

Contents

1	Overview	1
1.1	Integrability and Yang-Baxter Equation	2
1.2	Integrable Boundary Conditions	5
1.3	Basic Ingredients of the Coordinate Bethe Ansatz	8
1.4	$T - Q$ Relation	10
1.5	Basic Ingredients of the Off-Diagonal Bethe Ansatz	11
1.5.1	Functional Relations of the XXX Spin- $\frac{1}{2}$ Chain	12
1.5.2	Two Theorems on the Complete-Spectrum Characterization	14
1.5.3	Inhomogeneous $T - Q$ Relation	15
	References	19
2	The Algebraic Bethe Ansatz	23
2.1	The Periodic Heisenberg Spin Chain	23
2.1.1	The Algebraic Bethe Ansatz	23
2.1.2	Selection Rules of the Bethe Roots	28
2.1.3	Ground State	29
2.1.4	Spinon Excitations	31
2.1.5	String Solutions	32
2.1.6	Thermodynamics	35
2.2	The Open Heisenberg Spin Chain	40
2.2.1	The Algebraic Bethe Ansatz	40
2.2.2	Surface Energy and Boundary Bound States	49
2.3	Nested Algebraic Bethe Ansatz for $SU(n)$ -Invariant Spin Chain	51
2.4	Quantum Determinant, Projectors and Fusion	56
2.5	Sklyanin's Separation of Variables	59
2.5.1	SoV Basis	59
2.5.2	Functional Relations	61
2.5.3	Operator Decompositions	62
	References	63

3	The Periodic Anisotropic Spin-$\frac{1}{2}$ Chains	67
3.1	The XXZ Model	68
3.1.1	The Hamiltonian	68
3.1.2	Operator Product Identities of the Transfer Matrix	69
3.1.3	$\Lambda(u)$ as a Trigonometric Polynomial	70
3.1.4	Functional $T - Q$ Relation and Bethe Ansatz Equations	72
3.1.5	Ground States and Elementary Excitations	73
3.2	The XYZ Model	76
3.2.1	The Hamiltonian	76
3.2.2	Operator Product Identities	78
3.2.3	The Inhomogeneous $T - Q$ Relation	79
3.2.4	Even N Case	81
3.2.5	Odd N Case	82
3.2.6	An Alternative Inhomogeneous $T - Q$ Relation	84
	References	89
4	The Spin-$\frac{1}{2}$ Torus	93
4.1	Z_2 -symmetry and the Model Hamiltonian	93
4.2	Operator Product Identities	95
4.3	The Inhomogeneous $T - Q$ Relation	96
4.4	An Alternative Inhomogeneous $T - Q$ Relation	99
4.5	The Scalar Product $F_n(\theta_1, \dots, \theta_n)$	102
4.6	Retrieving the Eigenstates	104
4.6.1	SoV Basis of the Hilbert Space	105
4.6.2	Bethe States	107
4.6.3	Another Basis	111
4.7	Physical Properties for $\eta = \frac{i\pi}{2}$	112
4.8	The XYZ Spin Torus	114
	References	118
5	The Spin-$\frac{1}{2}$ Chains with Arbitrary Boundary Fields	121
5.1	Spectrum of the Open XXX Spin- $\frac{1}{2}$ Chain	122
5.1.1	The Model Hamiltonian	122
5.1.2	Crossing Symmetry of the Transfer Matrix	123
5.1.3	Operator Product Identities	124
5.1.4	The Inhomogeneous $T - Q$ Relation	126
5.1.5	An Alternative Inhomogeneous $T - Q$ Relation	129
5.2	Bethe States of the Open XXX Spin- $\frac{1}{2}$ Chain	131
5.2.1	Gauge Transformation of the Monodromy Matrices	131
5.2.2	SoV Basis	135
5.2.3	The Scalar Product $F_n(\theta_{p_1}, \dots, \theta_{p_n})$	137
5.2.4	The Inner Product $\langle 0 \theta_{p_1}, \dots, \theta_{p_n} \rangle$	139
5.2.5	Bethe States	140

