

Contents

1	Introduction	1
2	Analyses of Temporal Factors of a Source Signal	3
2.1	Analyses of a Source Signal	3
2.1.1	Autocorrelation Function (ACF) of a Sound Source	3
2.1.2	Running ACF	4
2.1.3	Analyses of the Running ACF	4
2.1.4	Temporal Factors Extracted from the Running ACF	7
2.1.5	Minimum Values of the Effective Duration Extracted from Running ACF	9
2.2	Auditory Temporal Window	9
2.3	Vocal Source Signal	10
2.4	Running ACF of Piano Signal with Different Performance Style	13
3	Formulation and Simulation of the Sound Field in an Enclosure	15
3.1	Sound Transmission from a Point Source to Ear Entrances in an Enclosure	15
3.2	Orthogonal Factors of the Sound Field	16
3.2.1	Temporal Factors of the Sound Field	16
3.2.2	Spatial Factors of the Sound Field	17
3.2.3	Auditory Time Window for the IACF Processing	19
3.3	Simulation of Sound Localization	20
3.4	Simulation of the Reverberant Sound Field	23
4	Model of Auditory-Brain System	27
4.1	Neural Evidences in Auditory-Pathway and Brain System	27
4.1.1	Physical System	27
4.1.2	ABR from the Left and Right Auditory Pathways	27

4.2	Slow-Vertex Responses (SVR) Corresponding to Subjective Preference.	30
4.3	Response on Electro-Encephalogram (EEG) and Magneto-Encephalographic (MEG) Corresponding to Subjective Preference.	34
4.3.1	EEG in Response to Change of Δt_1	34
4.3.2	MEG in Response to Change of Δt_1	36
4.3.3	EEG in Response to Change of T_{sub}	38
4.3.4	EEG in Response to Change of the IACC	40
4.4	Specialization of Cerebral Hemispheres for Temporal and Spatial Factors of the Sound Field.	41
4.5	Model of Auditory-Brain System	43
5	Temporal and Spatial Primary Percepts of the Sound and the Sound Field	45
5.1	Temporal Percepts in Relation to the Temporal Factors of the Sound	45
5.1.1	Pitches of Complex Tones	45
5.1.2	Frequency Limits of the ACF Model.	48
5.1.3	Loudness of Sharply Filtered Noise.	49
5.1.4	Duration Sensation	50
5.1.5	Timbre of an Electric Guitar Sound with Distortion.	52
5.1.6	Concluding Remarks	54
5.2	Spatial Percepts in Relation to the Spatial Factors of the Sound Field	54
5.2.1	Localization of a Sound Source in the Horizontal and Median Plane	55
5.2.2	Apparent Source Width (ASW).	56
5.2.3	Subjective Diffuseness.	59
6	Theory of Subjective Preference of the Sound Field	63
6.1	Sound Fields with a Single Reflection and Multiple Reflections.	63
6.1.1	Preferred Delay Time of a Single Reflection.	63
6.1.2	Preferred Horizontal Direction of a Single Reflection to a Listener.	66
6.2	Sound Fields with Early Reflections and the Subsequent Reverberation.	66
6.3	Optimal Conditions Maximizing Subjective Preference	67
6.3.1	Listening Level (LL).	68
6.3.2	Early Reflections After the Direct Sound (Δt_1)	69

6.3.3	Subsequent Reverberation Time After the Early Reflections (T_{sub})	70
6.3.4	Magnitude of the Interaural Cross-Correlation Function (IACC).	70
6.4	Theory of Subjective Preference for the Sound Field	71
7	Examination of Subjective Preference Theory in an Existing Opera House	75
7.1	Measurement of Orthogonal Factors of the Sound Field at Each Seat	75
7.1.1	Procedure	75
7.1.2	Measurement Results	76
7.2	Subjective Preference Judgments	77
7.2.1	Procedure	78
7.2.2	Subjects	79
7.2.3	Results of the Paired-Comparison Tests (PCT)	80
7.3	Multiple Dimensional Analyses	80
7.3.1	Correlation Matrix of Physical Factors	80
7.3.2	Results and Discussion	81
8	Reverberance of the Sound Field	85
8.1	Reverberance in Relation to Four Orthogonal Factors	85
8.1.1	Scale Value of Reverberance in Relation to Δt_1 and T_{sub}	85
8.1.2	Scale Value of Reverberance in Relation to SPL and IACC	88
8.2	Examination on Reverberance in an Existing Hall	91
9	Improvements in Subjective Preferences for Listeners and Performers	97
9.1	Effects of Stage Building of Ancient Theaters	97
9.1.1	Binaural Impulse Responses	97
9.1.2	Reverberation	98
9.1.3	IACC	100
9.2	Balance of a Vocal Source on the Stage and Music in the Pit of Opera Houses	101
9.2.1	Balance of Listening Level	101
9.2.2	Balance of EDT, Δt_1 , and IACC	101
9.3	Results	103
9.4	Conclusions	106
9.5	Singing Styles on the Stage Blending with the Sound Field for Listeners	106
9.6	Preferred Delay Time of a Single Reflection, Δt_1 for Cellists	112

10 Optimizing Room-Forms.	119
10.1 Genetic Algorithm for Optimal Shape-Design.	119
10.2 A Simple Example of Designing a Shoebox-Type Room	121
10.3 A Shape Improved from the Shoebox-Type Room	122
10.3.1 A Shape Improved from the Shoebox-Type Room . . .	122
10.3.2 Actual Design of a Leaf-Shape Room	123
10.4 Effects of Scattered Reflection of a Canopy Array	124
10.4.1 Transfer Function for Panel Arrays	125
10.4.2 Lateral Reflection Components from Overhead Canopies	127
10.5 Acoustic Design Proposal for an Opera House	128
10.5.1 Considerations Due to the Temporal Factor	129
10.5.2 Considerations Due to the Spatial Factor	129
10.5.3 Acoustic Design Proposal for an Opera House	130
11 Visual Sensations on the Stage Blending with Opera and Music	133
11.1 Visual Pitch Perception of Complex Signals.	133
11.2 Preferred Conditions of a Flickering Light	137
11.3 Preferred Condition of Oscillatory Movements of a Circular Target.	142
11.4 Matching Movement of Camphor Leaves with Acoustic Tempo	144
11.5 Subjective Preference of Texture.	150
12 Design Theory of Opera House Stage Persisting Individual Creations.	153
12.1 Design Theory of Opera House Stage	153
12.2 Design Study of an Opera House	157
12.2.1 Temporal Design	157
12.2.2 Crystal Opera House	159
Appendix: Comparison Between Measured Orthogonal Factors Using a Dummy Head and Four Human-Real Heads	161
References.	167
Index	177

Opera House Acoustics Based on Subjective Preference
Theory

Ando, Y.

2015, XIV, 179 p. 130 illus., 8 illus. in color., Hardcover
