1	Introduction: Thermoluminescence and Other Forms of Luminescence	1
1.1	Thermoluminescence: Definition	1
1.2	Early History	2
1.3	Luminescence	4
1.3.1	Photoluminescence	5
1.3.2	Fluorescence and Phosphorescence	6
1.4	Luminescence in Condensed Matter	8
1.4.1	Optically Stimulated Luminescence	10
1.5	Cathodoluminescence	10
1.6	Radioluminescence	10
1.7	Scintillation	11
1.8	Electroluminescence	11
1.9	Chemiluminescence	12
1.10	Bioluminescence	12
1.11	Triboluminescence	12
1.12	Nature's Luminescence Wonders	13
	References	13
2	Induction of Thermoluminescence	15
2.1	Essential Conditions for TL Induction	15
2.2	Defect Centers in TL	16
2.2.1	Defects Which Trap Electrons	17
2.2.2	Defects Which Trap Holes	18
2.3	Defect Generation by Irradiation	19
2.4	Interactions of Radiations	21
2.4.1	Heavy Charged Particles	22
2.4.2	Light Charged Particles	22
2.4.3	Electromagnetic Radiations (X and Gamma Rays)	23
2.4.4	Neutrons	25
2.5	Dose Dependence of the Filling of Traps	27
	References	28

3 Thermal Stimulation of Luminescence and Theory of the Glow Curves	29
3.1 Energy Levels of Solid Phosphors	29
3.2 The Thermal Stimulation Process	30
3.2.1 Energy Distribution of Electrons in the Traps	30
3.2.2 Frequency Factor	32
3.3 The Thermoluminescence Models	33
3.3.1 Randall and Wilkins Model	35
3.3.2 Garlick and Gibson Model	39
3.3.3 General Order Kinetics	42
3.3.4 Comparison of GO Kinetics with the OTOR Physical Model	48
3.4 Mixed Order Kinetics	53
3.5 Realistic Physical Models	56
3.5.1 Generalized Scheme	56
3.5.2 Interactive Multi-trap System	59
3.5.3 Non-interactive Multi-trap System	65
3.6 Localized Recombination Model	68
3.7 KO of the Glow Curves of Real Materials	71
References	74
4 Kinetics Analysis of TL Glow Curves	77
4.1 Basic Parameters of TL Glow Peaks	77
4.2 First Approximation of E	79
4.3 Initial Rise Method	80
4.3.1 Analysis of Multi-peak Glow Curves	82
4.3.2 Sources of Error	83
4.4 Various Heating Rates Method	85
4.4.1 Hoogenstraaten's Method	86
4.4.2 Merits, Demerits, and Precautions	87
4.5 Isothermal Decay Method	87
4.6 Methods Based on the Shape of the Glow Peak	89
4.6.1 Precautions and Sources of Error	91
4.7 Curve Fitting Method	92
4.7.1 Limitations of Peak Shape and Curve Fitting Methods	93
4.8 General Precautions and Uncertainties in Glow Curve Analysis	95
4.9 Concluding Remarks	99
References	101

5	The Quasi-Equilibrium Problem in Thermoluminescence	103
5.1	Definition	103
5.2	An Alternative Definition for QE and Its Meaning with Reference to Its Conventional Definition	105
5.2.1	Reconciliation of $Q(T)$ with the Conventional Definition of QE	106
5.2.2	Inferences from the Use of $Q(T)$ and $P(T)$	107
5.3	Dependence of QE on System Parameters	110
5.3.1	Recombination Life Time	112
5.3.2	More Examples of Dependence of QE on System Parameters	115
5.4	Lower Limit of Parameter Values for the Validity of QE Assumption	117
5.5	Validity of QE Assumption in the TL of Inorganic Phosphors	121
5.6	Dependence of QE on Heating Rate	122
5.7	Changes in the Glow Peak Time Span T_R and the Glow Peak Shape Due to the Change in the Heating Rate	127
5.8	Test for QE for the Glow Peaks of Real Materials	129
5.9	Assessing the Free Carrier Life Time and the Parameters of a Real Sample	130
