Part I Fundamental Aerodynamics

1	Introduction	3
1.1	Definitions and Notations	3
1.2	Discussion of Mathematical Models	6
1.3	Description of the Book Content	9
	References	11
2	Inviscid, Incompressible Flow Past Circular Cylinders and Joukowski Airfoils	13
2.1	Background	13
2.1.1	Notation	13
2.1.2	Governing Equations	13
2.1.3	Boundary Conditions	15
2.1.4	Other Formulations	15
2.2	Elementary Solutions	17
2.2.1	Uniform Flow	17
2.2.2	Source and Sink	18
2.2.3	Doublet	18
2.2.4	Potential Vortex	20
2.3	Superposition of Elementary Solutions	21
2.3.1	Global Integrals	21
2.3.2	Example of Superposition: Semi-infinite Obstacle	21
2.4	Flow Past a Circular Cylinder	22
2.5	Flow Past Arbitrary Airfoils	25
2.5.1	Kutta-Joukowski Lift Theorem	25
2.5.2	The d'Alembert Paradox	29
2.6	The Kutta-Joukowski Condition	30

2.7	Definitions	30
2.7.1	Center of Pressure—Aerodynamic Center	31
2.7.2	Results for the Circular Cylinder	31
2.8	Special Cases of Joukowski Airfoils	33
2.8.1	The Ellipse at Zero Incidence	33
2.8.2	The Ellipse at Incidence	35
2.8.3	The Flat Plate at Incidence	37
2.8.4	Circular Arc	42
2.8.5	Joukowski Airfoil at Incidence	44
2.9	Summary of Chapter 2.	45
2.10	Problems	47
	Reference	49
3	Inviscid, Incompressible Flow Past Thin Airfoils	51
3.1	Introduction	51
3.1.1	Definition of a Thin Airfoil.	51
3.1.2	Profile at Incidence	52
3.1.3	Examples of Camber and Thickness Distributions	53
3.2	Small Disturbance Linearization Method	55
3.2.1	Linearization of the Tangency Condition.	56
3.2.2	Linearization of the Pressure Coefficient.	57
3.3	Decomposition into Symmetric and Lifting Problems.	58
3.4	The Symmetric Problem.	59
3.5	Lifting Problem.	63
3.5.1	Solution of the Fundamental Integral Equation	65
3.5.2	Example: Flat Plate	67
3.5.3	Example: Parabolic Plate	68
3.5.4	Forces	70
3.5.5	Moment	73
3.5.6	Center of Pressure	73
3.5.7	Aerodynamic Center.	74
3.5.8	Example of Design Problem	75
3.6	A Family of Profiles with Minimum Pressure Gradient	77
3.7	Numerical Solution of the Fundamental Integral Equation.	82
3.8	Summary of Chapter 3.	86
3.9	Problems	87
	References.	89
4	Inviscid, Compressible Flow Past Thin Airfoils	91
4.1	Introduction	91
4.2	Governing Equations	91
4.3	Linearized Compressible Flow Potential Equation	93
4.4	Prandtl-Glauert Transformation	95

4.5	Linearized Supersonic Flow	96
4.5.1	Jump Conditions: Shock and Expansion Waves	100
4.5.2	Forces	101
4.5.3	Moment	103
4.5.4	Center of Pressure	103
4.5.5	Aerodynamic Center.	104
4.6	Limit of Validity of Linearized Theories	104
4.7	Transonic Small Disturbance Theory	106
4.7.1	Governing Equation	106
4.7.2	Boundary Conditions	110
4.7.3	Jump Conditions	110
4.7.4	Riemann Invariants	113
4.7.5	Forces and Moment	113
4.7.6	Murman-Cole Scheme	118
4.7.7	A Useful Nozzle Flow Solution	121
4.7.8	Supersonic Flow Adjacent to Uniform Flow Region	127
4.8	Summary of Chapter 4.	130
4.9	Problems	131
	References.	133
5	Inviscid, Unsteady Flows Past Airfoils	135
5.1	Unsteady Incompressible Flows.	135
5.1.1	Unsteady Flow Past Thin Cambered Plates: Governing Equations	135
5.1.2	Unsteady Flow Past Thin Cambered Plates: Forces and Moment	137
5.1.3	Unsteady Flow Past Thin Airfoils: Far Field Condition for Potential	140
5.1.4	Example: Plunging Plate.	141
5.1.5	Example: Pitching NACA0012	144
5.2	Unsteady Compressible Flows.	145
5.2.1	The Full Potential Equation.	145
5.2.2	The Transonic Small Disturbance Equation	148
5.3	Summary of Chapter 5.	150
5.4	Problems	151
5.4.1	Motion of a Vortex Pair Above Ground	151
5.4.2	Falling Plate over Flat Surface.	152
	References.	153
6	Flow Past Large and Moderate Aspect Ratio Wings.	155
6.1	Wing Geometric Parameters	156
6.2	Small Disturbance Theories	158
6.3	Flow Past Thin Wings	159

