

Contents

1	A Historical View of Materials Science	1
1.1	Emergence of Materials Science as an Interdisciplinary Field	1
1.2	Classical Fields Within Materials Science	2
1.3	Peculiarity of Materials Science and Partnership with Mathematics	9
	References	9
2	Influence of Mathematics on Materials Science Upto Date	11
2.1	Geometric Structures of Atomic Configurations	11
2.1.1	Atomism	11
2.1.2	The Miracle Year of 1669; The Emergence of Crystallography and Optocrystallography from Mineralogy	12
2.1.3	Quasicrystals.	15
2.1.4	Aperiodic Tiling and Disordered System	16
2.1.5	Graph Modeling for Nano-Materials	18
2.1.6	Crystal Lattices and Their Standard Realizations	18
2.2	Quantum Materials.	19
2.2.1	Electronic Characteristics of Periodic Materials System: Band Theory.	20
2.2.2	Spin Current.	22
2.2.3	Integer Quantum Hall Effect (IQHE)	23
2.2.4	Hofstadter's Butterfly.	23
2.2.5	Central Limit Theorem for Magnetic Transition Operators	24
2.2.6	Topological Insulator.	25
2.2.7	Non Commutative Bloch Theory.	26
2.3	Pattern Formation	27
2.3.1	Patterns in Equilibrium: Soap Films, Soap Bubbles	28
2.3.2	Fundamentals of Crystal Growth	29
2.3.3	Reaction–Diffusion Equation.	32

2.3.4	Mean Curvature Flow to Describe Crystal Growth.	35
2.3.5	Level Set Method	36
2.3.6	Phase Field Method.	36
2.4	Other Tools.	38
2.4.1	Computed Tomography	38
2.4.2	Some Other Computational Tools	40
2.5	Global Trend to Encourage Mathematics–Materials Science Cooperation.	43
	References	46
3	Some Specific Examples of Mathematics–Materials Science	
	Collaboration at AIMR	51
3.1	Elucidation of Metallic Glass Structure by Computational Homology.	53
3.2	Application of a Stochastic Model	55
3.2.1	Stoichiometry Control Based on a Mathematical Model	55
3.2.2	Deformation Analysis of Bulk Metallic Glass Using a Stochastic Model.	57
3.3	New Geometric Measures for Finite Carbon Nanotubes	59
3.4	Materials Having Network Structures	62
3.4.1	Mathematical Technique Predicts Molecular Magnet	62
3.4.2	Mixing Time of Molecules Inside of Nanoporous Gold	64
	References	66
4	Breakthroughs Based on the Mathematics–Materials Science	
	Collaboration.	69
4.1	Real Interdisciplinary Integration	69
4.2	Organization Promoting Mathematics–Materials Science Collaboration	72
4.3	Specific Problems and Applications in the Future.	74
5	Epilogue	77
	References	78
	Appendix A: Supplements to “Quantum Materials”	79

A New Direction in Mathematics for Materials Science

Ikeda, S.; Kotani, M.

2015, X, 86 p. 38 illus., 4 illus. in color., Softcover

ISBN: 978-4-431-55862-0
