<b>Green Synthesis of Silver Nanoparticles Using Latex Extract of <i>Thevetia Peruviana</i>: A Novel Approach Towards Poisonous Plant Utilization</b> . . . . .	1
Ni Nyoman Rupiasih, Avinash Aher, Suresh Gosavi and P.B. Vidyasagar	
1 Introduction . . . . .	2
2 Materials and Methods . . . . .	4
2.1 Preparation of Latex Extracts . . . . .	4
2.2 Synthesis of Silver Nanoparticles . . . . .	4
2.3 Characterization Techniques. . . . .	5
3 Results and Discussion . . . . .	5
4 Concluding Remarks. . . . .	9
References . . . . .	9
 <b>A Study on the Power Functions of the Shewhart <math>\bar{X}</math> Chart via Monte Carlo Simulation</b> . . . . .	11
M.B.C. Khoo	
1 Introduction . . . . .	11
2 Shewhart $\bar{X}$ Chart . . . . .	12
3 Shewhart $\bar{X}$ Chart's Power Functions . . . . .	14
4 Shewhart $\bar{X}$ Chart's Probability Tables . . . . .	16
4.1 Formulae and Computation of Probabilities for the Power Functions . . . . .	16
4.2 Probability Tables. . . . .	20
5 A Study on the Performance . . . . .	20
6 Concluding Remarks. . . . .	25
References . . . . .	26

<b>B-Spline Collocation with Domain Decomposition Method and Its Application for Singularly Perturbed Convection-Diffusion Problems. . . . .</b>	<b>27</b>
Mas Irfan P. Hidayat, Bambang Ariwahjoedi and Setyamartana Parman	
1 Introduction . . . . .	28
2 Global B-Spline Collocation. . . . .	29
3 Overlapping Domain Decomposition Methods . . . . .	31
4 Numerical Examples . . . . .	34
4.1 Poisson Equation on L-Domain . . . . .	35
5 Numerical Simulations of Singularly Perturbed Convection-Diffusion Problems . . . . .	41
5.1 Singularly Perturbed Problem. . . . .	41
5.2 Convection-Dominated Problem . . . . .	42
6 Conclusions . . . . .	45
References . . . . .	46
<b>Introducing the Dimensional Continuous Space–Time Theory . . . . .</b>	<b>49</b>
Luiz Cesar Martini	
1 Introduction . . . . .	49
2 Embryo of the Primitive Continuous Space–Time . . . . .	50
3 Introducing the Temporal Variation in the Length $\alpha$ . . . . .	52
4 Identification of Light Speed as a Universal Constant . . . . .	54
5 Determination of the Angular Frequency $\omega_0$ . . . . .	55
6 Introduction of the Phase Variation . . . . .	56
7 Alteration of Equilibrium Conditions. . . . .	57
8 Real Condition of the Invariability Before the Big-Bang . . . . .	59
9 Characterization of the Dimensional Variation . . . . .	60
10 The General Form of the Primitive Equation in Static and Dynamics Forms . . . . .	61
11 Some Theoretical Results. . . . .	63
12 Conclusions . . . . .	65
References . . . . .	65
<b>Application of Nikiforov-Uvarov Method for Non-central Potential System Solution. . . . .</b>	<b>67</b>
C. Cari and A. Suparmi	
1 Introduction . . . . .	67
2 Non-central Potential. . . . .	68
3 Nikiforov-Uvarov Method . . . . .	70
4 Application of NU Method for Non-central Potential. . . . .	75

