

Contents

1	Introduction	1
1.1	Key Concepts on Landslide	1
1.2	A Brief Account of Some Destructive Landslides Occurrences	3
1.3	Relevance of the Landslide Study	3
1.4	Landsliding in Darjiling Himalaya	17
1.5	Mechanism and Causes of Landslides	23
1.6	Types and Classification of Landslide	30
1.7	Objectives of the Present Work	34
1.8	Applied Methodology	35
1.9	Data Used for Quantitative Study on Landslide	39
1.10	Existing Literature on Landslide Inducing Parameters	39
1.11	Slope Stability Models	43
1.11.1	Hydrological Models and Slope Stability	44
1.11.2	Landslide Susceptibility Zonation Models Concept	44
1.12	Study on Landslide Management	48
	References	50
2	Geo-spatial Variability of Physiographic Parameters and Landslide Potentiality	57
2.1	Introduction	57
2.2	Assessment of Geomorphic Attributes	59
2.2.1	Analysis of Contour Orientation	60
2.2.2	Digital Elevation Model (DEM)	61
2.2.3	Hypsometric Analysis	63
2.2.4	Lithological Composition and Landslide Potentiality	63
2.2.5	Analysis of Lineaments and Landslide Potentiality	67
2.2.6	Slope Angle and Landslide Potentiality	69
2.2.7	Slope Aspect and Landslide Potentiality	70
2.2.8	The Surface Curvature and Landslide Potentiality	71

2.3	The Soil	74
2.3.1	Textural Characteristics of the Soil	75
2.3.2	Saturated Soil Depth.	77
2.3.3	Water Holding Capacity, Pore Space and Volume Expansion of the Soil (in %)	80
2.3.4	Friction Angle (ϕ) and Cohesion (c)	86
2.3.5	Wet Soil Density (γ_s)	88
2.4	Conclusion	90
	References	92
3	Impact Assessment of Hydrologic Attributes and Slope Instability.	95
3.1	Introduction	95
3.2	Climatic Attributes and Landslides	97
3.2.1	Study on Rainfall	97
3.2.2	Evapotranspiration	99
3.2.3	Relationship Between Rainfall and Evapotranspiration and Determination of Deficit and Excess Moisture Period.	101
3.3	Drainage Network Evolution and Landslide	103
3.3.1	Drainage Network Analysis of 1972	103
3.3.2	Drainage Network Analysis of 1987	105
3.3.3	Drainage Concentration and Stream Confluence Point	109
3.3.4	Drainage Network Orientation	110
3.3.5	Drainage Density and Landslide Potentiality	110
3.3.6	Upslope Contributing Area and Landslide Potentiality	111
3.4	Drainage Morphometry and Slope Instability	114
3.4.1	Determination of Composite Ranking Coefficient Value and Instability Rank	116
3.5	Conclusion	118
	References	119
4	Surface Run-off, Soil Erosion and Slope Instability	123
4.1	Introduction	123
4.2	Run-off Estimation	126
4.2.1	Determination of Runoff Curve Number (RCN)	127
4.2.2	Calculation for Antecedent Moisture Condition or Cumulative Effects of Rainfall in Last Storm of the Year	133
4.2.3	Estimation of Discharge (in m^3) from Individual Sub-watershed	134

4.3	Relationship Between Land Use and Land Cover, Hydrological Soil Group, Curve Number (Under Average-AMC), Expected Run-off (m^3)	136
4.4	Sub-watershed Wise Analysis of Curve Number (AMC-III), Potential Retention (S) and Run-off	139
4.5	Periodic (Monthly) Relationship Between Surface Run-off and Slope Susceptibility	139
4.6	Conclusion	143
