

Contents

1	Introduction	1
1.1	Preface	1
1.2	Background	2
1.2.1	Spin-Resolved Photoemission Spectroscopy	2
1.2.2	Rashba Effect	4
1.2.3	Group-V Semimetal Bismuth	8
1.3	Purpose of the Present Research	10
	References	12
2	Basic Principle of Photoemission Spectroscopy and Spin Detector	15
2.1	Photoemission Spectroscopy	15
2.1.1	Principle of Photoemission Spectroscopy	15
2.1.2	Angle-Resolved Photoemission Spectroscopy	17
2.1.3	Photoemission Spectral Function	19
2.1.4	Photoemission Spectral Intensity	21
2.1.5	Energy Distribution Curve and Momentum Distribution Curve	22
2.2	Spin Detector	22
2.2.1	Various Spin Detectors	22
2.2.2	Principle of the Mott Scattering	24
2.2.3	Mott Detector	26
2.2.4	Derivation Method of Spin Polarization Spectrum	28
	References	29
3	Development of High Resolution Spin-Resolved Photoemission Spectrometer	31
3.1	Outline	31
3.2	Design and Construction	32
3.2.1	Mott Detector	32
3.2.2	Improvement of Hemispherical Analyzer System	34

3.2.3	Deflector	37
3.2.4	Discharge Problems	39
3.2.5	Surface Chamber	41
3.2.6	Other Refinements	45
3.3	System Test	48
3.3.1	Energy Resolution	48
3.3.2	Spin-Polarization	50
3.3.3	Sharman Function of the Mott Detector	52
3.4	Summary	54
	References	54
4	Anomalous Rashba Effect of a Bi Thin Film on Si(111)	57
4.1	Background and Goal of Research	57
4.2	Experimental Conditions	59
4.3	Results and Discussions	62
4.4	Summary	67
	References	67
5	Rashba Effect at Interface of a Bi Thin Film on Si(111)	69
5.1	Background and Goal of Research	69
5.2	Results and Discussions	70
5.3	Summary	77
	References	77
6	Conclusion	79
6.1	Development of Ultrahigh-Resolution Spin-Resolved Photoemission Spectrometer	79
6.2	Elucidation of Rashba Effect for Bi/Si(111) Thin Film by Spin-Resolved ARPES	80
6.3	Future Plans	80
	Curriculum Vitae	81

High-Resolution Spin-Resolved Photoemission
Spectrometer and the Rashba Effect in Bismuth Thin
Films

Takayama, A.

2015, XII, 83 p. 59 illus., 5 illus. in color., Hardcover

ISBN: 978-4-431-55027-3
