## Part I An Introduction to Nonstandard Analysis

<b>1</b>	<b>Simple Nonstandard Analysis and Applications</b> . . . . .	<b>3</b>
	Peter A. Loeb	
1.1	Introduction . . . . .	3
1.2	A Simple Construction of a Nonstandard Number System . . . .	7
1.3	A Simple Language . . . . .	11
1.4	Interpretation of the Language $L$ . . . . .	12
1.5	Transfer Principle for ${}^*\mathbb{R}$ . . . . .	15
1.6	The Nonstandard Real Numbers . . . . .	18
1.7	Sequences . . . . .	23
1.8	Topology on the Reals . . . . .	26
1.9	Limits and Continuity . . . . .	28
1.10	Differentiation . . . . .	30
1.11	Riemann Integration . . . . .	32
	References. . . . .	35
<b>2</b>	<b>An Introduction to General Nonstandard Analysis</b> . . . . .	<b>37</b>
	Peter A. Loeb	
2.1	Superstructures . . . . .	37
2.2	Language for Superstructures . . . . .	38
2.3	Interpretation of the Language for Superstructures. . . . .	39
2.4	Monomorphisms and the Transfer Principle . . . . .	41
2.5	Ultrapower Construction of Superstructures and Monomorphisms. . . . .	44
2.6	Special Index Sets Yielding Enlargements . . . . .	50
2.7	A Result in Infinite Graph Theory . . . . .	52
2.8	Internal and External Sets . . . . .	53
2.9	Saturation . . . . .	58
	References. . . . .	78

<b>3</b>	<b>Topology and Measure Theory . . . . .</b>	<b>79</b>
	Peter A. Loeb	
3.1	Metric and Topological Spaces . . . . .	79
3.2	Continuous Mappings . . . . .	83
3.3	Convergence . . . . .	83
3.4	More on Topologies . . . . .	84
3.5	Compact Spaces . . . . .	85
3.6	Product Spaces . . . . .	88
3.7	Relative Topologies . . . . .	88
3.8	Uniform Continuity and Uniform Spaces . . . . .	89
3.9	Nonstandard Hulls . . . . .	92
3.10	Compactifications . . . . .	93
3.11	The Base and Antibase Operators . . . . .	93
3.12	Measure and Probability Theory . . . . .	97
	3.12.1 The Martingale Convergence Theorem . . . . .	99
	3.12.2 Representing Measures in Potential Theory . . . . .	101
	References. . . . .	103

## Part II Functional Analysis

<b>4</b>	<b>Banach Spaces and Linear Operators . . . . .</b>	<b>107</b>
	Manfred P.H. Wolff	
4.1	Introduction . . . . .	107
4.2	Basic Nonstandard Analysis of Normed Spaces . . . . .	108
	4.2.1 Internal Normed Spaces and Their Nonstandard Hull . . . . .	108
	4.2.2 Standard Continuous and Internal S-continuous Linear Operators. . . . .	114
	4.2.3 Special Banach Spaces and Their Nonstandard Hulls. . . . .	116
	4.2.4 Notes . . . . .	119
4.3	Advanced Theory of Banach Spaces . . . . .	119
	4.3.1 A Brief Excursion to Locally Convex Vector Spaces . . . . .	119
	4.3.2 General Banach Spaces . . . . .	124
	4.3.3 Banach Lattices . . . . .	130
	4.3.4 Notes . . . . .	133
4.4	Elementary Theory of Linear Operators . . . . .	133
	4.4.1 Compact Operators . . . . .	133
	4.4.2 Fredholm Operators . . . . .	135
	4.4.3 Notes . . . . .	137
4.5	Spectral Theory of Operators . . . . .	137
	4.5.1 Basic Definitions and Facts . . . . .	137

4.5.2	The Spectrum of an $S$ -bounded Internal Operator . . . .	139
4.5.3	The Spectrum of Compact Operators and the Essential Spectrum . . . . .	141
4.5.4	Closed Operators and Pseudoresolvents . . . . .	142
4.5.5	Notes . . . . .	144
4.6	Selected Applications . . . . .	145
4.6.1	Strongly Continuous Semigroups . . . . .	145
4.6.2	Approximation of Operators and of Their Spectra . . . .	147
4.6.3	Super Properties . . . . .	152
4.6.4	The Fixed Point Property . . . . .	155
4.6.5	References to Further Applications of Nonstandard Analysis To operator Theory . . . . .	158
4.6.6	Notes . . . . .	158
	References. . . . .	159

### Part III Compactifications

<b>5</b>	<b>General and End Compactifications.</b> . . . .	165
	Matt Insall, Peter A. Loeb and Małgorzata Aneta Marciniak	
5.1	Introduction . . . . .	165
5.2	General Compactifications . . . . .	167
5.3	End Compactifications. . . . .	170
5.4	Product Spaces . . . . .	174
	References. . . . .	176

