

Contents

I	Examples.	1
	Introduction	1
1	Vector Bundles on a Smooth Compact Manifold	2
	Some Localizations of the Algebra of Continuous Functions	2
	Vector Bundles and Finitely Generated Projective Modules	4
	Tangent Vectors and Derivations	5
	Differentials and Cotangent Bundle	6
	The Smooth Algebraic Compact Manifolds Case	6
	The Differential Module and the Module of Derivations of a Finitely Presented Algebra	7
2	Differential Forms with Polynomial Coefficients on a Smooth Affine Manifold.	8
	The Module of Differential Forms with Polynomial Coefficients on the Sphere	8
	The Module of Differential Forms with Polynomial Coefficients on a Smooth Algebraic Manifold	9
	The Smooth Hypersurface Case.	9
	The Smooth Complete Intersection Case.	10
	The General Case	11
II	The Basic Local-Global Principle and Systems of Linear Equations.	15
	Introduction	15
1	Some Facts Concerning Quotients and Localizations	15
2	The Basic Local-Global Principle.	18
	Comaximal Localizations and the Local-Global Principle	18
	Finite Character Properties	23
	Forcing Comaximality	25

3	Coherent Rings and Modules	26
	A Fundamental Notion	26
	Local Character of Coherence	29
	About the Equality and the Membership Tests	30
	Strongly Discrete Coherent Rings and Modules	31
4	Fundamental Systems of Orthogonal Idempotents	31
5	A Little Exterior Algebra	35
	Free Submodules as Direct Summands (Splitting Off)	35
	The Rank of a Free Module	36
	Exterior Powers of a Module	37
	Determinantal Ideals	38
	The Rank of a Matrix	39
	Generalized Pivot Method	40
	Generalized Cramer Formula	42
	A Magic Formula	43
	Generalized Inverses and Locally Simple Maps	44
	Grassmannians	46
	Injectivity and Surjectivity Criteria	47
	Characterization of Locally Simple Maps	48
	Trace, Norm, Discriminant, Transitivity	50
6	Basic Local-Global Principle for Modules	56
	Complexes and Exact Sequences	56
	Localization and Exact Sequences	58
	Local-Global Principle for Exact Sequences of Modules	58
	Exercises and Problems	60
	Some Solutions, or Sketches of Solutions	68
	Bibliographic Comments	75
III	The Method of Undetermined Coefficients	77
	Introduction	77
	A Few Words on Finite Sets	78
1	Polynomial Rings	79
	Partial Factorization Algorithm	79
	Universal Property of Polynomial Rings	79
	Algebraic Identities	80
	Symmetric Polynomials	82
2	Dedekind-Mertens Lemma	83
3	One of Kronecker's Theorems	85
	A-algebras and Integral Elements	85
	The Theorem	86
4	The Universal Splitting Algebra for a Monic Polynomial Over a Commutative Ring (1)	89

5	Discriminant, Diagonalization	92
	Definition of the Discriminant of a Monic Polynomial	92
	Diagonalization of the Matrices on a Ring	92
	The Generic Matrix is Diagonalizable	94
	An Identity Concerning Characteristic Polynomials	94
	An Identity Concerning Exterior Powers	95
	Tschirnhaus Transformation	95
	New Version of the Discriminant	96
	Discriminant of a Universal Splitting Algebra	97
6	Basic Galois Theory (1)	98
	Factorization and Zeros	98
	Strictly Finite Algebras over a Discrete Field	99
	The Elementary Case of Galois Theory	101
	Construction of a Splitting Field by Means of a Galois Resolvent, Basic Galois Theory	106
7	The Resultant	109
	Elimination Theory	109
	The Sylvester Matrix	111
	Revisiting the Discriminant	115
8	Algebraic Number Theory, First Steps	117
	Integral Algebras	118
	Number Fields	122
	Rings of Integers of a Number Field	123
9	Hilbert's Nullstellensatz	129
	The Algebraic Closure of \mathbb{Q} and of Finite Fields	129
	The Classical Nullstellensatz (Algebraically Closed Case)	130
	The Formal Nullstellensatz	135
10	Newton's Method in Algebra	137
	Exercises and Problems	140
	Some Solutions, or Sketches of Solutions	156
	Bibliographic Comments	172
IV	Finitely Presented Modules	173
	Introduction	173
1	Definition, Changing Generator Set	173
	A Digression on the Algebraic Computation	177
2	Finitely Presented Ideals	177
	Trivial Syzygies	178
	Regular Sequences	180
	A Geometry Example	181
3	The Category of Finitely Presented Modules	183
4	Stability Properties	185
	Coherence and Finite Presentation	186
	Tensor Product, Exterior Powers, Symmetrical Powers	186

