

Contents

Part I Extension of Planar π -Electron Systems

1	Dibenzopentalenes and Related Compounds	3
	Takeshi Kawase	
2	Synthesis of a Porphyrin-Fused π-Electron System	17
	Hidemitsu Uno, Kazunari Tagawa, Hajime Watanabe, Naoki Kawamoto, Mina Furukawa, Tetsuo Okujima, and Shigeki Mori	
3	Higher-Order π-Electron Systems Based on Helicene Molecules	37
	Midori Akiyama, Koji Nakano, and Kyoko Nozaki	
4	Planar Cyclooctatetraenes and Related Ring Systems: Antiaromaticity and Applications	47
	Tohru Nishinaga	
5	Synthesis, Crystal Structures, and Solid-State Optical Properties of Substituted Tetracenes	69
	Chitoshi Kitamura	

Part II Curved π -Electron Systems

6	Chiral Sumanene, Triazasumanene, and Related Buckybowls	91
	Shuhei Higashibayashi and Hidehiro Sakurai	
7	Heteroatom-Containing Sumanene	107
	Junji Kobayashi	
8	Open-Cage Fullerene Derivatives: Synthesis, Reactions, and Encapsulation of a Small Molecule	117
	Yasujiro Murata	

9	Endohedral Metallofullerenes: From Chemical Reactivity to Material Performance	133
	Michio Yamada, Satoru Sato, Yuta Takano, Lai Feng, Shigeru Nagase, and Takeshi Akasaka	
10	Tuning Physical Properties and Structures of π-Electron System Formed by Single-Wall Carbon Nanotubes with Selected Chiralities	155
	Kazuhiro Yanagi	
11	Recent Progress on the Chemical Reactions of Single-Walled Carbon Nanotubes	177
	Yutaka Maeda and Takeshi Akasaka	
Part III Porphyrinoids		
12	Novel π-Conjugated Systems Based on N-Confused Porphyrinoids	201
	Masatoshi Ishida and Hiroyuki Furuta	
13	Heteroatom-Modified Porphyrinoids	223
	Yoshihiro Matano	
14	Synthesis of Novel Porphyrinoids from Dipyrins	243
	Hiroshi Shinokubo	
15	Möbius Aromatic and Antiaromatic Expanded Porphyrins	257
	Takayuki Tanaka and Atsuhiko Osuka	
16	Recent Advances in the Chemistry of Phthalocyanines as Functional Chromophores	273
	Soji Shimizu and Nagao Kobayashi	
Part IV Open-Shell π-Electron Systems		
17	Localized Singlet 1,3-Diradicals	295
	Manabu Abe and Sayaka Hatano	
18	Unique Orbital Interactions in the Ground and Electronically Excited States of Biradicals Brought about by the Existence of “Twisted π-Space”	315
	Hiroshi Ikeda, Yasunori Matsui, and Eisuke Ohta	
19	Recent Progress in Stable High-Spin Molecules Based on Nitroxide Radicals	323
	Shuichi Suzuki	
20	Organic Chemistry of Graphene Framework	337
	Akihito Konishi and Takashi Kubo	

Part V Heteroatom-Conjugated π -Electron Systems

21 Boron-Containing π-Electron Systems	363
Shigehiro Yamaguchi	
22 Doubly Bonded Silicon Compounds Showing Intramolecular Charge-Transfer Transitions	379
Takeaki Iwamoto	
23 π-Conjugated Disilenes and Tetrasilacyclobutadiene	393
Tsukasa Matsuo	
24 Tin-Containing π-Electron Systems	403
Yoshiyuki Mizuhata	

Part VI Supramolecular Chemistry of π -Electron Systems

25 Supramolecular Structures and Photoelectronic Properties of π-Complexes Composed of Self-Assembling Cyclic Porphyrin Dimers and Fullerenes	423
Fumito Tani, Hirofumi Nobukuni, Ken-ichi Sakaguchi, and Takuya Kamimura	
26 Sequence Control of π-Electron Systems	443
Kentaro Tashiro	
27 Integrated π-Electron Systems on Artificial Cell Membranes	457
Jun-ichi Kikuchi, Kazuma Yasuhara, and Keishiro Tahara	
28 Supramolecular Porphyrin Nanorods for Light Energy Conversion	475
Taku Hasobe and Hayato Sakai	
29 Metal Nanoparticle/Porphyrinoid Hybrids	493
Masayuki Kanehara	

Part VII Innovative Function of π -Electron Systems

30 Control of Chiral π-Space in Highly Organized π-Conjugated Polymer Nanotube Composites and Their Functions	511
Hisashi Fujihara and Tsukasa Nakahodo	
31 Photoinduced Electron-Transfer Functions of π-Electron Donor–Acceptor Supramolecular Complexes	529
Shunichi Fukuzumi	
32 Fused π-Electron Systems Containing Group 15 Elements and Their Application to Organic Electronics	545
Hayato Tsuji	

33	Fullerene Derivatives for Organic Solar Cells	559
	Yutaka Matsuo	
34	Efficient Organic Devices Based on π-Electron Systems: Comparative Study of Fullerene Derivatives Blended with a High Efficiency Naphthobisthiadiazole-Based Polymer for Organic Photovoltaic Applications.....	575
	Varun Vohra, Koichi Higashimine, Keisuke Ohdaira, Shogo Tsuzaki, and Hideyuki Murata	
35	Solution-Processed Organic Thin-Film Transistors	589
	Jun Takeya	
36	Unveiling Charge Carrier Transport in π-Conjugated Molecular Wire on Micro- and Macroscopic Scales	605
	Akinori Saeaki and Shu Seki	
37	STM Characterization of π-Electron Systems	621
	Yutaka Majima	
38	Light Amplification in Low-Dimensional Crystals of Thiophene/Phenylene Co-oligomer Derivatives	635
	Hisao Yanagi, Hitoshi Mizuno, Fumio Sasaki, and Shu Hotta	
Part VIII π-Electron Systems in Biosystems and Biomimetics		
39	Electron Transfer Pathway Analysis in Bacterial Photosynthetic Reaction Center	657
	Hirotaka Kitoh-Nishioka and Koji Ando	
40	Spectroscopic Analysis of the Redox Reactions of π-Conjugated Cofactors in Photosynthetic Reaction Center	675
	Takumi Noguchi	
41	Protein-Controlled Isomerization in Rhodopsins	695
	Hideki Kandori	
42	β-Diketiminates as Redox Non-innocent Supporting Ligands in Coordination Chemistry	715
	Shinobu Itoh and Yuma Morimoto	
43	Novel Functions of π-Electron Systems in a Heme-DNA Complex ...	731
	Yasuhiko Yamamoto and Tomokazu Shibata	
44	Increasing the Hole Transfer Rate Through DNA by Chemical Modification	751
	Kiyohiko Kawai and Tetsuro Majima	
45	Theoretical Calculations of Excitation Energy Transfer	761
	Kazuhiro J. Fujimoto
