Part I Conditional QTL Mapping and Their Applications to Wheat Breeding and Cultivation

1	Concept and Research Contents of Conditional QTL Mapping. . . .	3
1.1	Concept of Conditional QTL and Differences Between the Conditional QTL and Unconditional QTL	3
1.1.1	Concept of Conditional QTL Mapping	3
1.1.2	Differences Between the Conditional QTL and Unconditional QTL	4
1.2	Contents of Conditional QTL Analysis	5
1.2.1	Conditional QTL Mapping for Developmental Dynamic Genetic Effects	5
1.2.2	Conditional QTL Mapping for Associated Traits Genetic Effects.	9
1.2.3	Conditional QTL Mapping for Agronomic Measure Coupling Genetic Effects.	11
	References	13
2	Conditional QTL Mapping of Major Quality Traits.	15
2.1	Conditional QTL Mapping for Protein Dynamic Accumulation Pattern in Wheat Grain.	15
2.1.1	Materials and Methods	15
2.1.2	Result and Analysis	17
2.1.3	Comparison with Previous Researches	20
2.2	Conditional QTL Mapping for Developmental Behavior of Total Starch and Its Components Content in Wheat Grain	24
2.2.1	Materials and Methods	24
2.2.2	Result and Analysis	26
2.2.3	Comparson of the Results with Ones of Previous Studies	38

2.3	Conditional QTL Mapping for Protein and Starch Interaction in Wheat Grain	40
2.3.1	Materials and Methods	40
2.3.2	Result and Analysis	43
2.3.3	Comparison of the Results with Ones of Previous Studies	48
2.4	Conditional QTL Mapping for Sedimentation Values on Seven Quality Traits in Common Wheat.	49
2.4.1	Materials and Methods	50
2.4.2	Result and Analysis	51
2.4.3	Comparison of the Results with the Previous Studies	58
2.5	Genetic Analysis of Wheat Four Whiteness Conducted Through Conditional and Unconditional QTL Mappings	58
2.5.1	Materials and Methods	59
2.5.2	Result and Analysis	61
2.6	Epistatic Effects of Unconditional and Conditional QTL Mapping of Flour Whiteness	66
2.6.1	Comparison of the Results with the Previous Studies	68
2.7	Conditional QTL Mapping for Wheat Seed Protein-Fraction Contents at Different Developmental Stages.	70
2.7.1	Materials and Methods	70
2.7.2	Result and Analysis	72
2.7.3	Comparison of the Results with the Previous Studies	85
	References	86
3	Conditional QTL Mapping of Wheat Main Yield Traits.	89
3.1	Conditional QTL Mapping for Wheat Canopy Traits Under Two Nitrogen Application Levels.	89
3.1.1	Materials and Methods	90
3.1.2	Result and Analysis	91
3.1.3	Comparison of the Results with the Previous Studies	98
3.2	Conditional QTL Mapping for Plant Height at Different Developmental Stages.	98
3.2.1	Materials and Methods	99
3.2.2	Result and Analysis	100
3.2.3	Comparison of the Results with Ones of Previous Studies	105
3.3	Conditional QTL Mapping for Wheat Spike Dry Weight and Thousand-Kernel Weight at Different Developmental Stages.	106

3.3.1	Materials and Methods	106
3.3.2	Result and Analysis	108
3.3.3	Comparison of the Results with Previous Studies	119
3.4	Conditional QTL Mapping for Wheat Kernels Weight per Spike at Different Developmental Stages	120
3.4.1	Materials and Methods	120
3.4.2	Result and Analysis	121
3.4.3	Comparison of the Results with Ones of Previous Studies	126
3.5	Conditional QTL Mapping for Wheat Grain Yield per Plant at Different Developmental Stages	126
3.5.1	Materials and Methods	127
3.5.2	Result and Analysis	127
3.5.3	Comparison of the Results with Ones of Previous Studies	132
3.6	Conditional QTL Mapping for Wheat Kernel Weight-Related Traits in Multiple Genetic Background	133
3.6.1	Materials and Methods	133
3.6.2	Result and Analysis	135
3.6.3	Comparison of the Results with the Previous Studies	139
3.7	Conditional QTL Mappings Among Three Key Yield Components in Common Wheat.	144
3.7.1	Materials and Methods	145
3.7.2	Result and Analysis	146
3.7.3	Comparison of the Results with the Previous Studies	161
3.8	Conditional QTL Mapping for Yield and Its Three Components in Common Wheat.	162
3.8.1	Results of Conditional QTL Analysis on the Yield and Main Yield Components	162
3.8.2	Result and Analysis	163
3.8.3	Comparison of the Results with Previous Studies	167
	References	168
4	Roles of Conditional QTL in Crop Breeding and Cultivation	173
4.1	Applications of Conditional QTL Mapping to Crop Molecular Breeding	173
4.2	Applications of Conditional QTL Mapping to Crop Molecular Cultivation	174
4.3	Issues and Application Prospects of Conditional QTL Analysis	175
	References	176

