

Contents

1	Introduction and Preliminaries	1
	Reference	14
2	Some Arithmetic and Analysis in \mathbb{Q}_p; Derivatives in Ultrametric Analysis.	15
	References	22
3	Ultrametric Functional Analysis	23
	References	28
4	Ultrametric Summability Theory.	29
	4.1 Classes of Matrix Transformations	29
	4.2 Steinhaus-Type Theorems	35
	4.3 Core of a Sequence and Knopp's Core Theorem	48
	4.4 A Characterization of Regular and Schur Matrices	52
	4.5 Cauchy Multiplication of Series	59
	References	60
5	The Nörlund and The Weighted Mean Methods	63
	5.1 The Nörlund Method	63
	5.2 Some More Properties of the Nörlund Method	70
	5.3 The Weighted Mean Method	73
	References	88
6	The Euler and The Taylor Methods	89
	References	102
7	Tauberian Theorems	103
	References	114

8 Silverman-Toeplitz Theorem for Double Sequences and Double Series	115
8.1 Double Sequences and Double Series	115
8.2 Silverman-Toeplitz Theorem	116
8.3 Schur's and Steinhaus Theorems	123
8.4 Some Characterizations of 2-Dimensional Schur Matrices	128
References	131
9 The Nörlund Method and The Weighted Mean Method for Double Sequences	133
9.1 The Nörlund Method for Double Sequences.	133
9.2 Cauchy Multiplication of Double Series	135
9.3 The Weighted Mean Method for Double Sequences	139
References	154
Index	157

An Introduction to Ultrametric Summability Theory

Natarajan, P.

2015, XIII, 159 p., Hardcover

ISBN: 978-81-322-2558-4