5.3	Spectrum of the Open XXZ Spin- $\frac{1}{2}$ Chain	141
5.3.1	The Model Hamiltonian	141
5.3.2	Functional Relations	142
5.3.3	The Inhomogeneous $T - Q$ Relation	143
5.3.4	An Alternative Inhomogeneous $T - Q$ Relation	149
5.4	Thermodynamic Limit and Surface Energy.	150
5.4.1	Reduced BAEs for Imaginary η	150
5.4.2	Surface Energy in the Critical Phase	152
5.4.3	Finite-Size Corrections.	157
5.4.4	Surface Energy in the Gapped Phase	158
5.5	Bethe States of the Open XXZ Spin Chain	163
5.5.1	Local Gauge Matrices	163
5.5.2	Commutation Relations	166
5.5.3	Right SoV Basis	170
5.5.4	Left SoV Basis	173
5.5.5	The Scalar Product $\langle \theta_{p_1}, \dots, \theta_{p_n}; m_0 \Psi \rangle$	176
5.5.6	The Inner Product $\langle \theta_{p_1}, \dots, \theta_{p_n}; m_0 \bar{m}_0 \rangle$	178
5.5.7	Bethe States	180
5.5.8	Degenerate Case	182
5.6	The Open XYZ Spin- $\frac{1}{2}$ Chain	187
5.6.1	The Model Hamiltonian	187
5.6.2	Operator Product Identities	189
5.6.3	The Inhomogeneous $T - Q$ Relation	192
	References.	195
6	The One-Dimensional Hubbard Model.	197
6.1	The Periodic Hubbard Model	198
6.1.1	Coordinate Bethe Ansatz	198
6.1.2	Solution of the Second Eigenvalue Problem	201
6.1.3	Ground State Energy and Mott Gap at Half Filling	202
6.2	Hubbard Model with Open Boundaries	205
6.2.1	Coordinate Bethe Ansatz	205
6.2.2	Off-Diagonal Bethe Ansatz.	208
6.3	The Super-symmetric $t - J$ Model with Non-diagonal Boundaries.	211
6.3.1	Coordinate Bethe Ansatz	211
6.3.2	Off-Diagonal Bethe Ansatz.	214
	References.	215
7	The Nested Off-Diagonal Bethe Ansatz	219
7.1	The Fusion Procedure	219
7.1.1	Fundamental Fusion Relations	219
7.1.2	The Quantum Determinant	223

7.2	The Periodic $SU(n)$ Spin Chain	224
7.2.1	Operator Product Identities	224
7.2.2	Nested $T - Q$ Relation	226
7.3	Fundamental Relations of the Open $SU(n)$ Spin Chain	228
7.3.1	The Model Hamiltonian	228
7.3.2	The Fusion Procedure	229
7.3.3	Operator Product Identities and Functional Relations	233
7.3.4	Asymptotic Behavior of the Transfer Matrices	236
7.4	Solution of the $SU(3)$ Case	237
7.4.1	Functional Relations	237
7.4.2	The Nested Inhomogeneous $T - Q$ Relation	239
7.5	Solution of the $SU(4)$ Case	241
7.6	Solution of the $SU(n)$ Case	247
	References.	249
8	The Hierarchical Off-Diagonal Bethe Ansatz	251
8.1	The Fusion Procedure	252
8.1.1	Fusion of the R -Matrices and the K -Matrices	252
8.1.2	Fused Transfer Matrices.	255
8.2	Operator Identities	256
8.3	The Inhomogeneous $T - Q$ Relation	260
8.4	Completeness of the Solutions	264
8.5	The Nonlinear Schrödinger Model	268
8.5.1	The Model Correspondence	268
8.5.2	Operator Identities.	270
8.5.3	$T - Q$ Relation.	272
	References.	273
9	The Izergin-Korepin Model.	277
9.1	The Model with Generic Open Boundaries.	277
9.2	Operator Product Identities.	281
9.3	Crossing Symmetry and Asymptotic Behavior	284
9.4	The Inhomogeneous $T - Q$ Relation	286
9.5	Reduced $T - Q$ Relation for Constrained Boundaries	290
9.6	Periodic Boundary Case.	292
	References.	293

Off-Diagonal Bethe Ansatz for Exactly Solvable Models

Wang, Y.; Yang, W.-L.; Cao, J.; Shi, K.

2015, XIV, 296 p. 9 illus., 3 illus. in color., Hardcover

ISBN: 978-3-662-46755-8