	Changing the Base Ring	191
	Modules of Linear Maps	193
	The Local Character of the Finitely Presented Modules	194
	Null Tensors	195
5	Classification Problems for Finitely Presented Modules	196
	Two Results Concerning Finitely Generated Modules	196
6	Quasi-Integral Rings	197
	Equational Definition of pp-rings	198
	Elementary Local-Global Machinery no. 1	199
	Annihilators of the Finitely Generated Ideals in pp-rings	200
	Concrete Local-Global Principle for the pp-rings	200
7	Bezout Rings	201
	Finitely Presented Modules over Valuation Rings	201
	Finitely Presented Modules over PIDs	203
8	Zero-Dimensional Rings	204
	Basic Properties	204
	Reduced Zero-Dimensional Rings	205
	Characteristic Properties	205
	Equational Definition of Reduced Zero-Dimensional Rings	206
	Elementary Local-Global Machinery no. 2	207
	Finitely Presented Modules over Reduced Zero-Dimensional Rings	209
	Zero-Dimensional Polynomial Systems	210
9	Fitting Ideals	214
	Fitting Ideals of a Finitely Presented Module	214
	Fitting Ideals of a Finitely Generated Module	216
10	Resultant Ideal	217
	Exercises and Problems	219
	Some Solutions, or Sketches of Solutions	227
	Bibliographic Comments	238
V	Finitely Generated Projective Modules, 1	239
1	Introduction	239
2	Generalities	240
	Characteristic Properties	240
	Local-Global Principle	242
	Projective Modules and Schanuel's Lemma	243
	The Category of Finitely Generated Projective Modules	244
3	Finitely Generated Projective Modules over Zero-Dimensional Rings	248
4	Stably Free Modules	250
	When is a Stably Free Module Free?	251
	Bass' Stable Range	252

5	Natural Constructions	254
6	Local Structure Theorem.	256
7	Locally Cyclic Projective Modules and Finitely Generated Projective Ideals	257
	Locally Cyclic Modules	257
	Cyclic Projective Modules.	261
	Locally Cyclic Projective Modules	262
	Finitely Generated Projective Ideals	262
8	Determinant, Characteristic Polynomial, Fundamental Polynomial and Rank Polynomial	263
	The Determinant, the Characteristic Polynomial and the Cotransposed Endomorphism	264
	The Fundamental Polynomial and the Rank Polynomial	266
	Some Explicit Computations	269
	The Annihilator of a Finitely Generated Projective Module	271
	Canonical Decomposition of a Projective Module	272
	Rank Polynomial and Fitting Ideals	273
9	Properties of Finite Character	274
	Exercises and Problems	276
	Some Solutions, or Sketches of Solutions	284
	Bibliographic Comments	293
VI	Strictly Finite Algebras and Galois Algebras	295
	Introduction	295
1	Étale Algebras over a Discrete Field.	296
	Structure Theorem for Étale Algebras	296
	Étale Algebras over a Separably Factorial Field	301
	Perfect Fields, Separable Closure and Algebraic Closure	302
2	Basic Galois Theory (2)	305
3	Finitely Presented Algebras	307
	Generalities	307
	The Zeros of a Polynomial System.	309
	The Tensor Product of Two \mathbf{k} -algebras	311
	Integral Algebras	313
	The Lying Over Lemma	313
	Algebras Integral over Zero-Dimensional Rings.	313
	A Weak Nullstellensatz	314
	Integral Algebras over a pp-ring	315
	Algebras that are Finitely Presented Modules	316
	Integral Algebra over an Integrally Closed Ring	317
4	Strictly Finite Algebras.	318
	The Dual Module and the Trace	318
	Norm and Cotransposed Element	319
	Transitivity and Rank	320