6.4	Fundamental Feature of the Flow Past Finite Wings: The Vortex Sheet	160
6.5	Two-Dimensional and Three-Dimensional Vorticity Representations	161
6.6	Forces	165
6.6.1	Lift	166
6.6.2	Drag.	167
6.7	Prandtl Lifting Line Theory (Incompressible Flow)	172
6.7.1	Induced Drag for Non-ideal Wings.	176
6.7.2	Wing Lift Curve and Drag Polar	176
6.7.3	Design of an Ideal Wing.	178
6.7.4	Local and Global Lift Coefficients	181
6.7.5	Pitching Moment	183
6.7.6	Example of Wing Loading with Upwash.	184
6.7.7	Extension of the Theory to Non-straight Lifting Lines	185
6.7.8	Numerical Solution of Prandtl Integro-Differential Equation	188
6.8	Incompressible Flow Over Moderate Aspect Ratio Wings: The Vortex Lattice Method.	195
6.9	Compressible Flow Over Moderate Aspect Ratio Wings.	197
6.9.1	Symmetric Problem in Subsonic Flow	197
6.9.2	Lifting Problem in Subsonic Flow	200
6.9.3	Extended Lifting Line Theory	201
6.10	Supersonic Flow Over Moderate Aspect Ratio Wings	201
6.10.1	Symmetric Problem	201
6.10.2	Lifting Problem	202
6.10.3	Rectangular Wings.	203
6.11	General Wings in Subsonic and Supersonic Flows.	205
6.11.1	Wings in Subsonic Flows	205
6.11.2	Wings in Supersonic Flows.	207
6.11.3	Wings in Transonic Flows	209
6.12	Transonic Lifting Line Theory	210
6.13	Summary of Chapter 6.	214
6.14	Problems	215
6.14.1	Analysis Problem.	215
6.14.2	Design Problem.	215
	References.	216
7	Axisymmetric Flows and Slender Body Theories	217
7.1	Governing Equations in Cylindrical Coordinates	217
7.2	Small Disturbance Theory	220
7.2.1	Calculations of Wave Drag	224
7.2.2	Optimum Shapes	225

7.3	Lift and Induced Drag of a Body of Revolution at Angle of Attack.	228
7.4	Low Aspect Ratio Flat Wings.	233
7.5	Swept and Oblique Wings	236
7.6	Wing-Body Combinations	236
7.7	Slender Bodies with General Cross Sections	238
7.8	Supersonic Area Rule	243
7.9	Conical Flows.	246
7.9.1	Method of Taylor and Maccoll	246
7.9.2	Small Disturbance Approximations for Flows Over a Cone.	248
7.9.3	Conical Flow Past a Delta Wing	250
7.9.4	Rectangular Wings at Angle of Attack	254
7.9.5	Numerical Solution of Conical Euler Equations	254
7.10	Summary of Chapter 7.	256
7.11	Problems	256
	References.	258
8	Viscous Fluid Flow and Laminar Boundary Layers	261
8.1	Incompressible 2-D Flows	261
8.1.1	Vorticity Versus Strain Rate in 2-D	262
8.1.2	Viscous Stresses in 2-D (Cartesian Coordinates)	264
8.1.3	Constitutive Relations.	266
8.1.4	Navier-Stokes Equations for 2-D Incompressible Flows.	266
8.1.5	Laminar Boundary Layer Theory (Prandtl 1904)	267
8.1.6	Boundary Layer over a Flat Plate.	269
8.1.7	Numerical Method for the Solution of Boundary Layer Equations.	270
8.1.8	Boundary Layer Thicknesses.	271
8.2	Compressible Viscous Fluid Flow	272
8.2.1	Viscous Stresses and Constitutive Relations	272
8.2.2	Navier-Stokes Equations for 2-D Compressible Flows.	272
8.2.3	Energy Equation for Compressible Viscous Flows.	273
8.2.4	Boundary Layer Equations for Compressible Flows.	274
8.2.5	Further Simplifications for the Case $P_r = 1$	275
8.2.6	Determination of Drag	275
8.2.7	Unsteady Boundary Layer.	276
8.3	Historical and Classical Works	277
8.3.1	Blasius Solution for the Flat Plate (No Pressure Gradient)	277

