

Contents

1	High-Energy Charged Particle Interaction with Matter.	1
1.1	Preliminary Remarks	1
1.2	Interaction of Radiations in Materials	4
1.3	Stopping Power of Materials for High-Energy Charged Particles	5
	References	10
2	Chemistry of High-Energy Charged Particles: Radiations and Polymers	11
	References	17
3	A Particle with High Energy: A Versatile Tool for Nanomaterials	19
	References	26
4	Bio-compatible Nanomaterials.	27
4.1	Preliminary Remarks	27
4.2	Fabrication of Protein Nanowires.	28
4.3	Functionalization of Protein Nanowires.	32
4.4	Fabrication of 2D Protein Sheets Based on Nanowires	35
	References	38
5	Stimuli-Responsive Nanomaterials	41
5.1	Preliminary Remarks	41
5.2	Fabrication of Thermoresponsive Nanowires.	42
5.3	Fabrication of Photoresponsive Nanowires	46
	References	51
6	Nanowires for Renewable Energy	53
6.1	Preliminary Remarks	53
6.2	Universal Formation of Fullerene Nanowires by SPNT	56

6.3	<i>p/n</i> Heterojunction Nanowires	59
6.4	Photovoltaic Application of Nanowires	60
6.5	Nanowires for the Future Photo-Energy Conversion	65
	References	65
7	Single-Particle Triggered Polymerization	69
7.1	Preliminary Remarks	69
7.2	Formation of Nanowires from Alkyne-Functionalized Compounds.	71
7.3	High-Energy Charged Single-Particle as a Versatile Tool for Nanofabrication of Organic Materials ~From Cross-linking to Polymerization~.	73
	References	74

High-Energy Charged Particles
Their Chemistry and Use as Versatile Tools for
Nanofabrication

Seki, S.; Sakurai, T.; Omichi, M.; Saeki, A.; Sakamaki, D.
2015, X, 74 p. 44 illus., 41 illus. in color., Softcover
