Part I Background Materials

1	Overview	3
1.1	Introduction	3
1.2	Product and Product Life Cycle	3
1.2.1	Product	3
1.2.2	Product Life Cycle	4
1.2.3	Technology Life Cycle of a Product	4
1.3	Notions of Reliability and Quality	5
1.3.1	Product Reliability	5
1.3.2	Product Quality	6
1.3.3	Link Between Quality and Reliability	7
1.4	Objective, Scope, and Focus of this Book	8
1.5	Outline of the Book	8
	References	9
2	Engineering Activities in Product Life Cycle	11
2.1	Introduction	11
2.2	Engineering Activities in Pre-manufacturing Phase	11
2.2.1	Main Activities in Front-End Stage	11
2.2.2	Main Activities in Design and Development Stage	12
2.3	Engineering Activities in Production Phase	15
2.3.1	Types of Production Systems	15
2.3.2	Production System Design	16
2.3.3	Quality Control System Design	19
2.3.4	Production Management	22

2.4	Engineering Activities in Post-manufacturing Phase.	22
2.4.1	Main Activities in Marketing Stage.	22
2.4.2	Main Activities in Post-sale Support Stage.	22
2.4.3	Recycle, Refurbishing, and Remanufacturing	23
2.5	Approach for Solving Quality and Reliability Problems.	24
	References.	24
3	Fundamental of Reliability	27
3.1	Introduction	27
3.2	Concepts of Reliability and Failure	27
3.2.1	Reliability	27
3.2.2	Failure.	28
3.2.3	Failure Mode and Cause	29
3.2.4	Failure Mechanism	29
3.2.5	Failure Severity and Consequences	30
3.2.6	Modeling Failures.	30
3.3	Reliability Basic Functions.	31
3.3.1	Probability Density Function	31
3.3.2	Cumulative Distribution and Reliability Functions.	32
3.3.3	Conditional Distribution and Residual Life.	33
3.3.4	Failure Rate and Cumulative Hazard Functions.	34
3.3.5	Relations Between Reliability Basic Functions	35
3.4	Component Bathtub Curve and Hockey-Stick Line	36
3.5	Life Characteristics	37
3.5.1	Measures of Lifetime	37
3.5.2	Dispersion of Lifetime.	40
3.5.3	Skewness and Kurtosis of Life Distribution	41
3.6	Reliability of Repairable Systems	41
3.6.1	Failure-Repair Process.	41
3.6.2	Reliability Measures	43
3.6.3	Failure Point Process.	44
3.7	Evolution of Reliability Over Product Life Cycle	46
3.7.1	Design Reliability	46
3.7.2	Inherent Reliability	47
3.7.3	Reliability at Sale	47
3.7.4	Field Reliability	47
3.7.5	Values of Weibull Shape Parameter Associated with Different Reliability Notions	48
	References.	48

4	Distribution Models	51
4.1	Introduction	51
4.2	Discrete Distributions	51
4.2.1	Basic Functions of a Discrete Distribution	51
4.2.2	Single-Parameter Models	52
4.2.3	Two-Parameter Models	53
4.2.4	Hypergeometric Distribution	56
4.3	Simple Continuous Distributions	57
4.3.1	Weibull Distribution	57
4.3.2	Gamma Distribution	58
4.3.3	Lognormal Distribution	59
4.4	Complex Distribution Models Involving Multiple Simple Distributions	59
4.4.1	Mixture Model	59
4.4.2	Competing Risk Model	60
4.4.3	Multiplicative Model	61
4.4.4	Sectional Models	62
4.5	Delay Time Model	64
	References	66
5	Statistical Methods for Lifetime Data Analysis	67
5.1	Introduction	67
5.2	Reliability Data	67
5.2.1	Sources and Types of Data	67
5.2.2	Life Data	68
5.2.3	Performance Degradation Data	72
5.2.4	Data on Use Condition and Environment	72
5.3	Nonparametric Estimation Methods for Cdf	73
5.3.1	Complete Data Case	73
5.3.2	Grouped Data Case	73
5.3.3	Alternately Censored Data Case	74
5.4	Parameter Estimation Methods	79
5.4.1	Graphical Method	79
5.4.2	Method of Moments	80
5.4.3	Maximum Likelihood Method	81
5.4.4	Least Square Method	83
5.4.5	Expectation-Maximum Method	83
5.5	Hypothesis Testing	84
5.5.1	Chi Square Test	84
5.5.2	Kolmogorov-Smirnov Test	85
5.6	Model Selection	85
5.6.1	Likelihood Ratio Test	86
5.6.2	Information Criterion	87
	References	87