5	Dualizing Linear Forms, Strictly Finite Algebras	321
	Dualizing Forms	321
	Strictly Étale Algebras	323
	Tensor Products	325
	Integral Elements, Idempotents, Diagonalization.	325
6	Separable Algebras, Separability Idempotent	328
	Towards the Separability Idempotent	329
	Derivations	332
	Separability Idempotent of a Strictly Étale Algebra.	334
	Separable Algebras.	336
7	Galois Algebras, General Theory	341
	Galois Correspondence, Obvious Facts	342
	A Natural Definition.	342
	Dedekind's Lemma	344
	Artin's Theorem and First Consequences	345
	The Galois Correspondence When \mathbf{A} Is Connected.	355
	Quotients of Galois Algebras.	356
	Exercises and Problems	357
	Some Solutions, or Sketches of Solutions	366
	Bibliographic Comments	377
VII	The Dynamic Method	379
	Introduction	379
1	The Nullstellensatz Without Algebraic Closure	380
	The Case of an Infinite Basis Field	380
	Changing Variables	383
	The General Case	384
	The Actual Nullstellensatz.	385
	Syzygies	387
2	The Dynamic Method.	388
	Splitting Fields and Galois Theory in Classical Mathematics	389
	Lazily Bypassing the Obstacle.	390
3	Introduction to Boolean Algebras.	391
	Discrete Boolean Algebras	392
	Boolean Algebra of the Idempotents of a Commutative Ring	392
	Galoisian Elements in a Boolean Algebra	393
4	The Universal Splitting Algebra (2)	398
	Galois Quotients of Pre-Galois Algebras	398
	Case Where the Boolean Algebra of a Universal Decomposition Algebra is Discrete.	401
	Discriminant	402
	Fixed Points	404

	Separability	405
	Triangular Structure of Galoisian Ideals	407
5	Splitting Field of a Polynomial over a Discrete Field	409
	“Reduced” Galois Quotients of the Universal Splitting Algebra	409
	Uniqueness of the Splitting Field	412
6	Galois Theory of a Separable Polynomial over a Discrete Field	412
	Existence and Uniqueness of the Dynamic and Static Splitting Field	412
	Structure of the Galois Quotients of the Universal Splitting Algebra	413
	Where the Computations Take Place	414
	Changing the Base Ring, Modular Method	415
	Lazy Galois Theory	416
	The Basic Algorithm	417
	When a Relative Resolvent Factorizes	418
	When the Triangular Structure Is Missing	420
	Exercises and Problems	420
	Some Solutions, or Sketches of Solutions	425
	Bibliographic Comments	432
VIII	Flat Modules	435
	Introduction	435
1	First Properties	435
	Definition and Basic Properties	435
	Local-Global Principle	438
	Other Characterization of Flatness	439
	Flat Quotients	442
2	Finitely Generated Flat Modules	444
3	Flat Principal Ideals	447
4	Finitely Generated Flat Ideals	449
	Arithmetic Rings and Prüfer Rings	451
	Local-Global Principle	451
	Local-Global Machinery	452
5	Flat Algebras	453
6	Faithfully Flat Algebras	456
	Exercises and Problems	462
	Some Solutions, or Sketches of Solutions	465
	Bibliographic Comments	474
IX	Local Rings, or Just About.	477
1	A Few Constructive Definitions	477
	The Jacobson Radical, Local Rings, Fields	477
	Prime and Maximal Ideals	480
	The Jacobson Radical and Units in an Integral Extension	481

2	Four Important Lemmas	482
3	Localization at $1 + \mathfrak{a}$	486
4	Examples of Local Rings in Algebraic Geometry.	489
	Local Algebra at a Zero	489
	Local Ring at an Isolated Point	494
	Local Ring at a Non-Singular Point of a Complete Intersection Curve	496
5	Decomposable Rings	500
	Decomposable Elements	500
	Lifting Idempotents	502
6	Local-Global Rings	503
	Definitions and the Concrete Local-Global Principle.	503
	Remarkable Local-Global Properties.	506
	Congruential Systems	509
	Stability by Integral Extension.	510
	Exercises and Problems	512
	Some Solutions, or Sketches of Solutions	518
	Bibliographic Comments	522
X	Finitely Generated Projective Modules, 2	523
	Introduction	523
1	The Finitely Generated Projective Modules are Locally Free . . .	523
	Complements on Exterior Powers of a Finitely Generated Projective Module.	524
	Case of the Modules of Constant Rank.	526
	General Case.	526
	Modules of Constant Rank: Some Precisions.	528
	Generic Case.	530
2	The Semiring $H_0^+(\mathbf{A})$, and the Ring of Generalized Ranks $H_0(\mathbf{A})$	530
3	Some Applications of the Local Structure Theorem	535
	Trace of an Endomorphism and New Expression for the Fundamental Polynomial	535
	Tensor Product	536
	Ranks and Linear Maps	537
	Transitivity Formulas	537
	Projective Modules of Rank 1	539
4	Grassmannians	540
	The Generic Rings \mathbf{G}_n and $\mathbf{G}_{n,k}$	540
	Affine Schemes, Tangent Spaces	545
	Nullstellensatz and Equivalence of Two Categories	545
	Affine Schemes.	547
	Tangent Space at a Point of a Functor	548

