

Contents

1	Introduction of Cellulase and Its Application	1
1.1	Biofuel as a Suitable Alternative for Fossil Fuel	1
1.2	Enzyme Stability Is One of the Limits in Biofuel Production	3
1.3	A Procedure to in Silico Engineering of Cellulase	3
1.4	Cellulase 7a Selected as a Target	3
1.5	Advantages of Cellulose in Silico Engineering	4
	References	4
2	Literature Review of Cellulase and Approaches to Increase Its Stability	7
2.1	Cellulose and Cellulases Structure	7
2.2	Applications of Cellulase	8
2.2.1	Application of Cellulase in Biofuel Production	8
2.3	<i>Trichoderma reesei</i> Known as the Crowned King of Cellulolytic Fungi	10
2.4	Catalytic Mechanisms of Glycoside Hydrolases	10
2.5	An Introduction to Cellulase Family 7	12
2.6	Cellulose Biodegradation Procedures	13
2.7	Protein Engineering as a Solution	13
2.7.1	Rational Design Approach	14
2.8	Advantages of Enzyme Thermo Stabilization	16
2.9	Some Thermo Stabilize Mutations	16
2.9.1	Introducing Disulfide Bonds as a Strategy to Increase Stability	16
2.10	Molecular Dynamic Simulation as a Strong Approach to Evaluating Structure Stability	18
	References	19

3	Methodology of Mutant Creation and Molecular Dynamic Simulation	23
3.1	Obtaining Protein Structure File	23
3.2	Fixing pdb File.	24
3.2.1	Removing Water Molecule and Ligands.	24
3.3	Generation of Mutated pdb Files.	24
3.4	Molecular Dynamic Simulation Steps	24
3.4.1	pdb2gmx (Topology File Generation) Tool.	26
3.4.2	Unit Cell Defining the by the Tools, editconf and Adding Solvent.	26
3.4.3	Addition of Ions	27
3.4.4	Energy Minimization as a Critical Step	27
3.4.5	Equilibration of Temperature and Pressure	28
3.4.6	MD Production	28
3.5	Tools for Analysis of Molecular Dynamics Trajectory	29
	References.	29
4	Result and Discussion of Molecular Dynamic Simulation of Created Mutants.	31
4.1	Nominated Residues for Mutation	31
4.2	Native Protein Structure and Stability Analysis	32
4.3	Mutated Protein Number 1 (E385C and A392C) Structure and Stability Analysis	33
4.4	Mutated Protein Number 2 (Y321C and A333C) Structure and Stability Analysis	37
4.5	Mutated Protein Number 3 (T383C and T399C) Structure and Stability Analysis	40
4.6	Mutated Protein Number 4 (A187C) Structure and Stability Analysis	41
4.7	Mutated Protein Number 5 (D257C and L346C) Structure and Stability Analysis	44
5	Conclusion of Simulation Analysis of Mutants	47
5.1	Conclusion of MD Simulation of Created Mutants	47
5.2	Future Work of the Disulfide Bond Engineering to Cellulase	48

In Silico Engineering of Disulphide Bonds to Produce
Stable Cellulase

Barati, B.; Sadegh Amiri, I.

2015, VIII, 48 p. 34 illus., 30 illus. in color., Softcover

ISBN: 978-981-287-431-3