8.3.2	Flow Past a Wedge (Falkner/Skan).	278
8.3.3	von Karman Integral Momentum Equation	279
8.3.4	Derivation of von Karman Integral Equation for Compressible Flows with Pressure Gradient	281
8.3.5	Transformations of Boundary Layer Equations	283
8.3.6	Flow Separation.	286
8.3.7	Flow at the Trailing Edge	288
8.3.8	Three Dimensional Boundary Layers	289
8.4	Summary of Chapter 8.	290
8.5	Problems	291
	References.	291
9	Viscous/Inviscid Interaction Procedures	293
9.1	Viscous/Inviscid Interaction Procedures Based on Displacement Thickness Concept	293
9.1.1	Coupling Integral Formulations of both Inviscid and Viscous Flow Regions	297
9.1.2	Coupling the Numerical Solution of the Partial Differential Equations of the Inviscid Flow with Integral Equations of Boundary Layers	303
9.1.3	Coupling the Numerical Solution of the Partial Differential Equations of the Viscous Flow with the Integral Equations of the Outer Inviscid Flows.	314
9.1.4	Coupling Numerical Solutions of Partial Differential Equations of both the Inviscid and Viscous Flow Regions	315
9.2	Viscous/Inviscid Interaction Procedures Based on Domain Decomposition Techniques	315
9.3	Summary of Chapter 9.	322
	References.	322

Part II Special Topics

10	Wind Turbine and Propeller Aerodynamics—Analysis and Design	327
10.1	Introduction—the Different Types of Wind Turbines	327
10.1.1	Aerodynamics Forces—Lift and Drag.	328
10.1.2	Savonius Rotor	330
10.1.3	Darrieus Rotor.	330
10.1.4	Horizontal Axis Wind Turbine.	333
10.2	General 1-D Conservation Theorems—Actuator Disk Theory	333

10.3	Vortex Model and Strip Theory—The Goldstein Model	336
10.3.1	General Comments.	336
10.3.2	Adimensionalization—Discretization of the Vortex Sheets.	338
10.3.3	Biot-Savart Law—Induced Velocities	341
10.3.4	Forces and Moment	342
10.3.5	Wake Equilibrium Condition	344
10.4	Aerodynamic Design of a Rotor Blade—Betz Minimum Energy Condition	345
10.4.1	Formulation.	345
10.4.2	Discretization	348
10.4.3	Viscous Correction.	351
10.5	Analysis of the Flow Past a Given Rotor	353
10.5.1	Formulation.	353
10.5.2	Algorithm for High Incidences—Regularization of the Solution.	354
10.5.3	Validation	355
10.6	Unsteady Flow Simulation	357
10.6.1	Effect of Yaw	359
10.6.2	Tower Interference Model	360
10.6.3	Validation	361
10.7	Hybrid Method	363
10.8	Perspectives	366
10.9	Propellers	367
10.10	Problems	370
	References.	371
11	Glider and Airplane Design.	373
11.1	Introduction	373
11.2	Model of a Classical Wing/Tail Configuration.	374
11.2.1	Linear Model for the Main Wing	374
11.2.2	Linear Model for the Tail	375
11.2.3	Aerodynamic Coefficients for the Fuselage	377
11.2.4	Global Aerodynamic Coefficients for the Glider.	378
11.3	Rapid Prototyping	379
11.4	Acceleration Phase	382
11.5	Longitudinal Equilibrium	383
11.6	Static Stability.	386
11.7	Winglet Design	390
11.8	Trimming the Glider for Maximum Distance.	392
11.9	Trimming the Glider for Maximum Duration	393
11.10	Classical Versus Canard Configurations	393

