

Contents

1	Introduction: Overview of DNA Origami as Biomaterials and Application	1
1.1	Introduction	1
1.2	2D DNA Origami Nanostructures	2
1.3	Programmed Arrangements of Large Sized DNA Nanostructures.	3
1.4	3D DNA Origami Nanostructures	6
1.5	Functionalization of 2D Origami Nanostructures	8
1.5.1	Selective Placements of Functional Groups	8
1.5.2	Single-Molecule Chemical Reaction	8
1.5.3	Selective Modifications with Nanomaterial	9
1.6	Applications to Single Molecule Analysis	10
1.6.1	Control of DNA Methylation and DNA Repair in the DNA Nanospace.	10
1.6.2	Visualization of DNA Structural Changes	11
1.6.3	Single Molecule Fluorescent Imaging	12
1.7	Applications to DNA Molecular Machines	14
1.8	Applications to Biological System	16
1.9	Conclusion and Prospects	17
	References	18
2	Direct Observation of Single Hybridization and Dissociation of Photoresponsive Oligonucleotides in the Designed DNA Nanostructure	21
2.1	Introduction	21
2.2	Experimental Section	23
2.2.1	Synthesis of Oligonucleotides Containing Photoresponsive Domains	23
2.2.2	Preparation of the DNA Frame	23
2.2.3	Introduction of Two dsDNAs Containing Photoresponsive Domains into the DNA Frame	23

2.2.4	Photoirradiation to the dsDNA-Attached DNA Frame	24
2.2.5	High-Speed AFM Imaging of the dsDNAs in the DNA Frame	24
2.3	Results and Discussion	24
2.3.1	Direct Imaging of the Single Photoresponsive Duplex by AFM	24
2.3.2	Photoirradiation of Oligonucleotides Containing Photoresponsive Domains	26
2.3.3	Photoirradiation of Photoresponsive Nanoframe in Solution	26
2.3.4	Direct Observation of Dissociation of Photoresponsive Domains in Nanoframe Under UV Irradiation	29
2.3.5	Direct Observation of Association of Photoresponsive Domains in Nanoframe Under Visible Light Irradiation	30
2.3.6	Reversible Photoswitching of Photoresponsive Domains Repeatedly in a Single DNA Nanoframe	31
2.4	Conclusion	33
	References	33
3	Direct Observation of Logic-Gated Dual-Switching Behaviors Inducing the State Transition in a DNA Nanostructure	35
3.1	Introduction	35
3.2	Experimental Section	37
3.2.1	Design of DNA Nanoframe Containing Six Connecting Positions	37
3.2.2	Assembly of Dual-Switching DNA Nanoframe Containing Photoresponsive Oligonucleotides and G-Tracts	37
3.2.3	Photoirradiation to the Dual-Switching DNA Nanoframe	38
3.3	Results and Discussion	39
3.3.1	Evaluation of the State Transition in Solution by Switching Photoirradiation and Potassium Ion	39
3.3.2	Direct Visualization of the State Transition from AS-1 to AS-2 Using High-Speed AFM	41
3.3.3	Direct Visualization of the Reverse State Transition from AS-2 to AS-1 Using High-Speed AFM	42
3.4	Conclusion	44
	References	45

4 Multi-directional Assembly/Disassembly of Photocontrolled DNA Nanostructures in Programmed Patterns	47
4.1 Introduction	47
4.2 Experimental Sections	49
4.2.1 Modification of Staple Strands Along Hexagonal Edges with Photoresponsive Oligonucleotides	49
4.2.2 Assembly of Single Hexagonal Unit.	49
4.2.3 Agarose Gel Electrophoresis Analysis.	50
4.2.4 Fluorescent Analysis of Disassemble/Assemble of Hexagonal Dimers	50
4.3 Results and Discussions	50
4.3.1 Preparation and Characterization of Hexagonal Dimer	51
4.3.2 Hexagonal Trimmers in Linear and Curved Arrangement Without Facing Orientation Control	52
4.3.3 Hexagonal Oligomers Without Facing Orientation Control.	54
4.3.4 Hexagonal Oligomers in Linear and Curved Arrangements with Facing Orientation Control	57
4.3.5 Large Hexagonal Oligomers with Restricted Facing Orientation Control	59
4.3.6 Evaluation of Reversible Assemble and Disassembly of Hexagonal Dimers by Gel Electrophoresis.	60
4.3.7 Dynamic Analysis of Assemble and Disassembly of Photocontrolled Hexagonal Dimers.	63
4.4 Conclusion	64
References	64
5 Arrangement of Gold Nanoparticles onto a Slit-Type DNA Nanostructure in Various Patterns	67
5.1 Introduction	67
5.2 Experimental Section	67
5.2.1 Preparation of Lipoic Acid Attached Oligonucleotides	67
5.2.2 DNA Slit Preparation	68
5.2.3 AuNPs Attachment onto the DNA Slit for Imaging	68
5.3 Results and Discussion.	68
5.3.1 Design and Preparation of DNA Slit	68
5.3.2 Placement of AuNPs onto DNA Slit in Solution	69
5.3.3 Placement of AuNPs onto DNA Slit on Mica Surface	71
5.4 Conclusion	72
References	72
Curriculum Vitae	75

Artificially Controllable Nanodevices Constructed by DNA

Origami Technology

Photofunctionalization and Single-Molecule Analysis

Yang, Y.

2015, XIII, 76 p. 44 illus., 1 illus. in color., Hardcover

ISBN: 978-4-431-55768-5
