.3.2	Quadratic Cost Functions .....	206
5.4	Approximation of the Stochastic Regulator Optimization Problem .....	207
5.4.1	Approximation of the Expected Costs: Expansions of 1st Order .....	209
5.5	Computation of the Derivatives of the Tracking Error .....	216
5.5.1	Derivatives with Respect to Dynamic Parameters at Stage $j$ .....	217
5.5.2	Derivatives with Respect to the Initial Values at Stage $j$ .....	221
5.5.3	Solution of the Perturbation Equation .....	224
5.6	Computation of the Objective Function .....	230
5.7	Optimal PID-Regulator .....	233
5.7.1	Quadratic Cost Functions .....	235
5.7.2	The Approximate Regulator Optimization Problem .....	250
<b>6</b>	<b>Expected Total Cost Minimum Design of Plane Frames .....</b>	<b>253</b>
6.1	Introduction .....	253
6.2	Stochastic Linear Programming Techniques .....	254
6.2.1	Limit (Collapse) Load Analysis of Structures as a Linear Programming Problem .....	254
6.2.2	Plane Frames .....	257

6.2.3	Yield Condition in Case of $M-N$ -Interaction .....	263
6.2.4	Approximation of the Yield Condition by Using Reference Capacities .....	270
6.2.5	Asymmetric Yield Stresses .....	273
6.2.6	Violation of the Yield Condition .....	279
6.2.7	Cost Function .....	280
<b>7</b>	<b>Stochastic Structural Optimization with Quadratic Loss Functions</b> ...	289
7.1	Introduction .....	289
7.2	State and Cost Functions .....	292
7.2.1	Cost Functions .....	296
7.3	Minimum Expected Quadratic Costs .....	299
7.4	Deterministic Substitute Problems .....	304
7.4.1	Weight (Volume)-Minimization Subject to Expected Cost Constraints .....	304
7.4.2	Minimum Expected Total Costs .....	306
7.5	Stochastic Nonlinear Programming .....	308
7.5.1	Symmetric, Non Uniform Yield Stresses .....	311
7.5.2	Non Symmetric Yield Stresses .....	312
7.6	Reliability Analysis .....	315
7.7	Numerical Example: 12-Bar Truss .....	318
7.7.1	Numerical Results: MEC .....	320
7.7.2	Numerical Results: ECBO .....	322
<b>8</b>	<b>Maximum Entropy Techniques</b> .....	323
8.1	Uncertainty Functions Based on Decision Problems .....	323
8.1.1	Optimal Decisions Based on the Two-Stage Hypothesis Finding (Estimation) and Decision Making Procedure .....	323
8.1.2	Stability/Instability Properties .....	328
8.2	The Generalized Inaccuracy Function $H(\lambda, \beta)$ .....	331
8.2.1	Special Loss Sets $V$ .....	334
8.2.2	Representation of $H_\epsilon(\lambda, \beta)$ and $H(\lambda, \beta)$ by Means of Lagrange Duality .....	342
8.3	Generalized Divergence and Generalized Minimum Discrimination Information .....	346
8.3.1	Generalized Divergence .....	346
8.3.2	$I$ -, $J$ -Projections .....	352
8.3.3	Minimum Discrimination Information .....	353
	<b>References</b> .....	357
	<b>Index</b> .....	365

Stochastic Optimization Methods

Applications in Engineering and Operations Research

Marti, K.

2015, XXIV, 368 p. 23 illus., Hardcover

ISBN: 978-3-662-46213-3
