

Contents

1	Introduction	1
1.1	Subjective Visual Quality Assessment	2
1.2	Image Quality Databases	3
1.3	Video Quality Databases	5
1.4	Classification of Objective Visual Quality Assessment	7
1.4.1	Availability of Reference	8
1.4.2	Methodology for Assessment	8
1.5	Further Discussion on Major Existing Objective Visual Quality Metrics	9
1.5.1	Model-Based Metrics	10
1.5.2	Signal-Driven Metrics	12
1.6	Evaluation Criteria for Assessing Metrics	13
1.7	Emerging Machine Learning-Based Visual Quality Assessment	14
1.8	Significance and Highlights of This Book	15
	References	17
2	Fundamental Knowledge of Machine Learning	23
2.1	Artificial Neural Networks	24
2.2	Support Vector Machine	24
2.2.1	Primal Form	26
2.2.2	Dual Form	26
2.3	Clustering	28
2.4	Bayesian Networks	29
2.5	Representation Learning	29
2.6	Sparse Dictionary Learning	29
2.7	AdaBoost	30
2.8	Deep Learning	31
2.8.1	Deep Neural Networks	31
2.8.2	Deep Belief Network	33
	References	34

3	Image Features and Feature Processing	37
3.1	Types of Image Features	38
3.2	Commonly Used Feature Detectors	38
3.2.1	Laplacian of Gaussian (LoG)	38
3.2.2	Difference of Gaussian (DoG)	39
3.2.3	Gabor Filter Coefficients	41
3.3	Commonly Used Feature Descriptors	42
3.3.1	Scale-Invariant Feature Transform (SIFT)	43
3.3.2	Speeded up Robust Features (SURF)	47
3.3.3	A Global Scene Feature: GIST	48
3.4	Feature Selection and Extraction	48
3.4.1	Fisher Scores	49
3.4.2	Generalized Fisher Scores	50
3.4.3	Laplacian Scores	51
3.4.4	mRMR Method	52
3.4.5	Max-Dependency and Two-Stage Method	53
3.4.6	Principal Component Analysis (PCA)	54
3.4.7	Singular Vector Decomposition (SVD)	56
3.5	Feature Learning	59
3.5.1	K-Means Clustering	60
3.5.2	Sparse Feature Learning	62
	References	63
4	Feature Pooling by Learning	67
4.1	Support Vector Machine Learning for Feature Pooling	68
4.2	SVD-Based Feature and Feature Pooling Using SVM	71
4.2.1	SVD-Based Feature Detection	71
4.2.2	Combining Features into a Perceptual Quality Score	73
4.2.3	Support Vector Regression (SVR)	73
4.3	Rank Learning for Feature Pooling	75
4.3.1	Categorical, Ordinal, and Interval Variables	75
4.3.2	Numerical Rating and Pairwise Comparison	76
4.3.3	Rank Learning Approaches	77
4.3.4	Pairwise Rank Learning Image Quality Assessment (PRLIQA)	79
	References	89
5	Metrics Fusion	93
5.1	Multi-method Fusion (MMF)	94
5.1.1	Support Vector Regression for Fusion	94
5.1.2	MMF Scores	96
5.1.3	Data Scaling and Cross-Validation	97

5.1.4	Training	97
5.1.5	Testing	97
5.2	Context-Dependent MMF	98
5.2.1	Context Definition	98
5.2.2	Automatic Context Determination.	99
5.2.3	Fused IQA Method Selection.	100
5.2.4	Evaluation.	101
5.3	Image Quality Assessment Using ParaBoosting Ensemble	102
5.3.1	Image Quality Scores (IQSs)	106
5.3.2	Evaluation of IQSs, Training Strategy, and ParaBoosting Ensemble (PBE)	114
5.3.3	Scorer Selection for PBE IQA	119
	References	121
6	Summary and Remarks for Future Research.	123
6.1	Summary.	123
6.2	Further Discussions on Future Possibilities	125
6.2.1	3D Quality Assessment.	126
6.2.2	Joint Audiovisual Quality Metrics	126
6.2.3	Computer-Generated Visual Signal Quality Assessment	128
6.3	Final Remarks	129
	References	129

Visual Quality Assessment by Machine Learning

Xu, L.; Lin, W.; Kuo, C.-C.J.

2015, XIV, 132 p. 19 illus., 16 illus. in color., Softcover

ISBN: 978-981-287-467-2