6	Reliability Modeling of Repairable Systems	89
6.1	Introduction	89
6.2	Failure Counting Process Models	90
6.2.1	Renewal Process	90
6.2.2	Homogeneous Poisson Process	91
6.2.3	Nonhomogeneous Poisson Process	91
6.2.4	Empirical Mean Cumulative Function	92
6.3	Distribution Models for Modeling Failure Processes	93
6.3.1	Ordinary Life Distribution Models	93
6.3.2	Imperfect Maintenance Models	94
6.3.3	Variable-Parameter Distribution Models	94
6.4	A Procedure for Modeling Failure Processes	94
6.4.1	An Illustration	94
6.4.2	Modeling Procedure	95
6.5	Tests for Stationarity	96
6.5.1	Graphical Methods	97
6.5.2	Tests with HPP Null Hypothesis	97
6.5.3	Tests with RP Null Hypothesis	100
6.5.4	Performances of Trend Tests	101
6.6	Tests for Randomness	102
6.6.1	Runs Above and Below Median Test	102
6.6.2	Sign Test	104
6.6.3	Runs Up and Down	104
6.6.4	Mann–Kendall Test	105
6.6.5	Spearman Test	105
6.6.6	Discussion	106
6.7	Tests for Normality and Constant Variance	106
6.7.1	Tests for Normality	107
6.7.2	Tests for Constant Variance	108
	References	108

Part II Product Quality and Reliability in Pre-manufacturing Phase

7	Product Design and Design for X	113
7.1	Introduction	113
7.2	Product Design and Relevant Issues	113
7.2.1	Product Design	113
7.2.2	Key Issues	114
7.2.3	Time-Based Product Design	114
7.2.4	Design for Life Cycle	115
7.2.5	Design for X	115

7.3	Design for Several Overall Performances	116
7.3.1	Design for Safety	116
7.3.2	Design for Environment.	119
7.3.3	Design for Quality	119
7.3.4	Design for Reliability	120
7.3.5	Design for Testability	120
7.4	Design for Production-Related Performances	121
7.4.1	Design for Manufacturability	121
7.4.2	Design for Assemblability.	121
7.4.3	Design for Logistics	122
7.5	Design for Use-Related Performances	123
7.5.1	Design for Serviceability	123
7.5.2	Design for Maintainability	124
7.5.3	Design for Supportability	125
7.6	Design for Retirement-Related Performances	125
7.6.1	Design for Recyclability	125
7.6.2	Design for Disassemblability	126
	References.	126
8	Design Techniques for Quality.	129
8.1	Introduction	129
8.2	House of Quality and Quality Function Deployment	129
8.2.1	House of Quality	129
8.2.2	Priorities of Engineering Characteristics.	131
8.2.3	Satisfaction Degrees of Customer Attributes.	132
8.2.4	Quality Function Deployment.	133
8.3	Cost of Quality and Loss Function	134
8.3.1	Quality Costs	134
8.3.2	Loss Function.	134
8.3.3	Applications of Quality Loss Function.	136
8.4	Experimental Optimum Method	137
8.4.1	Basic Idea	137
8.4.2	Specific Procedure	137
8.4.3	Design of Experiments	138
8.4.4	Data Analysis.	140
8.5	Model-Based Optimum Method	143
8.5.1	Constraint Conditions	144
8.5.2	Objective Function	144
	References.	146
9	Design Techniques for Reliability	147
9.1	Introduction	147
9.2	Process of Design for Reliability.	147
9.3	Reliability Requirements	148

9.4	Reliability Analysis	149
9.4.1	Change Point Analysis	149
9.4.2	FMEA	149
9.4.3	System Reliability Analysis	150
9.5	Reliability Prediction	154
9.5.1	Empirical Methods	154
9.5.2	Physics of Failure Analysis Method	155
9.5.3	Life Testing Method	157
9.5.4	Simulation Method	157
9.6	Reliability Allocation	158
9.6.1	Reliability Allocation Methods for Nonrepairable Systems	158
9.6.2	Reliability Allocation Methods for Repairable Systems	160
9.7	Techniques to Achieve Desired Reliability	162
9.7.1	Component Deration and Selection	162
9.7.2	Redundancy	165
9.7.3	Preventive Maintenance	165
9.7.4	Reliability Growth Through Development	166
9.8	Reliability Control and Monitoring	166
9.8.1	Reliability Control in Manufacturing Process	166
9.8.2	Reliability Monitoring in Usage Phase	167
	References	167
10	Reliability Testing and Data Analysis	169
10.1	Introduction	169
10.2	Product Reliability Tests in Product Life Cycle	169
10.2.1	Reliability Tests Carried Out During Product Development Stage	169
10.2.2	Reliability Tests Carried Out During Product Manufacturing Phase	170
10.2.3	Reliability Tests Carried Out During Product Usage Phase	171
10.3	Accelerated Testing and Loading Schemes	171
10.3.1	Accelerated Life Testing	171
10.3.2	Accelerated Degradation Testing	172
10.3.3	Loading Schemes	172
10.4	Accelerated Life Testing Data Analysis Models	174
10.4.1	Life Distribution Models	174
10.4.2	Stress-Life Relationship Models	176
10.4.3	Inverse Power-Law Model	177
10.4.4	Proportional Hazard Model	177
10.4.5	Generalized Proportional Model	179
10.4.6	Discussion	179

