Contents

1 Introduction **1**
1.1 Formulation and Formalisation of the Problem 1
1.2 The Problems Analyzed in the Book 5
1.3 Summary 6
References 7

Part I Analysis, Modeling, Model Fitting and Verification

2 Analysis & Modeling **11**
2.1 Introduction 11
2.2 Analysis 12
2.3 Modeling 13
2.3.1 Unidirectional Transitions 13
2.3.2 Feedback 15
2.3.3 Non-Temporary Action of External Stimuli on the Transitions 16
2.4 Preparation of the Data Set to Compare It with the Model 18
2.5 Discussion 19
2.6 Conclusions 22
References 22

3 Model Fitting & Verification **23**
3.1 Introduction 23
3.2 Model Fitting (Comparing the Model with Experimental Data) 26
3.3 Verification (Further Comparing) 26
3.4 Discussion 29
3.5 Conclusions 30
References 31

Part II The Processes

4 Transitions **35**
4.1 Introduction 35
4.2 Transitions 36
4.2.1 Unidirectional Single-Step Transitions 36
4.2.2 Ion Leakage via Cellular Membranes 38
4.2.3 Unidirectional Multi-Step Transitions 39
4.2.4 Simple Bi-Directional Transitions 42
4.3 Discussion 43
References 44

5 Non-Controlled Ion Fluxes Between Cellular Compartments 45
5.1 Introduction 45
5.2 Modeling 46
5.3 Discussion 49
5.3.1 Intra-Cellular Calcium Re-Distribution 50
5.3.2 Possible Mechanisms and Pathways of the Fluxes not Considered Here 51
References 52

6 Controlled Ion Fluxes Between Cellular Compartments 53
6.1 Introduction 53
6.2 Modeling 54
6.2.1 Choride Efflux via the Exchanger 54
6.2.2 Calcium Extrusion from the Cytosol of Platelets 55
6.3 Discussion 57
References 58

7 Growth and Decline of Microbial Populations 59
7.1 Introduction 59
7.2 General Considerations and Simplest Models 61
7.2.1 Analysis of the Rate of Change in Population Size 62
7.2.2 Further Change in Population Size 64
7.2.3 Mathematical Models and Model Comparing with Experimental Data 64
7.3 Discussion, Model Modifications and Further Fitting 68
7.4 Conclusions 77
Appendix A 78
References 78

Part III Non-Temporal Dependences

8 (Bio)Chemical Kinetics 83
8.1 Introduction 83
8.2 Modeling 84
8.2.1 One Ligand (Model A) 84
8.2.2 Two Ligands 85
8.3 Discussion 87
8.3.1 Two Ligands. The Ternary Complex 89
8.3.2 Two Ligands. Three-States Models of the Transitions 90
8.4 Conclusions 93
References 93

9 Non-Classical (Bio)Chemical Kinetics not Requiring Multitude of Structural Ligand-Binding Sites 95
9.1 Introduction 95
9.2 Modelling and Analysis 97
9.2.1 Main Assumptions 97
9.2.2 No Restrictions Imposed on Ligand Concentration 98

9.2.3 High Ligand Concentration 99
9.2.3.1 Formal Model 99
9.2.3.2 Model Based on Recovery 100
9.3 Model Analysis 101
9.3.1 Model A 101
9.3.2 Models B and C 102
9.3.2.1 Enzyme Kinetics 104
9.3.2.2 Receptor Kinetics 106
9.3.2.3 Ligand-Binding Site(s) 107
9.3.2.4 Implications of the Model 108
9.4 Conclusions 108
References 108

10 The Deviations from Classical Kinetics Determined by Multitude of Binding Sites 111
10.1 Introduction 111
10.2 General Considerations 112
10.2.1 Conformational States of the (Macro)molecule, Transitions and Dose–response 112
10.2.2 Main Assumptions 114
10.3 Modelling and Analysis 114
10.4 Discussion 116
10.4.1 Comparing Model A_1 and Model A_2 116
10.4.2 Model A_1, Model A_2 and the Hill Equation 120
10.4.3 Efficacies Different from m/n 121
10.5 Conclusions 122
References 123
Appendix A 124
Appendix B 126
Appendix C 127
Appendix D 127
Appendix E 128

Part IV Concluding

11 Analysis of the Progress of Enzyme-Catalyzed Reaction 131
11.1 Introduction 131
11.2 Results (General Considerations and Modeling) 133
11.2.1 Quasi-Stationary Model 133
11.2.2 Product Accumulation 134
11.2.2.1 Inhibition by the Reaction Product 135
11.2.2.2 Approximations at Low Product Concentration 135
11.2.2.3 Single-Turnover Approach (Approximation at Low Initial Substrate Concentration) 137
11.2.3 Two Reaction Products 138
11.3 Discussion (Model Analysis and Further Modeling) 139

11.3.1 Comparing of Approximate Models with Experimental Data 141
11.3.2 Selectivity of the Enzyme 142
11.3.3 Parameter Estimation 143
11.4 Conclusions 145
Appendix A 145
References 146

12 Oscillations in Size of Interacting Biological Populations 149
12.1 Introduction 149
12.2 General Considerations and Modeling 150
12.2.1 Main Assumptions 150
12.2.2 Modeling 150
12.3 Problems Concerning the Classical Model, its Modifications and Model Comparing with Observational Data 151
12.3.1 The Interdependence 152
12.3.2 Resource Dependence and That of the Ratio 154
12.4 Modification of the Classical Model 155
12.5 Discussion 156
References 157

13 General Discussion and Conclusions 159
13.1 Introduction 159
13.2 Analysis 159
13.3 Presentation 162
13.4 Conclusions 164
References 164