Part II Molecular Marker-Assisted Breeding in Wheat

5	The Concept and Research Progress of MAS	179
5.1	Concept and Importance of Molecular Marker-Assisted Breeding	180
5.1.1	The Concept and Features of MAS	180
5.1.2	The Importance of MAS	181
5.2	Research Progress of the Molecular Marker-Assisted Breeding	182
5.2.1	International Research Progress of Molecular Marker-Assisted Breeding	182
5.2.2	Inland Research Progress of Molecular Marker-Assisted Breeding	183
	References	185
6	Exploration of Molecular Markers and Creation of Molecular Breeding Elements	187
6.1	Exploration of Molecular Markers	187
6.1.1	Development Methods of Molecular Markers	187
6.1.2	Types and Features of Molecular Markers	188
6.1.3	The Widely Used Molecular Markers and Their Development Methods	190
6.1.4	DNA Markers Based on Restriction Enzyme Digestion and PCR	200
6.1.5	DNA Markers Based on Single Nucleotide Polymorphisms (SNP)	202
6.2	Examples of Molecular Markers' Development	206
6.2.1	The Detection Primers of Molecular Marker Closely Linked with the Main QTL of Wheat Spike Length and Its Application	206
6.2.2	Development of Molecular Marker <i>QGW4B.4-CAPS</i> Related Thousand Kernel Weight	214
6.2.3	Development of Molecular Marker <i>QGW6A-232</i> CAPS Related to Thousand Kernel Weight	217
6.3	Creation and Application of Molecular Breeding Elements with Superior QTL Allele	220
6.3.1	Clarifying the Implication of Negative and Positive Values of QTL Additive	221
6.3.2	Determine the Source of Favorable QTL Gene	221
6.3.3	Creating the Breeding Element	222
6.3.4	Obtaining the Molecular Marker of Breeding Elements and Its Application	222
	References	224

7	The Technology Roadmap by MAS.	227
7.1	The Technical Route of Many Loci by MAS in Whole Course of Conventional Breeding	227
7.1.1	Selecting the Parents and Arranging the Combinations According to Gene/QTL Presence or Absence and Recombination.	228
7.1.2	Selecting the F ₁ Combinations and Determining the Population of F ₂ Generation	229
7.1.3	Selecting the Good Lines According to Track the Aiming Gene/QTL and Phenotype Identification	229
7.1.4	Identification Strains with the Aiming Gene/QTL	229
7.2	The Technology Route of Gene/QTL Transferring by MAS in Backcross Breeding	230
7.3	The Technology Route of Gene/QTL Pyramiding by MAS in Step-Cross Breeding	231
7.4	The Technology Roadmap of Breeding by Design Using MAS.	233
8	Molecular Markers of Yield Traits and Their Application	235
8.1	Molecular Markers of Yield Traits	235
8.1.1	Molecular Markers of Wheat Yield Obtained by QTL Mapping.	235
8.1.2	Molecular Markers Used Better in Breeding for Wheat Yield.	236
8.2	The Applications of Molecular Markers Relating with Yield Traits	248
8.2.1	The Application of Molecular Markers Related Grain Number	248
8.2.2	Functional Identification of the Markers <i>Hap-6A-G/-A</i> on Wheat Grain Weight	250
8.2.3	Selecting the Grain Weight by MAS Using the Markers <i>Hap-6A-PI/P2</i>	253
8.2.4	The Application of Spike Length Gene by MAS	254
8.2.5	The Application of Other Markers with Yield-Related Traits	256
	References	256
9	Molecular Markers of Quality Traits and Their Applications.	259
9.1	Molecular Markers of Quality Traits.	259
9.1.1	Molecular Markers of Quality Traits by QTL Mapping.	259
9.1.2	The Better Molecular Markers Used in Breeding for Wheat Quality	266

9.2	The Applications of Molecular Markers Relating with Quality Traits	266
9.2.1	Molecular Markers of Yellow Pigment and Its Application	266
9.2.2	Molecular Markers of HMW-GS and Its Application	273
9.2.3	Molecular Markers of Grain Protein Content and Grain Hardness and Their Applications	275
9.2.4	Molecular Markers of PPO Gene and Their Application	275
9.2.5	Molecular Identification of Wheat Quality of Shannong 20	276
	References	277
10	Molecular Markers of Physiological Traits and Their Applications.	281
10.1	Molecular Markers of Physiological Traits.	281
10.1.1	Molecular Markers Obtained by QTL Mapping of Physiological Traits	281
10.1.2	The Better Molecular Markers Used in Breeding for Wheat Physiological Traits	285
10.2	The Applications of Molecular Markers Relating with Physiological Traits	285
10.2.1	The Application of Molecular Markers of Vernalization	290
10.2.2	The Application of Molecular Markers of Photoperiod Genes	291
10.2.3	The Application of Molecular Markers of Dwarfing Genes	291
10.2.4	The Application of Molecular Markers of Preharvest Resistance	292
10.2.5	The Application of Other Markers of Physiological Traits	293
	References	293
11	Molecular Markers of Resistance Traits and Their Applications.	295
11.1	Molecular Markers of Resistance Traits.	295
11.1.1	Major QTLs of Root Length and Coleoptile Length Under Drought	296
11.1.2	Major QTLs Under Heavy Metal Stress	296
11.1.3	Major QTLs of Adult-Plant Powdery Mildew Resistance	296
11.1.4	Major QTLs of Preharvest Resistance	296

- 11.1.5 Molecular Markers Reported for Wheat Resistance Traits 296
- 11.2 The Applications of Molecular Markers Relating with Resistance Traits 300
 - 11.2.1 The Application of Molecular Markers of Rust Resistance 300
 - 11.2.2 The Application of Molecular Markers of *Scab* (Fusarium Head Blight). 305
