

Contents

1	Elements of Information Retrieval	1
1.1	Introduction	1
1.2	Boolean Logic	5
1.2.1	Sets and Operators	6
1.2.2	Coordination Level	7
1.2.3	Weight Functions	8
1.2.4	Dirac Notation and Projectors	10
1.3	Vector Space Model	18
1.3.1	Basis and Indexing	19
1.3.2	Inner Product and Retrieval	21
1.3.3	Connections with Boolean Logic	22
1.3.4	Weighting Schemes	24
1.3.5	Latent Semantic Analysis	25
1.3.6	Relevance Feedback	30
1.4	Probabilistic Models	32
1.4.1	Relevance Model	33
1.4.2	Language Models	40
1.5	Machine Learning	44
1.5.1	Risk	45
1.5.2	Separability	47
1.5.3	Learning to Rank	49
1.6	Suggested Readings	50
2	Elements of Quantum Mechanics	53
2.1	Introduction	53
2.2	Observables	55
2.2.1	Vector Space Basis and Projector	57
2.2.2	Incompatibility	62
2.3	Superposition	66
2.3.1	Bits	66
2.3.2	Qubits	67

2.4	Probability	70
2.4.1	Probability Space	70
2.4.2	Density Matrix	72
2.4.3	Trace Rule	79
2.5	Interference	82
2.5.1	Double-Slit Experiment	82
2.5.2	Interference Term	85
2.6	Entanglement	89
2.6.1	Alice and Bob	89
2.6.2	Local Hidden Variables and Bell's Inequality	90
2.7	Detection	91
2.7.1	Detection, Projectors, and Probability	92
2.7.2	Optimal Detection	95
2.7.3	Detection of Pure States	97
2.8	Suggested Readings	99
3	Quantum Mechanics and Information Retrieval	101
3.1	Introduction	101
3.2	Quantum Formalism	102
3.2.1	Observables and Projectors	103
3.2.2	Indexing and Retrieval as Measurement	104
3.2.3	State Vector and Vector Space Model	105
3.2.4	Probability, Logic and Geometry	106
3.2.5	Gleason's Theorem	107
3.2.6	Incompatibility and Relevance	109
3.2.7	Entanglement and Correlation	111
3.3	Using Kinds	113
3.3.1	Definition of Kind	113
3.3.2	Operations on Kinds	115
3.3.3	Probability of Kinds	118
3.3.4	Ranking and Feedback	121
3.4	Concept Combination	124
3.4.1	Word Association	125
3.4.2	State, Context and Property	127
3.4.3	Using Superposition to Define Concepts	128
3.4.4	Using Entanglement to Define Concepts	130
3.4.5	Adding Superposition to Language Modeling	131
3.5	Word Ambiguity	134
3.5.1	Ambiguity and Superposition	134
3.5.2	Vector Negation and Negative Relevance Feedback	137
3.6	Semantic Spaces	141
3.6.1	Hyperspace Analogue to Language	141
3.6.2	Entanglement in Semantic Spaces	145

3.7	Contextual Search	146
3.7.1	Context and Projectors	148
3.7.2	Probability of Context	149
3.8	Ranking Principle	151
3.8.1	Probability Ranking Principle	151
3.8.2	Quantum Probability Ranking Principle	152
3.9	User Interaction	154
3.9.1	Implicit Relevance Feedback	155
3.9.2	Entangling Relevance and Behavior	156
3.9.3	Information Need Representation	158
3.9.4	Document Polyrepresentation	162
3.10	Relevance Detection	163
3.10.1	Ranking Using Subsets	164
3.10.2	Ranking Using Subspaces	167
3.10.3	Optimal Ranking	168
3.10.4	Using Quantum Detection in Relevance Feedback	170
3.11	Evaluation Studies	171
3.11.1	Vector Negation and Ambiguity	173
3.11.2	Contextual Search	174
3.11.3	Implicit Relevance Feedback	176
3.11.4	Entanglement of User Behavior and Document Content	176
3.11.5	Concept Combination	181
3.11.6	Semantic Spaces	182
3.11.7	Quantum Probability Ranking Principle	185
3.12	Suggested Readings	185
4	Future Work	189
4.1	Incompatibility Between Observables	189
4.2	Entanglement of States	190
4.3	Relevance Detection	191
4.4	Computing and Ranking Kinds	192
4.5	Alternative Logics for User Interaction	193
4.6	Multimedia and Multimodality	194
A	Other Topics of Quantum Mechanics	197
A.1	Representing Qubits	197
A.2	Why the Trace Rule	199
A.2.1	Wootters' Statistical Distance	199
A.2.2	Gleason's Theorem	201
A.3	Conditional Probability	202
A.4	Why Complex Numbers	205
A.5	No-Cloning Theorem	208

A.6	Indeterminacy Principle	210
A.6.1	Observable Operator	210
A.6.2	Expectation and Variance	212
A.6.3	Uncertainty Inequality	213
A.7	Bell's Inequality	217
A.8	The Schmidt Number and Decomposition	221
