

Contents

1	An Introduction to Plasma Physics	1
1.1	Saha's Equation	4
1.2	The Debye Length	5
1.3	Fundamental Plasma Parameters	9
1.4	The Classical Description of Plasmas	14
2	Particle Orbit Theory	17
2.1	Motion in a Uniform, Static Magnetic Field	17
2.2	Motion in Orthogonal Electric and Magnetic Fields	19
2.3	Motion in Slowly Variable Magnetic Fields	24
2.3.1	Charged Particle Orbits in the Presence of a Magnetic Fields with a Weak Gradient	24
2.3.2	Magnetic Moment Conservation	26
2.3.3	Magnetic Mirrors and Magnetic Bottles	29
3	Kinetic Theory of Plasmas: An Outline	37
3.1	The Distribution Function	37
3.2	The Moments of the Distribution Function	41
3.3	Vlasov Equation and Jeans' Theorem	44
4	Fluid Models	49
4.1	The Case of Neutral Gases	49
4.2	The Plasma Case: Two-Fluid Models	56
4.3	The One-Fluid Model	59
5	Magnetohydrodynamics	71
5.1	MHD Equations	71
5.1.1	Magnetic Pressure	77
5.1.2	The Conservative Form of MHD Equations	78

5.2	The Time Evolution of Magnetic Fields.	80
5.2.1	$\mathcal{R}_m \ll 1$: Magnetic Diffusion	81
5.2.2	$\mathcal{R}_m \gg 1$: Alfvén's Theorem.	82
5.3	Equilibrium States of Ideal Plasmas	86
5.3.1	Force-Free Equilibria.	87
5.3.2	Equilibria in the Presence of Magnetic Forces	91
5.4	Perturbed Equilibrium States	94
6	Instabilities.	99
6.1	Linear Stability of Ideal MHD Equilibria.	100
6.2	Instabilities in the Presence of Gravity.	104
6.2.1	Rayleigh-Taylor Instability.	106
6.2.2	Kruskal-Shafranov Instability: $B_0 \neq 0$	109
6.2.3	Parker Instability.	111
6.2.4	Instabilities in the Presence of Plasma Flows: Kelvin-Helmholtz Instability.	122
6.3	Instabilities in Cylindrical Geometry	130
6.3.1	Instability of a Plasma Column.	130
6.3.2	The Confinement of Solar Coronal Loops	138
6.3.3	The Magnetorotational Instability (MRI)	143
7	Waves	149
7.1	The Fourier Representation	150
7.1.1	Phase Velocity and Group Velocity.	154
7.2	Waves in the Ideal MHD Regime.	155
7.2.1	Magnetic Waves.	156
7.2.2	Magnetosonic Waves.	158
7.3	Fluid Waves Beyond the MHD Regime.	161
7.3.1	Intermediate Frequencies: $\omega \lesssim \omega_{ce}$	161
7.4	Waves in Kinetic Regimes: The Case of Landau Damping.	167
8	Shocks	181
8.1	The Jump Conditions	184
8.1.1	Contact Discontinuities	186
8.1.2	Rotational Discontinuities	187
8.2	MHD Shocks	189
8.2.1	Perpendicular Shocks	189
8.2.2	Parallel Shocks.	192
8.2.3	Oblique Shocks	193
8.3	Shock Thickness.	198
8.4	Collisionless Shocks	200

9	Magnetic Reconnection	203
9.1	Driven Reconnection	209
9.1.1	The Sweet-Parker Model	210
9.1.2	An Outline of the Petscheck Model	214
9.2	Spontaneous Reconnection	216
9.2.1	Tearing Mode Instability	217
9.2.2	The Plasmoid Instability of Thin Current Sheets	224
10	MHD Turbulence	229
10.1	Homogeneous and Isotropic Hydrodynamical Turbulence	231
10.2	Magnetohydrodynamic Turbulence	235
10.3	Turbulence and Coronal Heating	239
11	Build-Up of Magnetic Fields	247
11.1	The Dynamo Problem	247
11.2	The Anti-Dynamo Theorems	249
11.3	Phenomenological Theory of Astrophysical Dynamos	252
11.3.1	The Generation of Toroidal Fields from Poloidal Ones	253
11.3.2	The Generation of Poloidal Fields from Toroidal Ones	255
11.4	Mean-field Electrodynamics	258
11.4.1	Simple Solutions of the Dynamo Equations	263
11.5	The Creation of Magnetic Fields	271
	References	275
	Index	277

Basics of Plasma Astrophysics

Chiuderi, C.; Velli, M.

2015, IX, 279 p. 37 illus., Hardcover

ISBN: 978-88-470-5279-6
