<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Background	1
1.2	Phase-Locked Loop—A Historical Perspective	2
1.3	Application of Phase-Locked Loops	3
1.4	PLL in Communication System	6
1.4.1	Tracking Bandpass Filter for Angle Modulated Signals	6
1.4.2	CW Carrier Recovery	7
1.4.3	PLL Frequency Divider and Multiplier	8
1.4.4	PLL Amplifier for Angle Modulated Signals	9
1.4.5	Frequency Synthesis and Angle Modulation by PLL	9
1.4.6	Coherent Demodulation by APLL	11
1.4.7	Suppressed Carrier Recovery Circuits	12
1.4.8	Clock Recovery Circuit	16
1.5	From PLL to DPLL	18
1.6	Application of DPLL	22
1.7	Organization of the Monograph	23
	References	25
<b>2</b>	<b>Transmitter Receiver Techniques</b>	<b>31</b>
2.1	Notation and Basics of Baseband and Passband Signals	31
2.1.1	Convolution	32
2.1.2	Cross-Correlation	33
2.1.3	Autocorrelation	34
2.1.4	Power Spectral Density	35
2.1.5	Basic Definitions Related to Baseband and Passband Signals	37
2.1.6	Upconversion Theorem in Time Domain	38
2.1.7	Upconversion Theorem in Frequency Domain	38
2.1.8	Complex Envelope	38

2.1.9	Complex Upconversion in Time Domain . . . . .	39
2.1.10	Complex Downconversion . . . . .	39
2.1.11	Power and Energy Spectra . . . . .	40
2.1.12	Complex Envelope of a Data Signal . . . . .	41
2.1.13	Passband White Noise . . . . .	41
2.1.14	Thermal Noise . . . . .	42
2.2	Baseband Representation of the Passband Signals . . . . .	42
2.3	Conclusion. . . . .	46
	Further Reading . . . . .	47
<b>3</b>	<b>Modulation Techniques and Signal Processing . . . . .</b>	<b>49</b>
3.1	A Typical Digital Communication System . . . . .	49
3.2	Modulation . . . . .	51
3.2.1	Choice of Modulation Scheme . . . . .	51
3.2.2	Advantages of Modulation . . . . .	51
3.2.3	Linear and Nonlinear Modulation Techniques. . . . .	52
3.2.4	Amplitude and Angle Modulation . . . . .	52
3.2.5	Analog and Digital Modulation Techniques . . . . .	52
3.3	Some Popular Digital Modulation Techniques . . . . .	53
3.3.1	Amplitude Shift Keying. . . . .	53
3.3.2	Frequency Shift Keying (FSK) . . . . .	54
3.3.3	Phase Shift Keying . . . . .	57
3.3.4	Minimum Shift Keying (MSK). . . . .	61
3.3.5	Gaussian Minimum Shift Keying (GMSK). . . . .	62
3.4	Quadrature Amplitude Modulation . . . . .	65
3.4.1	QAM Advantages and Disadvantages . . . . .	66
3.4.2	QAM Comparison with Other Modes . . . . .	67
3.4.3	QAM Applications . . . . .	67
3.4.4	Constellation Diagrams for QAM . . . . .	68
3.4.5	QAM Bits Per Symbol . . . . .	68
3.4.6	QAM Noise Margin . . . . .	69
3.5	Pulse Shaping. . . . .	69
3.5.1	Nyquist Pulse Shaping. . . . .	70
3.5.2	Raised Cosine Roll-off Filtering . . . . .	70
3.5.3	Realization of Pulse Shaping Filters . . . . .	71
3.6	Line Coding. . . . .	72
3.7	Wireless Channel . . . . .	73
3.8	Statistical Modeling of Flat Fading . . . . .	75
3.8.1	Rayleigh Fading . . . . .	75
3.8.2	Rician Fading. . . . .	76
3.8.3	Nakagami-m Fading . . . . .	77
3.9	Sum-of-Sinusoids-Based Nakagami-m Channel Modeling . . . . .	78
3.9.1	Clarks Rayleigh Fading Model . . . . .	79
3.9.2	Pop-Beaulieu Simulator . . . . .	80

