

Contents

1	Introduction	1
2	Linear Partial Differential Equations	13
2.1	Classification of Second-Order Partial Differential Equations	13
2.2	Character of the Solutions for the Partial Differential Equations	21
2.2.1	Parabolic Second-Order Equations	21
2.2.2	Elliptic Second-Order Equations	23
2.2.3	Hyperbolic Second-Order Equations	24
2.3	Separation of Variables	25
2.3.1	One-Dimensional Transient Heat Conduction in a Slab	26
2.3.2	Steady-State Heat Conduction in a Rectangular Plate	33
2.3.3	Separation of Variables for the General Case of a Linear Second-Order Partial Differential Equation	39
3	Heat Transfer in Pipe and Channel Flows (Parabolic Problems)	47
3.1	Heat Transfer in Pipe and Channel Flows with Constant Wall Temperature	47
3.1.1	Velocity Distribution of Hydrodynamically Fully Developed Pipe and Channel Flows	48
3.1.2	Thermal Entrance Solutions for Constant Wall Temperature	50
3.2	Thermal Entrance Solutions for an Arbitrary Wall Temperature Distribution	70
3.3	Flow and Heat Transfer in Axially Rotating Pipes with Constant Wall Heat Flux	73
3.3.1	Velocity Distribution for the Hydrodynamically Fully Developed Flow in an Axial Rotating Pipe	75
3.3.2	Thermal Entrance Solution for Constant Wall Heat Flux	78

4 Analytical Solutions for Sturm-Liouville Systems with Large Eigenvalues	91
4.1 Heat Transfer in Turbulent Pipe Flow with Constant Wall Temperature	107
4.2 Heat Transfer in an Axially Rotating Pipe with Constant Wall Temperature	112
4.3 Asymptotic Expressions for Other Thermal Boundary Conditions	116
5 Heat Transfer in Duct Flows for Small Peclet Numbers (Elliptic Problems)	121
5.1 Heat Transfer for Constant Wall Temperatures for $x \leq 0$ and $x > 0$	124
5.1.1 Heat Transfer in Laminar Pipe and Channel Flows for Small Peclet Numbers	135
5.1.2 Heat Transfer in Turbulent Pipe and Channel Flows for Small Peclet Numbers	145
5.2 Heat Transfer for Constant Wall Heat Flux for $x \leq 0$ and $x > 0$	149
5.2.1 Heat Transfer in Laminar Pipe and Channel Flows for Small Peclet Numbers	154
5.2.2 Heat Transfer in Turbulent Pipe and Channel Flows for Small Peclet Numbers	158
5.3 Results for Heating Sections with a Finite Length	160
5.3.1 Piecewise Constant Wall Temperature	161
5.3.2 Piecewise Constant Wall Heat Flux	164
5.4 Application of the Solution Method to Related Problems	167
6 Nonlinear Partial Differential Equations	173
6.1 The Method of Separation of Variables	174
6.2 Transformations Resulting in Linear Partial Differential Equations	180
6.3 Functional Relations Between Dependent Variables	186
6.3.1 Incompressible Flow over a Heated Flat Plate	186
6.3.2 Compressible Flow over a Flat, Heated Plate	189
6.4 Similarity Solutions	191
6.4.1 Similarity Solutions for a Transient Heat Conduction Problem	191
6.4.2 Similarity Solutions of the Boundary Layer Equations for Laminar Free Convection Flow on a Vertical Flat Plate	198
6.4.3 Similarity Solutions of the Compressible Boundary Layer Equations	204

Appendix A: The Fully Developed Velocity Profile for Turbulent Duct Flows	217
Appendix B: The Fully Developed Velocity Profile in an Axially Rotating Pipe	229
Appendix C: A Numerical Solution Method for Eigenvalue Problems	241
Appendix D: Detailed Derivation of Certain Properties of the Method for Solving the Extended Graetz Problems.	249
Appendix E: Short Solutions of the Chapter Problems	263