### Part IV Measure and Probability Theory

<b>6</b>	<b>Measure Theory and Integration.</b> . . . .	179
	Horst Osswald	
6.1	Introduction . . . . .	179
6.2	Loeb Measures . . . . .	182
6.2.1	Loeb Measure Spaces . . . . .	182
6.2.2	Loeb Measures over Gaussian Measures . . . . .	185
6.2.3	Loeb Measurable Functions . . . . .	186
6.2.4	Loeb Spaces over the Product of Internal Spaces . . . .	188
6.2.5	The Hyperfinite Time Line $T$ . . . . .	189
6.2.6	Lebesgue Measure as a Counting Measure . . . . .	190
6.2.7	Adapted Loeb Spaces . . . . .	195
6.3	Standard Integrability for Internal Measures . . . . .	197
6.3.1	The Definition of $S$ -integrability and Equivalent Conditions . . . . .	197

6.3.2	$\mu_L$ -integrability and $S_\mu$ -integrability . . . . .	200
6.3.3	Integrable Functions defined on $\mathbb{N}^n \times \Lambda \times [0, \infty[^m$ . . .	205
6.3.4	Standard Part of the Conditional Expectation . . . . .	210
6.3.5	Characterization of $S$ -integrability . . . . .	211
6.3.6	Keisler's Fubini Theorem . . . . .	213
6.3.7	Hyperfinite Representation of the Tensor Product . . . .	217
6.3.8	On Symmetric Functions . . . . .	220
6.4	Internal and Standard Martingales . . . . .	222
6.4.1	Stopping Times and Doob's Upcrossing Result. . . . .	223
6.4.2	The Maximum Inequality. . . . .	224
6.4.3	Doob's Inequality . . . . .	224
6.4.4	The Burkholder Davis Gundy Inequalities . . . . .	225
6.4.5	$S$ -integrability of Internal Martingales . . . . .	225
6.4.6	$S$ -continuity of Internal Martingales. . . . .	226
6.4.7	The Standard Part of Internal Martingales . . . . .	226
	References. . . . .	230
<b>7</b>	<b>Stochastic Analysis . . . . .</b>	<b>233</b>
	Horst Osswald	
7.1	Introduction . . . . .	233
7.2	The Itô Integral for the Brownian Motion . . . . .	237
7.2.1	The $S$ -Continuity of the Internal Integral . . . . .	238
7.2.2	The $S$ -Square-Integrability of the Internal Itô Integral. . . . .	243
7.2.3	Adaptedness and Predictability . . . . .	245
7.2.4	The Standard Itô Integral . . . . .	247
7.2.5	Integrability of the Itô Integral . . . . .	248
7.2.6	The Wiener Measure . . . . .	250
7.3	The Iterated Integral . . . . .	252
7.3.1	The Definition of the Iterated Integral . . . . .	252
7.3.2	On Products of Iterated Integrals. . . . .	256
7.3.3	The Continuity of the Standard Iterated Integral Process . . . . .	259
7.3.4	The $\mathcal{W}_{C_{\mathbb{H}}}$ -Measurability of the Iterated Itô Integral . .	260
7.3.5	$I_n^M(f)$ is a Continuous Version of the Standard Part of $I_n^M(F)$ . . . . .	262
7.3.6	Continuous Versions of Iterated Integral Processes . .	263
7.4	Beginning of Malliavin Calculus. . . . .	264
7.4.1	Chaos Decomposition . . . . .	265
7.4.2	A Lifting Theorem for Functionals in $L^2_{\mathcal{W}}(\Gamma_L)$ . . . .	270
7.4.3	Computation of the Kernels . . . . .	271
7.4.4	The Kernels of the Product of Wiener Functionals . .	273
7.4.5	The Malliavin Derivative . . . . .	276