11.11	Conclusion	395
11.12	Problems	395
	References.	397
12	Introduction to Hypersonic Flows	399
12.1	Regimes of Compressible Flow	399
12.2	Inviscid Theories of Hypersonic Flows.	401
12.2.1	Hypersonic Potential Flow	401
12.2.2	Prandtl/Meyer Expansion for Hypersonic Flows. . . .	403
12.2.3	Hypersonic Flow over a Flat Plate at Angle of Attack	404
12.2.4	Power Series Expansion of Pressure Coefficients . . .	404
12.2.5	Bodies of Revolution	405
12.2.6	Hypersonic Small Disturbance Theory	406
12.2.7	Unsteady Analogy	409
12.2.8	Unsteady Hypersonic Flows	410
12.2.9	Unified Supersonic-Hypersonic Small Disturbance Theory	411
12.2.10	Formulation of the Full and Reduced Problems in Terms of Stream Functions	411
12.2.11	Similarity Solutions for Power Law Bodies.	416
12.2.12	Newtonian Flows.	419
12.2.13	Cole's Slender Body Theory of Newtonian Flow . . .	422
12.2.14	Slender Body at Angle of Attack, Bow Shocks Around Blunt Bodies and Numerical Simulations of Hypersonic Inviscid Flows	426
12.3	Viscous Hypersonic Flows	432
12.3.1	Navier-Stokes Equations.	433
12.3.2	Laminar Boundary Layer in Weak Interaction Regime.	435
12.3.3	Solutions of Laminar Boundary Layer Equations at Hypersonic Speeds	438
12.3.4	Weak Viscous/Inviscid Interactions	440
12.3.5	Strong Viscous/Inviscid Interaction	441
12.3.6	Theoretical Developments.	443
12.4	Hypersonic Area Rule	444
12.5	Hypersonic Similitude	446
12.6	Hypersonic Vehicle Design.	447
	References.	450
13	Flow Analogies	457
13.1	Hele-Shaw Flows	457
13.2	Hydraulic Analogy	461

13.3	Electric Analogy	468
13.3.1	Analog Representation of Circulation Around Lifting Airfoils.	469
13.3.2	Analog Study of Flows Around Bodies of Revolution	470
13.3.3	Hodograph Tank	470
13.3.4	Analog Study of Supersonic Conical Flows.	471
13.4	Analog Study of Three-Dimensional Flows.	472
13.5	Sobieczky's Rheograph-Transformations.	474
13.6	Electronic Analog Computers: Networks Versus Tanks	475
13.7	Concluding Remarks	476
	References.	476

Part III Problems and Solutions

14	Problems	481
14.1	Problem 1	481
14.1.1	Thin Airfoil Theory (2-D Inviscid Flow).	481
14.1.2	Lifting Line Theory	482
14.1.3	Equilibrium of the Glider (3-D Incompressible Flow)	483
14.2	Problem 2	484
14.2.1	Thin Airfoil Theory (2-D Inviscid Flow).	484
14.2.2	Lifting Line Theory (3-D Inviscid Flow).	484
14.2.3	Airplane Longitudinal Equilibrium.	485
14.3	Problem 3	486
14.3.1	Thin Airfoil Theory (2-D Inviscid Flow).	486
14.3.2	Lifting Line Theory (3-D Inviscid Flow).	487
14.3.3	Glider Equilibrium.	487
14.4	Problem 4	488
14.4.1	2-D Inviscid, Linearized, Thin Airfoil Theories	488
14.4.2	Prandtl Lifting Line Theory.	490
14.4.3	Equilibrium of the Aggie Micro Flyer	490
14.5	Problem 5	492
14.5.1	2-D Inviscid, Linearized, Thin Airfoil Theories	492
14.5.2	Prandtl Lifting Line Theory.	494
14.5.3	Equilibrium of the Aggie Micro Flyer	494
14.6	Problem 6	496
14.6.1	2-D Inviscid, Linearized, Thin Airfoil Theories	496
14.6.2	Prandtl Lifting Line Theory.	497
14.6.3	Equilibrium of the Aggie Micro Flyer	498
14.7	Problem 7	499
14.7.1	2-D Inviscid, Linearized, Thin Airfoil Theories	499