	Tangent Spaces to the Grassmannians	551
	Projectors and Ranks	551
	Affine Grassmannian	551
	Projective Grassmannian	553
5	Grothendieck and Picard Groups	555
	When the Projective Modules of Constant Rank are Free	556
	$\mathrm{GK}_0(\mathbf{A})$, $\mathrm{K}_0(\mathbf{A})$ and $\tilde{\mathrm{K}}_0(\mathbf{A})$	557
	The Picard Group	558
	The Semirings $\mathrm{GK}_0(\mathbf{A})$, $\mathrm{GK}_0(\mathbf{A}_{\mathrm{red}})$ and $\mathrm{GK}_0(\mathbf{A}/\mathrm{Rad} \mathbf{A})$	561
	The Milnor Square	562
6	A Nontrivial Example: Identification of Points	
	on the Affine Line	565
	Preliminaries	565
	Identification of Points Without Multiplicities	566
	Exercises and Problems	568
	Some Solutions, or Sketches of Solutions	588
	Bibliographic Comments	608
XI	Distributive Lattices Lattice-Groups	609
	Introduction	609
1	Distributive Lattices and Boolean Algebras	610
	Quotient Lattices, Ideals, Filters	612
	Boolean Algebras	614
	Boolean Algebra Generated by a Distributive Lattice	615
2	Lattice-Groups	617
	First Steps	617
	Remarkable Identities in the l -Groups	619
	Simultaneous Congruences, Covering Principle by Quotients	620
	Partial Decomposition, Complete Decomposition	624
3	GCD-Monoids, GCD-Domains	628
	Non-negative Submonoid of an l -group	628
	GCD-Monoids	629
	GCD-Rings	630
	GCD-Domains of Dimension at Most 1	631
	GCD in a Polynomial Ring	632
4	Zariski Lattice of a Commutative Ring	634
	Generalities	634
	Duality in the Commutative Rings	635
	Annihilating and Inverting Simultaneously	635
	Dual Definitions	636
	Saturated Pairs	637

	Closed Covering Principles	639
	Reduced Zero-Dimensional Closure of a Commutative Ring . . .	641
5	Entailment Relations and Heyting Algebras	647
	A New Look at Distributive Lattices	647
	Duality Between Finite Distributive Lattices and Finite Ordered Sets	649
	Heyting Algebras	650
	Exercises and Problems	652
	Some Solutions, or Sketches of Solutions	659
	Bibliographic Comments	668
XII	Prüfer and Dedekind Rings	669
	Introduction	669
1	Arithmetic Rings	670
	Locally Principal Ideals, Principal Localization Matrix	670
	First Properties	672
	Multiplicative Structure of Finitely Generated Ideals	675
2	Integral Elements and Localization	677
3	Prüfer Rings	681
	Extensions of Prüfer Rings	684
4	Coherent Prüfer Rings	686
	First Properties	686
	Kernel, Image and Cokernel of a Matrix	687
	Extensions of Coherent Prüfer Rings	689
5	pp-Rings of Dimension at Most 1	692
6	Coherent Prüfer Rings of Dimension ≤ 1	695
	When a Prüfer Rings Is a Bezout Ring	695
	An Important Characterization	695
	The Structure of Finitely Presented Modules	696
7	Factorization of Finitely Generated Ideals	698
	General Factorizations	698
	Factorizations in Dimension 1	699
	Prüfer Rings Admitting Partial Factorizations	699
	Dedekind Rings	700
	Exercises and Problems	704
	Some Solutions, or Sketches of Solutions	715
	Bibliographic Comments	732
XIII	Krull Dimension	735
	Introduction	735
1	Spectral Spaces	735
	The Zariski Lattice and the Zariski Spectrum	736
	Spectrum of a Distributive Lattice	736

