

Contents

1	Introduction	1
1.1	The Structure and Basic Properties of Graphene	1
1.1.1	The Structure of Graphene	1
1.1.2	The Basic Properties of Graphene	3
1.2	Preparation of Graphene	4
1.2.1	Methods to Prepare Graphene	4
1.2.2	Preparation of One-Dimensional Graphene Structures	8
1.2.3	Preparation of Three-Dimensional Graphene Structure	9
1.2.4	Composite Materials of Graphene and Other Carbon Materials	11
1.3	Applications of Graphene	13
1.3.1	Application of Graphene in Solar Cells	14
1.3.2	Application of Graphene in Sensors	15
1.3.3	Application of Graphene in Supercapacitors	17
1.3.4	Other Applications	19
1.4	Introduction of Problem and Main Research Contents	20
1.4.1	Existing Research Problems	20
1.4.2	Main Research Contents and Method	21
	References	22
2	Synthesis, Separation, Transfer, and Structural Characterization of Graphene-Based Woven Fabric	27
2.1	Introduction	27
2.2	Synthesis Method and Characterization of GWF	28
2.2.1	Preparation Method	28
2.2.2	Characterization of Graphene	29
2.2.3	Main Detection Instruments	30
2.3	Preparation of GWF Using Copper Meshes as Templates and the Influence Factors	31
2.3.1	Preparation Technology	31
2.3.2	Influencing Factors	33

2.4	Separation and Transfer of GWF	36
2.4.1	Solution Etching Directly	36
2.4.2	Transfer with the Protection of PDMS	38
2.5	Structural Characterizations of GWF.	41
2.5.1	Morphology Characterization.	41
2.5.2	Microstructure	42
2.6	Preparation and Structural Characterization of GWF/Amorphous Composite Using Nickel Mesh as Substrate . . .	46
2.6.1	Preparation, Separation, and Transfer Process	46
2.6.2	Structural Characteristics.	49
2.6.3	Stability Test.	52
2.7	Conclusion	54
	References	54
3	GWF/Silicon Solar Cells	55
3.1	Introduction.	55
3.2	Transmittance and Conductivity of GWF.	56
3.3	Assembly and Performance of GWF/Silicon Solar Cells	58
3.3.1	The Model, Assembly and Testing of Solar Cells.	58
3.3.2	Photo-voltage Characteristics and Stability of the Solar Cell	60
3.3.3	Effects of the GWF on Solar Cells.	63
3.4	Effect of PEDOT Filling on the Performance of GWF/Silicon Solar Cells	65
3.4.1	Cell Model Filled by Solid Materials	65
3.4.2	Effect of PEDOT Filling on the Performance of Solar Cell	67
3.5	Effect of HBr/Br ₂ Filling on the Performance of GWF/Silicon Solar Cells	69
3.5.1	Model and Assembly of Solar Cell Filled by Liquid Materials	69
3.5.2	Effect of the HBr/Br ₂ Filling on the Cell Performance . . .	70
3.6	Enhanced Effect of Nitric Acid Vapor on the Performance of the GWF/Silicon Solar Cell	71
3.7	Effects of the Three Treatment Methods on Solar Cells.	73
3.7.1	Comparison of the Band Structure of Solar Cells.	73
3.7.2	Comparison of the Performance of Solar Cells.	74
3.8	Summary	75
4	Strain Sensors of Graphene Woven Fabrics.	77
4.1	Introduction.	77
4.2	The Strength of GWF.	78

4.3	Assembly and Mechanism of the GWF Strain Sensors	80
4.3.1	Assembly of the Strain Sensors	80
4.3.2	Mechanism of the Strain Sensors	81
4.4	Tensile Strain Sensing Property of the Sensor	83
4.4.1	Tensile Strain Sensing Property of the Sensor	83
4.4.2	Stability of the Sensor	88
4.4.3	Application of the Sensors	90
4.5	Simulation Calculation of the Tensile Strain Sensors.	92
4.6	Compression, Shear, and Torsion Sensing Performance of GWF-on-PDMS Strain Sensors	95
4.6.1	Compressive Strain Sensing Performance of Sensors	95
4.6.2	Sensing Properties of the Sensors with Shear and Torsional Strain	95
4.7	Conclusion	97
	References	98
5	GWF/Amorphous Carbon Composites Supercapacitor	99
5.1	Introduction	99
5.2	Porous Feature of GWF/Amorphous Carbon Composites.	100
5.2.1	Changing Process of the Porous Structure	100
5.2.2	Characterization of the Porous Structure	102
5.3	Assembly and Testing of GWF/Amorphous Carbon Composites Supercapacitor.	104
5.3.1	Assembly of the Capacitor	104
5.3.2	Testing of the Capacitive Performance	105
5.4	The Impact of KOH Treatment on GWF/Amorphous Carbon Supercapacitor	107
5.5	The Impact of Nitrogen Doping on GWF/Amorphous Carbon Supercapacitor	109
5.5.1	The Process and Characterization of Nitrogen Doping . . .	109
5.5.2	The Impact of Nitrogen Doping on the Capacitor.	111
5.6	The Impact of the Nickel Wire Diameter on GWF/Amorphous Carbon Supercapacitor	112
5.6.1	The Impact of the Nickel Wire Diameter on the Capacitor	112
5.6.2	The Test and Comparison of the Integrated Performance of the Capacitors	114
5.7	The Impact of Filling MnO ₂ on the GWF/Amorphous Carbon Supercapacitor	118
5.8	Conclusion	120
	References	121

6 Conclusion 123

6.1 Main Conclusion 123

6.2 Main Innovations 124

6.3 Outlook and Suggestions. 125

Synthesis, Properties and Application of Graphene
Woven Fabrics

Li, X.

2015, XII, 125 p. 103 illus., 77 illus. in color., Hardcover
