1	Introduction	1
1.1	Overview of AdS/CFT	1
1.2	AdS/Real-World	4
1.3	Outline	6
1.4	Notation and Conventions	7
1.5	Some Useful Textbooks	7
	References	8
2	General Relativity and Black Holes	9
2.1	Particle Action	10
2.2	Einstein Equation and Schwarzschild Metric	14
2.3	Physics of the Schwarzschild Black Hole	15
2.3.1	Gravitational Redshift	15
2.3.2	Particle Motion	16
2.4	Kruskal Coordinates	19
	Appendix: Review of General Relativity	21
3	Black Holes and Thermodynamics	25
3.1	Black Holes and Thermodynamics	25
3.1.1	Zeroth Law	26
3.1.2	Surface Gravity ♦	27
3.1.3	First Law	29
3.2	From Analogy to Real Thermodynamics	29
3.2.1	Hawking Radiation	29
3.2.2	Hawking Temperature and Euclidean Formalism	31
3.2.3	On the Origin of Black Hole Entropy ♦	33
3.3	Other Black Holes	35
3.3.1	Higher-Dimensional Schwarzschild Black Holes	35
3.3.2	Black Branes	36
3.3.3	Charged Black Holes	38

3.4	Summary	40
	Appendix: Black Holes and Thermodynamic Relations ♦	41
	References.	42
4	Strong Interaction and Gauge Theories	43
4.1	Strong Interaction and QCD	43
4.1.1	Overview of QCD	43
4.1.2	Phase Structure of QCD	44
4.1.3	Heavy-Ion Experiments	45
4.1.4	“Unexpected Connection Between String Theory and RHIC Collisions”.	46
4.2	Large- N_c Gauge Theory.	48
4.3	Summary	53
	References.	53
5	The Road to AdS/CFT	55
5.1	String Theory: Prehistory	55
5.2	String Theory as the Unified Theory	58
5.2.1	String Oscillations and Elementary Particles.	58
5.2.2	D-brane	60
5.2.3	Why Open and Closed Strings?	61
5.2.4	String Interactions.	62
5.2.5	Supergravity: Classical Gravity Approximation of String Theory.	64
5.3	Reexamine String Theory as the Theory of Strong Interaction	66
5.3.1	Comparison of Partition Functions	66
5.3.2	Scale Invariance and Its Consequences	68
5.3.3	AdS/CFT, Finally	72
5.4	Summary	74
	Appendix 1: Scale, Conformal, and Weyl Invariance ♦	75
	Appendix 2: D-brane and AdS/CFT ♦	77
	References.	84
6	The AdS Spacetime.	85
6.1	Spacetimes with Constant Curvature	85
6.1.1	Spaces with Constant Curvature	85
6.1.2	Spacetimes with Constant Curvature	87
6.1.3	Relation with Constant Curvature Spaces.	89
6.1.4	Various Coordinate Systems of AdS Spacetime	89
6.1.5	Higher-Dimensional Cases	91
6.2	Particle Motion in AdS Spacetime ♦	94
6.3	Remarks on AdS/CFT Interpretations	98
6.4	Summary	100

7	AdS/CFT—Equilibrium	101
7.1	The AdS Black Hole	101
7.2	Thermodynamic Quantities of AdS Black Hole	102
7.2.1	Thermodynamic Quantities	102
7.2.2	Free Gas Computation	106
7.3	The AdS Black Hole with Spherical Horizon	108
7.4	Summary	109
	Appendix: AdS Black Hole Partition Function \blacklozenge	110
	References	115
8	AdS/CFT—Adding Probes	117
8.1	Basics of Wilson Loop	117
8.2	Wilson Loops in AdS/CFT: Intuitive Approach	120
8.3	String Action	126
8.4	Wilson Loops in AdS/CFT: Actual Computation	129
8.5	Summary	132
	Appendix: A Simple Example of the Confining Phase	132
	References	133
9	Basics of Nonequilibrium Physics	135
9.1	Linear Response Theory	135
9.1.1	Ensemble Average and Density Matrix	135
9.1.2	Linear Response Theory	137
9.1.3	Transport Coefficient: An Example	140
9.2	Thermodynamics	141
9.3	Hydrodynamics	144
9.3.1	Overview of Hydrodynamics	144
9.3.2	Example: Diffusion Problem	145
9.3.3	Perfect Fluid	150
9.3.4	Viscous Fluid	153
9.3.5	When a Current Exists \blacklozenge	155
9.3.6	Kubo Formula for Viscosity	157
9.3.7	Linearized Hydrodynamic Equations and Their Poles	159
9.4	Summary	162
	References	163
10	AdS/CFT—Non-equilibrium	165
10.1	GKP-Witten Relation	165
10.2	Example: Scalar Field	169
10.3	Other Examples	173
10.3.1	Maxwell Field	173
10.3.2	Massive Scalar Field	174
10.3.3	Gravitational Field	176

10.4	On the Lorentzian Prescription ♦	177
10.5	Summary	180
	Appendix: More About Massive Scalars ♦	180
	References.	182
11	Other AdS Spacetimes	185
11.1	Overview of Other AdS Spacetimes	185
	Appendix: Explicit form of Other AdS Spacetimes ♦	190
	References.	199
12	Applications to Quark-Gluon Plasma.	201
12.1	Viscosity of Large- N_c Plasmas	201
12.1.1	Transport Coefficients of $\mathcal{N} = 4$ Plasma	201
12.1.2	Implications	204
12.1.3	Universality of η/s	206
12.1.4	How to Solve Perturbation Equation	208
12.2	Comparison with QGP	212
12.2.1	How Can One See Viscosity in the Experiment?	212
12.2.2	Comparison with Lattice Simulation	214
12.2.3	Why Study Supersymmetric Gauge Theories?	215
12.3	Other Issues	218
12.3.1	Viscosity Bound	218
12.3.2	Corrections to the Large- N_c Limit ♦	219
12.3.3	Revisiting Diffusion Problem: Hydrodynamic Application ♦	221
12.4	Summary	224
	Appendix 1: Tensor Mode Action ♦	225
	Appendix 2: Some Other Background Materials ♦	230
	Appendix 3: Gravitational Vector Mode Computation ♦	232
	Appendix 4: $\mathcal{N} = 4$ Diffusion Constant and Conductivity ♦	236
	References.	241
13	Basics of Phase Transition.	245
13.1	Phase Transition	245
13.1.1	Second-Order Phase Transition	246
13.1.2	First-Order Phase Transition	249
13.1.3	Inhomogeneous Case.	250
13.1.4	Critical Phenomena.	252
13.2	Superconductivity	255
13.2.1	Ginzburg-Landau Theory of Superconductivity	255
13.2.2	Normal, Perfect, and Superconductors	260
13.2.3	High- T_c Superconductors	263
13.3	Summary	264
	References.	265

14 AdS/CFT—Phase Transition	267
14.1 Why Study Phase Transitions in AdS/CFT?	267
14.2 First-Order Phase Transition	268
14.2.1 Simple Example	268
14.2.2 Hawking-Page Transition	270
14.3 Second-Order Phase Transition: Holographic Superconductors	274
14.3.1 Overview	274
14.3.2 Probe Limit	276
14.3.3 Other Issues ♦	281
14.4 Summary	284
Appendix: More About Holographic Superconductor ♦	285
References	288
Index	291
