1	Games in Game Theory	1
1.1	Games in Game Theory	1
1.2	Non-cooperative and Cooperative Games	2
1.3	Components of a Game	2
	References	5
2	Strategic Dominance	7
2.1	Prisoner's Dilemma	7
2.2	Strict Dominance	8
2.3	Common Knowledge of a Game	11
2.4	Iterative Elimination of Strictly Dominated Strategies	11
2.5	Weak Dominance	14
2.6	Maximin Criterion	15
2.7	Matrix Representation of 3-Player Games	18
	Problems	18
	References	21
3	Nash Equilibrium	23
3.1	Nash Equilibrium	23
3.2	Cournot Game	26
3.3	Bertrand Game	30
	3.3.1 When Products Are Differentiated	30
	3.3.2 When Products Are Perfect Substitutes	31
3.4	Location Choice Game	33
3.5	Strategic Dominance and Nash Equilibrium*	34
3.6	Existence of Nash Equilibrium and Mixed Strategies	36
3.7	Existence Theorem**	42
3.8	Rationalizability**	45
	Problems	49
	References	54

4	Backward Induction	57
4.1	Extensive Form Games	57
4.2	Strategies in an Extensive-Form Game	63
4.3	Backward Induction	68
4.4	Chain Store Paradox	71
4.5	Stackelberg Game	74
4.6	Ultimatum Game	75
4.7	Alternating Offer Bargaining Game	76
4.8	Introduction of Nature	80
4.9	Common Knowledge of Rationality and Backward Induction**	84
	Problems	85
	References	88
5	Subgame Perfect Equilibrium	91
5.1	Subgame Perfect Equilibrium	91
5.2	Capacity Choice Game	93
5.3	Prisoner's Dilemma of Neuroeconomics	95
5.4	Finitely Repeated Games	97
5.5	Infinitely Repeated Games	102
5.6	Equilibrium Collusion	111
5.7	Perfect Folk Theorem*	112
5.8	Repeated Games with Non-simultaneous Moves*	119
5.9	Repeated Games with Overlapping Generations*	123
	Problems	125
	References	131
6	Bayesian Nash Equilibrium	133
6.1	Formulation of Games with Incomplete Information	133
6.2	Bayesian Games	134
	6.2.1 Ex-Ante Optimization	138
	6.2.2 Optimization by 'Type' Players	140
6.3	Cournot Game with Incomplete Information	140
6.4	Auctions	143
6.5	Harsanyi's Purification Theorem*	146
	Problems	148
	References	151
7	Perfect Bayesian Equilibrium	153
7.1	Extensive-Form Games with Incomplete Information	153
7.2	Signaling Games	158
7.3	Pooling and Separating Equilibrium	160

7.4	Refinements of Equilibria*	164
	Problems	167
	References.	171
8	Equilibrium Refinements**	173
8.1	Further Stability	173
8.2	Trembling-Hand Perfect Equilibrium	174
8.3	Proper Equilibrium	180
8.4	Sequential Equilibrium	182
8.5	A Solution to the Chain Store Paradox	188
8.6	Infinitely Repeated Games with Imperfect Monitoring	193
8.7	Random Matching Games	197
8.8	On the Informational Structure of Games.	198
	Problems.	200
	References.	202
9	Equilibrium Selection*	205
9.1	Payoff Dominance and Risk Dominance	205
9.2	Global Games**	209
9.3	The Kandori-Mailath-Rob Model**	212
	Problems.	215
	References.	216
10	Evolutionary Stability*	217
10.1	Evolutionarily Stable Strategy.	217
10.2	Weaker Stability Concepts	224
10.3	Cheap Talk	226
10.4	Asymmetric Games.	228
10.5	Stability for Extensive Form Games	228
10.6	Voluntarily Separable Repeated Prisoner's Dilemma**	229
10.7	Replicator Dynamics	238
	Problems.	244
	References.	245
	Appendix: Mathematical Appendix.	247
	Index	257

The star marks indicate difficulty: no star means introductory level, * means intermediate level, and ** means advanced level. Chapters with varying difficulties have sections with different number of stars. Otherwise all sections are of the same level as the chapter.

Non-Cooperative Game Theory

Fujiwara-Greve, T.

2015, XI, 260 p. 64 illus., Hardcover

ISBN: 978-4-431-55644-2