10.5	Accelerated Degradation Testing Models	181
10.5.1	Physical-Principle-Based Models.	182
10.5.2	Data-Driven Models	182
10.5.3	Discussion	184
10.5.4	A Case Study	184
10.6	Design of Accelerated Stress Testing.	187
10.6.1	Design Variables and Relevant Performances	187
10.6.2	Empirical Approach for ALT Design.	189
	References.	192
11	Reliability Growth Process and Data Analysis	193
11.1	Introduction	193
11.2	TAF Process	193
11.3	Reliability Growth Plan Model	195
11.3.1	Reliability Growth Plan Curve	195
11.3.2	Duane Model	195
11.4	Modeling Effectiveness of a Corrective Action	197
11.4.1	Type of Failure Modes	197
11.4.2	Effectiveness of a Corrective Action	197
11.5	Reliability Growth Evaluation Models	198
11.5.1	Software Reliability Growth Models and Parameter Estimation.	199
11.5.2	Discrete Reliability Growth Models for Complex Systems	202
11.5.3	Continuous Reliability Growth Models for Complex Systems	204
11.6	Design Validation Test	208
11.7	A Case Study	209
11.7.1	Data and Preliminary Analysis	209
11.7.2	Assessment and Prediction of Failure Intensity of Each Mode	209
11.7.3	Prediction of Unobserved Failure Modes	213
11.7.4	Discussion	215
11.7.5	Reliability Growth Plan Curve	216
	References.	217

Part III Product Quality and Reliability in Manufacturing Phase

12	Product Quality Variations and Control Strategies	221
12.1	Introduction	221
12.2	Variations of Quality Characteristics and Their Effect on Product Quality and Reliability	221

12.2.1	Variations of Quality Characteristics and Variation Sources	221
12.2.2	Effect of Unit-to-Unit Variability on Product Quality and Reliability.	223
12.2.3	Effect of Operating and Environmental Factors on Product Reliability	225
12.3	Reliability and Design of Production Systems.	226
12.3.1	Reliability of Production Systems	226
12.3.2	Design of Production Systems	228
12.4	Quality Control and Improvement Strategies.	228
12.4.1	Inspection and Testing.	229
12.4.2	Statistical Process Control	229
12.4.3	Quality Control by Optimization.	230
12.5	Quality Management	232
12.5.1	Principles of Quality Management	232
12.5.2	Quality Management Strategies.	232
12.5.3	ISO Quality Management System	233
	References.	234
13	Quality Control at Input.	235
13.1	Introduction	235
13.2	Acceptance Sampling for Attribute	235
13.2.1	Concepts of Acceptance Sampling	235
13.2.2	Acceptance Sampling Plan.	236
13.2.3	Operating-Characteristic Curve	236
13.2.4	Average Outgoing Quality	237
13.2.5	Acceptance Sampling Based on Binomial Distribution	237
13.2.6	Acceptance Sampling Based on Hypergeometric Distribution	240
13.3	Acceptance Sampling for a Normally Distributed Variable	241
13.4	Acceptance Sampling for Lifetime	242
13.5	Acceptance Sampling for Variable Based on the Binomial Distribution	245
13.6	Supplier Selection.	247
13.6.1	A Mathematical Model for Component Purchasing Decision	247
13.6.2	Supplier Selection Problem Involving Strategic Partnership with Suppliers	248
	References.	249