4.1	Energy Spectrum and Wave Function of 3D Oscillator Harmonics Plus Trigonometric Rosen-Morse Non-central Potential . . . . .	75
4.2	Energy Spectrum and Wave Function of Eckart Plus Poschl-Teller Non-central Potential . . . . .	85
	References . . . . .	92
<b>Charge Transport Mechanism and Low Temperature Phase Transitions in <math>\text{KIO}_3</math> . . . . .</b>		
	M.M. Abdel Kader, F. El-Kabbany, H.M. Naguib and W.M. Gamal	95
1	Introduction . . . . .	95
2	Experimental Procedures . . . . .	99
	2.1 Sample Preparation . . . . .	99
	2.2 Characterization Techniques . . . . .	99
3	Results . . . . .	101
	3.1 Ferroelectricity . . . . .	101
	3.2 Dielectric Permittivity . . . . .	101
	3.3 Electrical Conductivity . . . . .	103
4	Discussion . . . . .	105
5	Conclusion . . . . .	109
	References . . . . .	109
<b>Low Power Transmitter for Capsule Endoscope . . . . .</b>		
	De Xing Lioe, Suhaidi Shafie, Harikrishnan Ramiah, Nasri Sulaiman and Izhal Abdul Halin	111
1	Introduction . . . . .	111
2	Imager Selection . . . . .	113
3	Design Consideration . . . . .	114
	3.1 Carrier Frequency . . . . .	114
	3.2 Power Consumption . . . . .	115
	3.3 Imaging Quality . . . . .	116
4	Proposed Transmitter . . . . .	116
	4.1 Mixer . . . . .	117
	4.2 Local Oscillator . . . . .	118

2.3	Stack . . . . .	209
2.4	Drive Ratio . . . . .	211
2.5	Working Gas . . . . .	211
3	Procedure of the Experiments. . . . .	212
3.1	Experimental Set-Up. . . . .	212
4	Result and Discussion . . . . .	214
4.1	Effect of Input Voltage Setting on Thermal Performance . . . . .	214

4.2	The Effect of Plate Thickness on the Thermal Performance and Cooling Rate . . . . .	217
5	Conclusions . . . . .	219
	References . . . . .	219

### **Characteristic of Coal Stockpile in Lowland and the Effect to Environment . . . . .**

	Rusdianasari, Susila Arita, Eddy Ibrahim and Ngudiantoro	
1	Description of Stockpile . . . . .	221
1.1	Types of Stockpile Based on the System of Stockpiling . . . . .	222
1.2	Technical Terms of Stockpiling . . . . .	223
1.3	Coal Delivery . . . . .	224
1.4	Potential Effects of Coal Stockpiling. . . . .	225
2	The Characteristics of Coal Stockpile in Lowlands . . . . .	226
3	Environment Quality of Coal Stockpile . . . . .	227
3.1	Air Quality in Stockpile . . . . .	227
3.2	Water Quality . . . . .	230
4	Environmental Impact of Coal Stockpile . . . . .	232
4.1	Impact on Air Quality. . . . .	232
4.2	Impact to Water Quality . . . . .	233
4.3	Impact to Soil Quality. . . . .	236
	References . . . . .	243

### **Synthesis and Characterization of Calcium Iodate, Monohydrate Crystals Grown in Silica Gel . . . . .**

	S.J. Shitole	
1	Introduction . . . . .	245
2	Experimental . . . . .	246
3	Result and Discussion . . . . .	247
4	Characterization . . . . .	249
4.1	XRD (X-Ray Diffractometry). . . . .	249
4.2	FTIR Characterization. . . . .	251
4.3	Thermal Analysis . . . . .	252
4.4	Powder SHG Measurements . . . . .	254
5	Conclusions . . . . .	255
	References . . . . .	256

### **Reduction of Power Consumption for Centrifugation Process Using Separation Efficiency Model . . . . .**

	M.S. Salim, M.F. Abd Malek and Naseer Sabri	
1	Introduction . . . . .	259
2	Separation Efficiency . . . . .	261
3	Linear Velocity Profile Generator . . . . .	262

4	Experimental Setup . . . . .	262
5	Centrifugation Period Model . . . . .	263
6	Centrifugation Power Consumption Model . . . . .	264
7	Conclusions . . . . .	268
	References . . . . .	269

### **A Wide Range Measurement and Disclosure of Ultrasonic Attenuation for Very Low Concentrations of Solid in Liquids**

