

Contents

1	Electron Distributions and Crystalline Structures	1
1.1	Introduction	1
1.2	The Electrons in Atoms	2
1.2.1	Energy Levels and Wavefunctions	2
1.2.2	Quantum Numbers and Configurations	2
1.2.3	Electrostatic and Spin–Orbit Interactions, Couplings	3
1.2.4	The 4f and 5f Shells-Lanthanides and Actinides	5
1.2.5	“Collapse” of the 4f Shell Wave functions	5
1.3	Electrons in Solids	7
1.3.1	Energy Distributions of the Valence Electrons	8
1.3.2	Models for Weakly Correlated Electrons	10
1.3.3	The Electron Correlations	14
1.3.4	The s, p, d Densities of States	26
1.3.5	4f Distributions in Rare-Earths	29
1.3.6	The 5f Distributions in Actinides	42
1.3.7	Conclusion	52
1.4	Crystalline Structures	53
1.4.1	Crystal Structure of Rare-Earths	55
1.4.2	Pressure Effect on the Rare-Earths	61
1.4.3	Crystal Structure of the Actinides	66
1.4.4	Pressure Effect on the Actinides	71
1.4.5	Conclusion	73
	References	74
2	Electron Distributions and Physicochemical Properties	79
2.1	Rare-Earth Compounds	79
2.1.1	Oxides	87
2.1.2	Chalcogenides	93
2.1.3	Pnictides	101
2.1.4	Intermetallics	110

2.2	Actinide Compounds	134
2.2.1	Oxides	135
2.2.2	Monochalcogenides	138
2.2.3	Mononitrides and Monocarbides	139
2.2.4	Intermetallics	140
	References	149
3	High Energy Spectroscopy and Resonance Effects	159
3.1	Basic Principles	159
3.2	Resonance Effects in the 3d Range	165
3.2.1	X-ray Photoabsorption	166
3.2.2	Electron-Stimulated X-ray Emission (EXES).	172
3.2.3	Electron-Stimulated Auger Transitions	184
3.2.4	Theoretical Calculations of the X-ray and Auger Spectra.	187
3.2.5	Lanthanum 3d Excited Configurations	190
3.3	Resonance Effects in the 4d Range	193
3.3.1	4d Photoabsorption	194
3.3.2	Electron-Stimulated X-ray Emission.	198
3.3.3	Electron-Stimulated 4d Auger Spectra	201
3.3.4	Theoretical 4d Spectra	203
3.3.5	Characteristics of 4d Excited Configuration.	205
3.4	Different Characterizations of the Unoccupied Levels	206
3.4.1	L_{III} Photoabsorption.	207
3.4.2	Electron Energy Loss Spectroscopy (EELS)	208
3.4.3	Isochromat Spectroscopy	210
3.4.4	Inverse Photoemission Spectroscopy (IPS)	214
3.4.5	X-ray Anomalous Scattering	215
3.5	Different Characterizations of Occupied Levels	215
3.5.1	Photoemission.	215
3.5.2	Inelastic X-ray Scattering	223
3.5.3	Auger Raman Scattering.	235
3.6	Conclusion	238
	References	240
4	Rare-Earth Spectroscopy	245
4.1	Introduction	245
4.2	Trivalent Rare-Earths	249
4.2.1	Density of Unoccupied States	250
4.2.2	Density of Occupied States.	258
4.2.3	Core Levels	282
4.3	Mixed-Valence Rare-Earths.	288
4.3.1	Density of Unoccupied States	290
4.3.2	Density of Occupied States.	300

4.4	Conclusion	316
	References	318
5	Actinide Spectroscopy	327
5.1	Introduction	327
5.2	Density of Unoccupied States	329
5.2.1	X-ray Absorption	329
5.2.2	Electron Energy Loss Spectroscopy (EELS)	334
5.2.3	BIS and IPES	338
5.3	Density of Valence States	338
5.3.1	X-ray Emission	338
5.3.2	Photoemission	347
5.4	Core Levels	360
5.4.1	X-ray Photoelectron Spectroscopy (XPS)	360
5.4.2	Resonant Auger Emission	367
5.5	Conclusion	368
	References	370
	Subject Index	375
	Chemical Index	379

Rare-Earths and Actinides in High Energy Spectroscopy

Bonnelle, C.; Spector, N.

2015, XVII, 380 p. 120 illus., 107 illus. in color.,

Hardcover

ISBN: 978-90-481-2878-5