14.7.2	Prandtl Lifting Line Theory.	500
14.7.3	Equilibrium of the AMAT09.	501
14.8	Problem 8	502
14.8.1	2-D Inviscid, Linearized, Thin Airfoil Theories	502
14.8.2	Prandtl Lifting Line Theory.	504
14.8.3	Equilibrium of the AMAT10.	505
14.9	Problem 9	506
14.9.1	2-D Inviscid, Linearized, Thin Airfoil Theories	506
14.9.2	Prandtl Lifting Line Theory.	508
14.9.3	Equilibrium of the AMAT11.	509
14.10	Problem 10.	510
14.10.1	2-D Inviscid, Linearized, Thin Airfoil Theories	510
14.10.2	Prandtl Lifting Line Theory.	511
14.10.3	Equilibrium of the Glider	513
15	Solutions to Problems	515
15.1	Solution to Problem 1	515
15.1.1	Thin Airfoil Theory (2-D Inviscid Flow).	515
15.1.2	Lifting Line Theory	517
15.1.3	Equilibrium of the Glider (3-D Incompressible Flow)	518
15.2	Solution to Problem 2	520
15.2.1	Thin Airfoil Theory (2-D Inviscid Flow).	520
15.2.2	Lifting Line Theory (3-D Inviscid Flow).	521
15.2.3	Airplane Longitudinal Equilibrium.	523
15.3	Solution to Problem 3	524
15.3.1	Thin Airfoil Theory (2-D Inviscid Flow).	524
15.3.2	Lifting Line Theory (3-D Inviscid Flow).	526
15.3.3	Glider Equilibrium.	528
15.4	Solution to Problem 4	529
15.4.1	2-D Inviscid, Linearized, Thin Airfoil Theories	529
15.4.2	Prandtl Lifting Line Theory.	531
15.4.3	Equilibrium of the Aggie Micro Flyer	533
15.5	Solution to Problem 5	534
15.5.1	2-D Inviscid, Linearized, Thin Airfoil Theories	534
15.5.2	Prandtl Lifting Line Theory.	538
15.5.3	Equilibrium of the Aggie Micro Flyer (AMF III)	540
15.6	Solution to Problem 6	542
15.6.1	2-D Inviscid, Linearized, Thin Airfoil Theories	542
15.6.2	Prandtl Lifting Line Theory.	545
15.6.3	Equilibrium of the Aggie Micro Flyer	547

15.7	Solution to Problem 7	548
15.7.1	2-D Inviscid, Linearized, Thin Airfoil Theories	548
15.7.2	Prandtl Lifting Line Theory.	552
15.7.3	Equilibrium of the AMAT09.	553
15.8	Solution to Problem 8	555
15.8.1	2-D Inviscid, Linearized, Thin Airfoil Theories	555
15.8.2	Prandtl Lifting Line Theory.	559
15.8.3	Equilibrium of the AMAT2010	561
15.9	Solution to Problem 9	562
15.9.1	2-D Inviscid, Linearized, Thin Airfoil Theories	562
15.9.2	Prandtl Lifting Line Theory.	567
15.9.3	Equilibrium of the AMAT11.	568
15.10	Solution to Problem 10	570
15.10.1	2-D Inviscid, Linearized, Thin Airfoil Theories	570
15.10.2	Prandtl Lifting Line Theory.	573
15.10.3	Equilibrium of the Glider	575