#### **Using Exponential Pulser Technique. . . . . 271**

M.S. Salim, M.F. Abd Malek and Naseer Sabri

1	Introduction . . . . .	271
2	Ultrasonic Pulser Design . . . . .	274
3	Validation of PPD Design . . . . .	276
4	Discussion . . . . .	279
5	Conclusion. . . . .	280
	References . . . . .	281

### **Wireless Sensor Network Wave Propagation in Vegetation . . . . . 283**

Naseer Sabri, S.A. Aljunid, M.S. Salim, S. Fouad and R. Kamaruddin

1	Introduction . . . . .	283
2	Precision Agriculture Based WSN . . . . .	284
3	Physical Aspect Challenges of Applying WSN in Agricultural Fields . . . . .	285
4	Radio Wave Propagation Models in Simulation Tools . . . . .	286
	4.1 Free Space Path Loss (FSPL). . . . .	286
	4.2 Two-Ray Ground Reflection Model . . . . .	287
5	Wave Propagation Models in Vegetation . . . . .	287
	5.1 Weissberger's Model . . . . .	288
	5.2 Early ITU Vegetation Model . . . . .	288
6	Total Path Loss in Vegetation . . . . .	289
7	Simulation Setup of WSN in Agricultural Greenhouse . . . . .	290
8	Results and Discussion . . . . .	291
	8.1 Communication Coverage Simulation . . . . .	293
	8.2 Network Connectivity Simulation . . . . .	294
9	Conclusions . . . . .	296
	References . . . . .	297

### **Fiber Optic Sensors: Short Review and Applications. . . . . 299**

Naseer Sabri, S.A. Aljunid, M.S. Salim and S. Fouad

1	Introduction . . . . .	299
2	General Features of Fiber Optical Sensors . . . . .	300
3	Fiber Optic Sensor Principles . . . . .	302
4	Fiber Optic Sensors Category . . . . .	303
5	Classification of Fibre Optical Sensors . . . . .	304

6	Measurands of Optical Sensors. . . . .	305
6.1	Sensing Strategies. . . . .	305
6.2	Degree of Sensing . . . . .	306
6.3	Role of Optical Fiber . . . . .	306
7	Fiber Optical Sensor Types . . . . .	306
8	Fiber Optical Sensing Applications . . . . .	307
9	Conclusions . . . . .	309
	References . . . . .	310

### **Dynamic Effects of Piezoelectric Patch Actuators on Vibrational Response of Non-deterministic Structures:**

	<b>Modelling and Simulations. . . . .</b>	<b>313</b>
	Azni N. Wahid, Asan G.A. Muthalif and Khairul A.M. Nor	
1	Introduction . . . . .	313
1.1	Deterministic Structures Versus Non-deterministic Structures . . . . .	313
1.2	Statistical Energy Analysis . . . . .	314
2	Derivation of Equation of Motion . . . . .	316
2.1	A Rectangular Plate with Distributed Point Masses Attached with a PZT Patch Actuator. . . . .	316
3	Power Delivered to a Non-deterministic Thin Rectangular Plate . . . . .	321
4	Simulation Studies . . . . .	321
4.1	Influence of PZT Patch Actuator Location and Size on the Average Power Delivered to the Structure . . . . .	324
5	Conclusions . . . . .	326
	References . . . . .	335

### **Solubilities Prediction of Ginger Bioactive Compounds**

	<b>in Liquid Phase of Water by the COSMO-RS Method . . . . .</b>	<b>337</b>
	Syaripah Za'imah Syed Jaapar, Noor Azian Morad and Yoshio Iwai	
1	Introduction . . . . .	338
2	COSMO-RS Calculation Procedures . . . . .	340
3	Results and Discussion . . . . .	341
3.1	Validation of Calculated Results. . . . .	341
3.2	Calculated Results for Solubilities of Ginger Bioactive Compounds in Water . . . . .	347
4	Conclusion. . . . .	351
	References . . . . .	351

Recent Trends in Physics of Material Science and  
Technology

Gaol, F.L.; Shrivastava, K.; Akhtar, J. (Eds.)

2015, XII, 352 p. 196 illus., Hardcover

ISBN: 978-981-287-127-5
