Contents

1 Class of Exponentiated Distributions Introduction 1
1.1 Historical Note and Preview 1
1.2 Generalized Order Statistics 4
1.3 Why Use Asymmetric Loss Functions? 5
1.4 Markov Chain Monte Carlo (MCMC) Method 7
1.5 Bayes Prediction 8
1.6 Mixtures of Exponentiated Distribution Functions 9
References 11

2 Basic Properties, Estimation and Prediction Under Exponentiated Distributions 15
2.1 Introduction 15
2.2 Properties of the Exponentiated Class of Distributions 17
2.2.1 Moments 18
2.2.2 Quantiles 19
2.2.3 Mode 20
2.2.4 Hazard Rate Function 21
2.2.5 Proportional Reversed Hazard Rate Function 22
2.2.6 Density Function of the rth m-Generalized Order Statistic 22
2.3 Estimation of $\alpha, R(x_0), \lambda(x_0)$ (All Parameters of G are Known) 24
2.3.1 Maximum Likelihood Estimation of $\alpha, R(x_0), \lambda(x_0)$ . . . 24
2.3.2 Bayes Estimation of $\alpha, R(x_0), \lambda(x_0)$ 26
2.4 Estimation of $(\alpha, \beta_1, \ldots, \beta_k)$, $R_H(x_0)$ and $\lambda_H(x_0)$ (All Parameters of H are Unknown) 31
2.4.1 Maximum Likelihood Estimation of $(\alpha, \beta_1, \ldots, \beta_k), R_H(x_0), \lambda_H(x_0)$ 31

2.4.2 Bayes Estimation of $(\alpha, \beta_1, \ldots, \beta_k), R_H(x_0), \lambda_H(x_0)$ 32
2.5 Bayes One-Sample Prediction of Future Observables (All Parameters of H are Unknown) 38
2.5.1 One-Sample Scheme 38
2.6 Numerical Computations Applied to Three Examples 43
References 52

3 Family of Exponentiated Weibull Distributions 53
3.1 Introduction 53
3.2 Properties of the Exponentiated Weibull Family 55
3.2.1 Moments 55
3.2.2 Mean Residual Life (MRL) Function 56
3.2.3 Quantiles 61
3.2.4 Modes 62
3.2.5 Hazard Rate Function 65
3.2.6 Proportional Reversed Hazard Rate Function 66
3.2.7 Density Function of the rth m-Generalized Order Statistic 67
3.3 Estimation of $\alpha, \beta_1, \beta_2,\ R_H(x_0)$ and $\lambda_H(x_0)$, (Allparameters are Unknown) 69
3.3.1 Maximum Likelihood Estimation 69
3.3.2 Fisher Information Matrix 70
3.3.3 Bayes Estimation of $\alpha, \beta_1, \beta_2, R_H(x_0), \lambda_H(x_0)$ 71
3.4 Bayes Prediction of Future Observables 72
3.5 Related Distributions to the EW Family 72
3.6 Applications 76
References 77

4 Family of Exponentiated Exponential Distribution 81
4.1 Introduction 81
4.2 Stress-Strength Reliability 83
4.3 Entropy 85
4.4 Moments and Cumulants 86
4.5 Generalized Order Statistics 88
4.6 Distributions of Sums S_2 93
4.6.1 Distribution of the Sum S_n 94
4.7 Distribution of the Product and the Ratio 95
4.8 Maximum Likelihood Estimation 96
4.9 Characterization 97
References 100

5 Family of Exponentiated Burr Type XII Distributions 103
5.1 Introduction 103
5.2 Properties of the Exponentiated Burr XII Distributions 105
5.2.1 Moments 105
5.2.2 Mean Residual Life Function 106
5.2.3 Quantiles 108
5.2.4 Mode 108
5.2.5 HRF 109
5.2.6 Proportional Reversed Hazard Rate Function 111
5.2.7 Density Function of the rth m-Generalized Order Statistic 111
5.3 Estimation: All Parameters of H are Unknown 112
5.3.1 Maximum Likelihood Estimation of $(\alpha, \beta_1, \beta_2), R_H(x_0), \lambda_H(x_0)$ 112
5.3.2 Bayes Estimation of $(\alpha, \beta_1, \beta_2), R_H(x_0), \lambda_H(x_0)$ 114
5.4 Prediction of Future Observables 118
5.4.1 Random Sample Size 118
5.5 On Beta—Burr XII Distribution 120

6 Finite Mixture of Exponentiated Distributions 123
6.1 Introduction 123
6.2 Properties of Finite Mixtures 124
6.2.1 Moments 124
6.2.2 MRLF. 125
6.2.3 HRF 126
6.2.4 PRHRF 127
6.3 Point Estimation Based on Balanced Square Error Loss Function. 129
6.3.1 Maximum Likelihood Estimation 130
6.3.2 Bayes Estimation 132
6.4 Numerical Example. 136
6.4.1 Point Estimation of the Parameters, SF and HRF 136
6.4.2 Interval Estimation of the Parameters 138