	Spectral Subspaces	737
	A Heuristic Approach to the Krull Dimension	738
2	Constructive Definition and First Consequences.	738
	Iterated Boundaries, Singular Sequences, Complementary Sequences	742
	A Regular Sequence “Is Not” Singular	746
	Lower Bounds of the Krull Dimension	747
3	A Few Elementary Properties of the Krull Dimension	747
4	Integral Extensions.	750
5	Dimension of Geometric Rings	751
	Polynomial Rings over a Discrete Field	751
	An Interesting Corollary	753
	Geometric Rings	754
6	Krull Dimension of Distributive Lattices.	754
7	Dimension of Morphisms	757
	Definition and First Properties	757
	The Minimal pp-ring Closure of a Reduced Ring.	759
	Application	763
8	Valuative Dimension	765
	Dimension of Valuation Rings.	765
	Valuative Dimension of a Commutative Ring	768
	Valuative Dimension of a Polynomial Ring.	769
9	Lying Over, Going Up and Going Down	773
	Exercises and problems	778
	Some Solutions, or Sketches of Solutions	786
	Bibliographic Comments	794
XIV	The Number of Generators of a Module	797
	Introduction	797
1	Kronecker’s Theorem and Bass’ Stable Range (Non-Noetherian Versions of Heitmann).	797
	Kronecker’s Theorem	797
	Bass’ “Stable Range” Theorem, 1	799
	The Local Kronecker Theorem	800
2	Heitmann Dimension and Bass’ Theorem	801
	Bass’ “Stable Range” Theorem, 2	803
	“Improved” Variant of Kronecker’s Theorem	804
3	Serre’s Splitting Off Theorem, The Forster-Swan Theorem, and Bass’ Cancellation Theorem	806
	Serre’s Splitting Off theorem.	808
	The Forster-Swan Theorem	808
	Bass’ Cancellation Theorem	811
	A Simple Characteristic Property for $\text{Gdim } \mathbf{A} < n$	813

4	Supports and n -stability	815
	Supports, Dimension, Stability.	815
	Constructions and Patchings of Supports.	819
5	Elementary Column Operations	822
	With the Stability of a Support	823
	With the Heitmann Dimension.	825
	Exercises and Problems	826
	Some Solutions, or Sketches of Solutions	828
	Bibliographic Comments	832
XV	The Local-Global Principle.	835
	Introduction	835
1	Comaximal Monoids, Coverings	836
2	A Few Concrete Local-Global Principles	839
	Linear Systems	839
	Finiteness Properties for Modules.	841
	Properties of Commutative Rings.	842
	Concrete Local-Global Principles for Algebras.	842
3	A Few Abstract Local-Global Principles	844
4	Concrete Patching of Objects	847
	Glue and Scissors	847
	A Simple Case	849
	Patching of Objects in Modules	850
	Patching of Modules	852
	Patching of Homomorphisms Between Rings.	856
5	The Basic Constructive Local-Global Machinery	857
	Decryption of Classical Proofs Using Localization at All Primes.	857
	Examples of the Basic Local-Global Machinery.	859
	First Example	859
	Second Example: A Quasi-Global Result Obtained from a Given Proof for a Local Ring	860
6	Quotienting by All the Maximal Ideals.	862
7	Localizing at All the Minimal Prime Ideals.	866
8	Local-Global Principles in Depth 1	866
	McCoy's Theorem	868
9	Local-Global Principles in Depth 2	870
	Patchings in Depth 2	872
	Exercises and Problems	875
	Some Solutions, or Sketches of Solutions	878
	Bibliographic Comments	883

XVI	Extended Projective Modules	885
	Introduction	885
1	Extended Modules	885
	The Problem of the Extension	885
	The Case of the Polynomial Rings	886
2	The Traverso-Swan's Theorem, Seminormal Rings	887
	Preliminaries	888
	Seminormal Rings	889
	The Case of Integral Rings	890
	General Case	894
3	Patching à la Quillen-Vaserstein	895
	A Roitman Theorem	897
4	Horrocks' Theorem	899
5	Solution to Serre's Problem	903
	À la Quillen	903
	À la Suslin, Vaserstein or Rao	906
6	Projective Modules Extended from Valuation or Arithmetic Rings	912
	The Univariate Case	912
	The Multivariate Case	917
	Conclusion: A Few Conjectures	922
	Exercises and Problems	923
	Some Solutions, or Sketches of Solutions	925
	Bibliographic Comments	927
XVII	Suslin's Stability Theorem, the Field Case	929
	Introduction	929
1	The Elementary Group	929
	Transvections	929
	Special Matrices	931
2	The Mennicke Symbol	933
3	Unimodular Polynomial Vectors	935
4	Suslin's and Rao's Local-Global Principles	937
	Exercises and Problems	941
	Some Solutions, or Sketches of Solutions	942
	Bibliographic Comments	945
