

Contents

1	Stochastic Differential Equations	1
1.1	Review of Stochastic Processes	1
1.1.1	Random Variables	1
1.1.2	Stochastic Processes	5
1.1.3	Itô Integrals	10
1.1.4	Itô's Formula	13
1.2	Stochastic Differential Equations	15
1.2.1	Lipschitz Continuous SDEs with Random Coefficients	15
1.2.2	Girsanov Transformations	18
1.2.3	SDEs with Deterministic Borel Coefficients	22
1.2.4	Backward Stochastic Differential Equations	24
1.3	Asset Pricing Problems	26
1.3.1	Formulation	26
1.3.2	Backward SDE for the Selling Price	27
1.3.3	Parabolic Equation Associated with (1.84)	29
2	Optimal Control for Diffusion Processes	31
2.1	Introduction	31
2.1.1	Formulations	32
2.1.2	Value Functions: Basic Properties	34
2.2	Dynamic Programming Principle (DPP)	40
2.2.1	Discrete-Time Dynamic Programming Principle	41
2.2.2	Approximation Theorem	46
2.2.3	Dynamic Programming Principle	47
2.2.4	Brownian Adapted Controls	50
2.2.5	Characterization of the Semigroup $(V_{\theta t}, \theta \leq t)$	53
2.3	Verification Theorems and Optimal Controls	58
2.3.1	Verification Theorems	58
2.3.2	Examples of Optimal Control	62
2.4	Optimal Investment Models	68
2.4.1	Formulations	68

2.4.2	Investment Problems for Power Utility Function	71
2.4.3	Optimal Investment Strategy	73
3	Viscosity Solutions for HJB Equations	79
3.1	Formulations	79
3.1.1	Definition of Viscosity Solution Based on Parabolic Differentials	80
3.1.2	Equivalent Definitions	82
3.1.3	Viscosity Solutions via Semigroups	86
3.2	Uniqueness of Viscosity Solutions	88
3.2.1	Crandall–Ishii Lemma	88
3.2.2	Structural Condition	93
3.2.3	Comparison Principle	95
3.3	HJB Equations for Control-Stopping Problems	100
3.3.1	Formulations	100
3.3.2	DPP	102
3.3.3	Semigroups Associated with DPP	109
3.3.4	American Option Price	112
4	Stochastic Differential Games	117
4.1	Formulations	117
4.1.1	Admissible Controls and Strategies	117
4.1.2	Formulation of Stochastic Differential Games	120
4.2	DPP	125
4.2.1	\mathcal{D} -Lower and \mathcal{D} -Upper Value Functions	125
4.2.2	DPP for Lower- and Upper Value Functions	131
4.3	Isaacs Equations	134
4.3.1	Semigroups Related to the DPP	135
4.3.2	Viscosity Solutions of the Isaacs Equations	138
4.4	Risk Sensitive Stochastic Controls and Differential Games	141
4.4.1	Logarithmic Transformation	141
4.4.2	Small Noise Limit	144
4.4.3	Note on Control with Infinite Time Horizon	148
5	Stochastic Parabolic Equations	153
5.1	Preliminaries	153
5.1.1	\mathbb{H} -Random Variables	154
5.1.2	Continuous Martingales	156
5.1.3	Correlation Operators	159
5.2	Stochastic Integrals	160
5.2.1	Definitions and Basic Properties	160
5.2.2	Martingale Inequalities	164
5.3	Stochastic Parabolic Equations with Colored Wiener Noises	167
5.3.1	Preliminaries	168
5.3.2	Linear Stochastic Parabolic Equations	171
5.3.3	Regularities of Solutions	174

5.3.4	Semilinear Stochastic Parabolic Equations with Lipschitz Nonlinearity	177
5.4	Itô's Formula	183
5.4.1	Preliminaries	184
5.4.2	Itô's Formula for \mathbb{H} -Valued Semimartingales	186
5.4.3	Itô's Formula for Linear Stochastic Parabolic Equations	190
5.5	Zakai Equations	197
5.5.1	Partially Observable Controlled Diffusion	197
5.5.2	Zakai Equation for a Conditional Gaussian Process	203
6	Optimal Controls for Zakai Equations	209
6.1	Controlled Zakai Equations	209
6.1.1	Preliminaries	210
6.1.2	Basic Properties of Solutions	211
6.2	Formulations of Control Problems	217
6.2.1	Preliminaries	218
6.2.2	Properties of the Terminal Cost	220
6.2.3	Running Cost	222
6.2.4	Value Functions	224
6.3	Dynamic Programming Principle (DPP)	225
6.3.1	Discrete-Time DPP	225
6.3.2	Continuous-Time DPP	228
6.3.3	Characterization of (V_t)	231
6.3.4	Derivatives of $V_t F(\phi)$	232
6.4	Viscosity Solutions of HJB Equations	236
6.4.1	Definitions	236
6.4.2	Existence of Viscosity Solutions	237
6.4.3	Uniqueness of the Viscosity Solution	241
	References	245
	Index	249