14	Statistical Process Control	251
14.1	Introduction	251
14.2	Control Charts for Variable	251
14.2.1	Concepts of Control Charts	251
14.2.2	Shewhart Mean Control Charts	252
14.2.3	Range Chart	253
14.2.4	Errors of a Control Chart	253
14.2.5	Average Run Length and Average Time to Signal	254
14.3	Construction and Implementation of the Shewhart Control Chart	256
14.3.1	Construction of Trial Control Chart	256
14.3.2	Sampling Strategy	257
14.3.3	Nonrandom Patterns on Control Charts	258
14.3.4	Warning Limits	259
14.3.5	Out-of-Control Action Plan	259
14.4	Process Capability Indices and Fraction Nonconforming	260
14.4.1	Process Capability Indices	260
14.4.2	Fraction Nonconforming	262
14.5	Multivariate Statistical Process Control Methods	263
14.5.1	Multivariate Control Charts	263
14.5.2	Multivariate Statistical Projection Methods	263
14.6	Control Charts for Attribute	264
14.6.1	Control Chart for Fraction Nonconforming	264
14.6.2	Control Chart for the Number of Defects Per Inspected Item	265
14.6.3	Control Chart for the Average Number of Defects Per Item	265
	References	266
15	Quality Control at Output	267
15.1	Introduction	267
15.2	Optimal Screening Limit Problem	267
15.2.1	Screening Limit Problem	267
15.2.2	An Optimization Model	268
15.3	Screening Tests	270
15.3.1	Types of Manufacturing Defects	270
15.3.2	Burn-in	272
15.3.3	Environmental Stress Screening	273
15.3.4	Comparison of ESS and Burn-in	273
15.4	Optimal Component-Level Burn-in Duration	274
15.5	Optimal System-Level Burn-in Duration	277
15.5.1	Reliability Model	278
15.5.2	Cost Model	279
	References	280

Part IV Product Quality and Reliability in Post-manufacturing Phase

16	Product Warranty	283
16.1	Introduction	283
16.2	Product Warranties	283
16.2.1	Concepts and Roles of Warranty	283
16.2.2	Maintenance-Related Concepts	284
16.3	Warranty Policies	284
16.3.1	Classification of Warranty Policies	284
16.3.2	Typical Warranty Policies	285
16.3.3	Special Policies for Commercial and Industrial Products	287
16.3.4	Reliability Improvement Warranties	288
16.4	Reliability Models in Warranty Analysis	288
16.4.1	Reliability Characteristics of Renewal Process	289
16.4.2	Reliability Characteristics of Minimal Repair Process	290
16.4.3	Imperfect Repair Models for Modeling Effect of Preventive Maintenance	290
16.4.4	Bivariate Reliability Models	293
16.4.5	Bi-failure-Mode Models	294
16.5	Warranty Cost Analysis	294
16.5.1	Cost Analysis for Non-repairable Product Under One-Dimensional FRW	295
16.5.2	Cost Analysis for Repairable Product Under One-Dimensional FRW	296
16.5.3	Cost Analysis for One-Dimensional PRW Policy	296
16.5.4	Cost Analysis for Two-Dimensional FRW Policy	297
16.6	Product Warranty Servicing	299
16.6.1	Spare Part Demand Prediction	299
16.6.2	Optimal Repair–Replacement Decision	300
16.6.3	Field Information Collection and Analysis	300
	References	301
17	Maintenance Decision Optimization	303
17.1	Introduction	303
17.2	Maintenance Policy Optimization	303
17.2.1	Maintenance Tasks	304
17.2.2	Timing of Maintenance Tasks	307
17.2.3	Optimization of Maintenance Policies	308

17.3	Repair-Replacement Policies.	308
17.3.1	Repair Cost Limit Policy and Its Optimization Model	309
17.3.2	Repair Time Limit Policy and Its Optimization Model	310
17.3.3	Failure Counting Policy with a Reference Age and Its Optimization Model	311
17.4	Time-Based Preventive Replacement Policies	313
17.4.1	Age Replacement Policy and Its Optimization Model	313
17.4.2	Periodic Replacement Policy with Minimal Repair and Its Optimization Model	315
17.4.3	Block Replacement Policy and Its Optimization Model	315
17.4.4	Discussion	316
17.5	Inspection Policies	316
17.5.1	Inspection Policy with Perfect Maintenance and Its Optimization Model	317
17.5.2	Inspection Policy with Minimal Repair and Its Optimization Model	318
17.6	Condition-Based Maintenance	319
17.7	System-Level Preventive Maintenance Policies	320
17.7.1	Group Preventive Maintenance Policy	320
17.7.2	Multi-level Preventive Maintenance Program	322
17.7.3	Opportunistic Maintenance Policy	322
17.8	A Simple Maintenance Float System	324
	References.	326
