1	Model Purpose	1
1.1	Modelling for Comfort?	2
1.2	Models for Visualisation Alone	3
1.3	Models for Volumes	4
1.4	Models as a Front End to Simulation	5
1.5	Models for Well Planning	5
1.6	Models for Seismic Modelling	6
1.7	Models for IOR	6
1.8	Models for Storage	9
1.9	The Fit-for-Purpose Model	9
	References	12
2	The Rock Model	13
2.1	Rock Modelling	14
2.2	Model Concept	16
2.3	The Structural and Stratigraphic Framework	17
2.3.1	Structural Data	17
2.3.2	Stratigraphic Data	18
2.4	Model Elements	22
2.4.1	Reservoir Models Not Geological Models	22
2.4.2	Building Blocks	22
2.4.3	Model Element Types	22
2.4.4	How Much Heterogeneity to Include?	25
2.5	Determinism and Probability	28
2.5.1	Balance Between Determinism and Probability	29
2.5.2	Different Generic Approaches	31
2.5.3	Forms of Deterministic Control	31
2.6	Essential Geostatistics	34
2.6.1	Key Geostatistical Concepts	34
2.6.2	Intuitive Geostatistics	39
2.7	Algorithm Choice and Control	44
2.7.1	Object Modelling	44
2.7.2	Pixel-Based Modelling	47
2.7.3	Texture-Based Modelling	50
2.7.4	The Importance of Deterministic Trends	51

2.7.5	Alternative Rock Modelling Methods – A Comparison	54
2.8	Summary	56
2.8.1	Sense Checking the Rock Model	57
2.8.2	Synopsis – Rock Modelling Guidelines	58
	References	59
3	The Property Model	61
3.1	Which Properties?	62
3.2	Understanding Permeability	66
3.2.1	Darcy’s Law	66
3.2.2	Upscaled Permeability	67
3.2.3	Permeability Variation in the Subsurface	69
3.2.4	Permeability Averages	69
3.2.5	Numerical Estimation of Block Permeability	71
3.2.6	Permeability in Fractures	73
3.3	Handling Statistical Data	74
3.3.1	Introduction	74
3.3.2	Variance and Uncertainty	76
3.3.3	The Normal Distribution and Its Transforms	78
3.3.4	Handling ϕ -k Distributions and Cross Plots	81
3.3.5	Hydraulic Flow Units	84
3.4	Modelling Property Distributions	85
3.4.1	Kriging	85
3.4.2	The Variogram	86
3.4.3	Gaussian Simulation	86
3.4.4	Bayesian Statistics	88
3.4.5	Property Modelling: Object-Based Workflow	88
3.4.6	Property Modelling: Seismic-Based Workflow	90
3.5	Use of Cut-Offs and N/G Ratios	93
3.5.1	Introduction	93
3.5.2	The Net-to-Gross Method	95
3.5.3	Total Property Modelling	96
3.6	Vertical Permeability and Barriers	101
3.6.1	Introduction to k_v/k_h	101
3.6.2	Modelling Thin Barriers	102
3.6.3	Modelling of Permeability Anisotropy	103
3.7	Saturation Modelling	105
3.7.1	Capillary Pressure	105
3.7.2	Saturation Height Functions	106
3.7.3	Tilted Oil-Water Contacts	107
3.8	Summary	110
	References	111
4	Upscaling Flow Properties	115
4.1	Multi-scale Flow Modelling	116
4.2	Multi-phase Flow	118
4.2.1	Two-Phase Flow Equations	118
4.2.2	Two-Phase Steady-State Upscaling Methods	123
4.2.3	Heterogeneity and Fluid Forces	127

4.3	Multi-scale Geological Modelling Concepts	129
4.3.1	Geology and Scale	129
4.3.2	How Many Scales to Model and Upscale?	131
4.3.3	Which Scales to Focus On? (The REV)	134
4.3.4	Handling Variance as a Function of Scale	137
4.3.5	Construction of Geomodel and Simulator Grids	141
4.3.6	Which Heterogeneities Matter?	143
4.4	The Way Forward	145
4.4.1	Potential and Pitfalls	145
4.4.2	Pore-to-Field Workflow	146
4.4.3	Essentials of Multi-scale Reservoir Modelling	146
	References	147
5	Handling Model Uncertainty	151
5.1	The Issue	152
5.1.1	Modelling for Comfort	152
5.1.2	Modelling to Illustrate Uncertainty	152
5.2	Differing Approaches	156
5.3	Anchoring	159
5.3.1	The Limits of Rationalism	159
5.3.2	Anchoring and the Limits of Geostatistics	159
5.4	Scenarios Defined	160
5.5	The Uncertainty List	161
5.6	Applications	161
5.6.1	Greenfield Case	161
5.6.2	Brownfield Case	163
5.7	Scenario Modelling – Benefits	165
5.8	Multiple Model Handling	166
5.9	Linking Deterministic Models with Probabilistic Reporting	167
5.10	Scenarios and Uncertainty-Handling	170
	References	171
6	Reservoir Model Types	173
6.1	Aeolian Reservoirs	174
6.1.1	Elements	175
6.1.2	Effective Properties	175
6.1.3	Stacking	178
6.1.4	Aeolian System Anisotropy	179
6.1.5	Laminae-Scale Effects	180
6.2	Fluvial Reservoirs	181
6.2.1	Fluvial Systems	181
6.2.2	Geometry	181
6.2.3	Connectivity and Percolation Theory	182
6.2.4	Hierarchy	186
6.3	Tidal Deltaic Sandstone Reservoirs	186
6.3.1	Tidal Characteristics	186
6.3.2	Handling Heterolithics	187

6.4	Shallow Marine Sandstone Reservoirs	189
6.4.1	Tanks of Sand?	189
6.4.2	Stacking and Laminations	190
6.4.3	Large-Scale Impact of Small-Scale Heterogeneities	190
6.5	Deep Marine Sandstone Reservoirs	193
6.5.1	Confinement	193
6.5.2	Seismic Limits	194
6.5.3	Thin Beds	195
6.5.4	Small-Scale Heterogeneity in High Net-to-Gross ‘Tanks’	197
6.5.5	Summary	198
6.6	Carbonate Reservoirs	199
6.6.1	Depositional Architecture	201
6.6.2	Pore Fabric	202
6.6.3	Diagenesis	205
6.6.4	Fractures and Karst	205
6.6.5	Hierarchies of Scale – The Carbonate REV	207
6.6.6	Conclusion: Forward-Modelling or Inversion? . .	210
6.7	Structurally-Controlled Reservoirs	211
6.7.1	Low Density Fractured Reservoirs (Fault-Dominated)	211
6.7.2	High Density Fractured Reservoirs (Joint-Dominated)	220
6.8	Fit-for-Purpose Recapitulation	227
	References	228
7	Epilogue	233
7.1	The Story So Far	234
7.2	What’s Next?	236
7.2.1	Geology – Past and Future	236
7.3	Reservoir Modelling Futures	238