3.9.3	Improved Rayleigh Fading Model. . . . .	80
3.9.4	Relationship Between Gaussian, Gamma, and Nakagami Random Variables . . . . .	82
3.9.5	Sum-of-Sinusoids-Based Nakagami-m Channel Simulator. . . . .	84
3.10	Conclusion. . . . .	86
	References. . . . .	86
	Further Reading . . . . .	86
<b>4</b>	<b>Basic Considerations of PLL and Its Types . . . . .</b>	<b>89</b>
4.1	Basic Considerations of PLL . . . . .	89
4.1.1	Types of Phase-Locked Loop . . . . .	90
4.2	Operational Principle of PLL . . . . .	91
4.2.1	Important PLL Characteristics . . . . .	92
4.2.2	Performance Parameters of Phase-Locked Loop . . . . .	92
4.3	Mathematical Model of PLL . . . . .	93
4.3.1	Some Basic Concepts . . . . .	93
4.3.2	Model for Phase/Frequency Detector . . . . .	94
4.3.3	Model for Voltage Control Oscillator . . . . .	95
4.4	Nonlinear PLL . . . . .	96
4.5	S-Domain Analysis of Phase-Locked Loop . . . . .	99
4.6	Conclusion. . . . .	101
	Further Reading . . . . .	101
<b>5</b>	<b>Digital Phase-Locked Loop . . . . .</b>	<b>103</b>
5.1	Introduction . . . . .	103
5.2	Importance of Digital Phase-Locked Loop . . . . .	104
5.3	Components of Digital Phase-Locked Loop . . . . .	104
5.3.1	Phase Frequency Detector . . . . .	105
5.3.2	Numerically Controlled Oscillator . . . . .	106
5.3.3	Loop Filter. . . . .	107
5.3.4	Frequency Divider . . . . .	108
5.4	Discrete Time Mathematical Model of DPLL . . . . .	109
5.5	Z-Domain Analysis of DPLL . . . . .	110
5.6	Classification of DPLL . . . . .	113
5.6.1	Multipliers Type Phase Detector . . . . .	113
5.6.2	Zero-Crossing (ZC) Phase Detector . . . . .	115
5.6.3	Nyquist Rate (NR) Phase Detector . . . . .	116
5.6.4	XOR Phase Detector . . . . .	117
5.6.5	Sequential Phase Detector . . . . .	119
5.6.6	Phase Frequency Detectors. . . . .	121
5.6.7	Hilbert Transform Phase Detector . . . . .	123
5.7	Conclusion. . . . .	125
	References. . . . .	126

<b>6</b>	<b>Synchronization</b>	127
6.1	Introduction	127
6.2	Coherent and Noncoherent Reception	127
6.2.1	Coherent Detection	128
6.2.2	Noncoherent Detection	129
6.3	Carrier Synchronization	131
6.3.1	Closed-Loop Carrier Synchronization	132
6.3.2	Decision Directed Carrier Recovery	135
6.3.3	Pilot Tone-Assisted Phase Synchronizations	135
6.3.4	Pilot Symbol-Assisted Phase Synchronizations	136
6.3.5	Digital Tanlock Loop	136
6.4	Timing or Symbol Synchronization	137
6.4.1	Timing Synchronization Methods for AWGN Channels	137
6.4.2	Synchronous and Nonsynchronous Sampling	139
6.4.3	Feed-Forward and Feedback Estimators	140
6.4.4	Timing Error Detectors	141
6.5	Frame Synchronization	143
6.5.1	Time Gap Synchronization	144
6.5.2	Start and End Flags	145
6.5.3	Packet Length Indication	149
6.5.4	Coding Violations	149
6.6	Conclusion	150