7.4.6	A Commutation Rule for Derivative and Limit . . . . .	277
7.4.7	The Clark-Ocone Formula . . . . .	278
7.4.8	A Lifting Theorem for the Derivative . . . . .	280
7.4.9	The Skorokhod Integral . . . . .	281
7.4.10	Product and Chain Rules for the Malliavin Derivative . . . . .	284
7.5	Stochastic Integration for Symmetric Poisson Processes . . . . .	288
7.5.1	Orthogonal Increments. . . . .	288
7.5.2	From Internal Random Walks to the Standard Poisson Integral . . . . .	290
7.5.3	Iterated Integrals . . . . .	293
7.5.4	Multiple Integrals . . . . .	297
7.5.5	The $\sigma$ -Algebra $\mathcal{D}$ generated by the Wiener-Lévy Integrals . . . . .	298
7.6	Malliavin Calculus for Poisson Processes . . . . .	302
7.6.1	Chaos . . . . .	302
7.6.2	Malliavin Derivative . . . . .	305
7.6.3	Exchange of Derivative and Limit. . . . .	306
7.6.4	The Clark-Ocone Formula . . . . .	307
7.6.5	The Skorokhod Integral . . . . .	309
7.6.6	Smooth Representations. . . . .	310
7.6.7	The Product Rule . . . . .	311
7.6.8	The Chain Rule . . . . .	315
	References. . . . .	317
<b>8</b>	<b>New Understanding of Stochastic Independence . . . . .</b>	<b>321</b>
	Yeneng Sun	
8.1	The General Context . . . . .	321
8.2	The Specific Problems. . . . .	322
8.3	Difficulties in the Classical Framework . . . . .	324
8.4	The Resolution . . . . .	326
8.5	Exact Law of Large Numbers. . . . .	327
8.6	Converse Law of Large Numbers . . . . .	330
8.7	Almost Equivalence of Pairwise and Mutual Independence . . . . .	332
8.8	Duality of Independence and Exchangeability. . . . .	336
8.9	Grand Unification of Multiplicative Properties . . . . .	338
8.10	Discrete Interpretations . . . . .	340
8.11	Notes . . . . .	343
	References. . . . .	344

## Part V Economics and Nonstandard Analysis

<b>9</b>	<b>Nonstandard Analysis in Mathematical Economics . . . . .</b>	<b>349</b>
	Yeneng Sun	
9.1	Introduction . . . . .	349
9.2	Distribution and Integration of Correspondences . . . . .	356
9.2.1	Distribution of Correspondences . . . . .	356
9.2.2	Integration of Correspondences . . . . .	361
9.3	Nash Equilibria in Games with Many Players. . . . .	363
9.3.1	General Existence of Nash Equilibria in the Loeb Setting . . . . .	364
9.3.2	Nonexistence of Nash Equilibria in the Lebesgue Setting . . . . .	365
9.4	Nash Equilibria in Finite Games with Incomplete Information . . . . .	368
9.4.1	Nonexistence of Nash Equilibria for Games with Information. . . . .	368
9.4.2	Approximate Nash Equilibria for Large Finite Games and Idealizations . . . . .	370
9.4.3	General Existence of Nash Equilibria for Games with Information. . . . .	373
9.5	Exact Law of Large Numbers and Independent Set-Valued Processes . . . . .	375
9.6	Competitive Equilibria in Random Economies . . . . .	380
9.7	General Risk Analysis and Asset Pricing . . . . .	383
9.7.1	General Risk Analysis for Large Markets. . . . .	383
9.7.2	The Equivalence of Exact No Arbitrage and APT Pricing. . . . .	388
9.8	Independent Universal Random Matching . . . . .	389
9.9	Notes . . . . .	392
	References. . . . .	396

## Part VI Combinatorial Number Theory

<b>10</b>	<b>Density Problems and Freiman's Inverse Problems . . . . .</b>	<b>403</b>
	Renling Jin	
10.1	Introduction . . . . .	403
10.2	Applications to Density Problems . . . . .	405
10.2.1	Sumset Phenomenon . . . . .	407
10.2.2	Plünnecke Type of Inequalities for Densities . . . . .	411
10.3	Applications to Freiman's Inverse Problems . . . . .	417
10.3.1	Freiman's Inverse Problem for Cuts . . . . .	419
10.3.2	Freiman's $3 A  - 3 + b$ Conjecture . . . . .	432

10.3.3	Freiman's Inverse Problem for Upper Asymptotic Density. . . . .	439
	References. . . . .	440
<b>11</b>	<b>Hypersnatural Numbers as Ultrafilters . . . . .</b>	<b>443</b>
	Mauro Di Nasso	
11.1	Introduction . . . . .	443
11.2	The $u$ -equivalence. . . . .	445
11.3	Hausdorff S-topologies and Hausdorff Ultrafilters. . . . .	450
11.4	Regular and Good Ultrafilters. . . . .	454
11.5	Ultrafilters Generated by Pairs . . . . .	458
11.6	Hyper-Shifts. . . . .	462
11.7	Nonstandard Characterizations in the Space $(\beta\mathbb{N}, \oplus)$ . . . . .	466
11.8	Idempotent Ultrafilters. . . . .	468
11.9	Final Remarks and Open Questions. . . . .	471
	References. . . . .	473
	<b>Index . . . . .</b>	<b>475</b>

Nonstandard Analysis for the Working Mathematician

Loeb, P.; Wolff, M.P.H. (Eds.)

2015, XV, 481 p., Hardcover

ISBN: 978-94-017-7326-3
