

Contents

1	Chemical Engineering from Technology to Engineering	1
1.1	Differences Between Technology and Engineering in General and Focusing on this Difference as Related to Chemical Engineering	1
1.2	Concepts, Paradigms and Historical Perspective	4
1.2.1	Traditional Paradigms of Chemical Engineering	4
1.2.2	Chemical Engineering in the Twenty-First Century and the Integrated System Approach (ISA) Based on System Theory (ST)	8
1.2.3	Modern Trends in Chemical Engineering	11
1.2.4	Multi-disciplinary Approach for Development of Novel Processes	16
1.2.5	Innovation and Sequential De-Bottle-Necking	19
1.2.6	Intensification Through Integration and Combination of Different Processes in Single Units	21
1.2.7	Chemical Engineering Expectations on 2020	25
1.2.8	Indispensable Tools for the Success of Chemical and Nanoengineering	28
1.2.9	New Tools, Outlooks and Opportunities for Chemical Engineering in Relation to the Other Engineering Disciplines	29
1.3	Principles of Chemical Engineering	34
1.3.1	Generalized Mass, Momentum and Energy Balances for Multiple Inputs-Multiple Outputs (MIMO), Systems with Multiple Reactions (MRs)	37
1.3.2	Stationary Non-equilibrium State Modeling Approach for Chemical Engineering Systems Based on MIMO-MRs Generalized Mass and Energy Balances	56

1.3.3	Dynamic Modeling Based on MIMO-MRs	62
1.3.4	Simulation and Optimization of Chemical Engineering Systems.	65
1.4	Chemical Engineering and New Materials	65
1.5	Preliminary Introduction to Nano Scale Process Engineering	67
	Exercises	69
	References	70
2	From Nanotechnology to Nanoengineering.	79
2.1	Introduction to Nanotechnology	79
2.1.1	Application of Nanotechnology in Different Fields	80
2.1.2	Nanostructured Materials Synthesis, Concepts and Design	93
2.1.3	Routine Tests for Characterization of Nanostructures	102
2.2	Transforming Nanotechnology into Nanoengineering Through Chemical Engineering Principles	122
2.2.1	Nanotechnology in Support of General Science and Engineering	124
2.2.2	An Industrial Perspective Research Challenges in Nanotechnology	133
	Exercises	163
	References	165
3	Learning Synergism in Nanotechnology and Chemical Engineering by Case Study	179
3.1	Chemical Vapor Deposition (CVD) Techniques in Nanotechnology	179
3.1.1	Basic Principles of CVD	182
3.1.2	Constraints on CVD Processes	194
3.1.3	CVD Synthesis of Carbon Nanotubes (CNTs)	195
3.2	Chemical Vapor Synthesis (CVS) of Nanostructures	234
3.2.1	Basic Principles of CVS	234
3.2.2	Similarity Between CVS, CVD and Inert Gas Condensation.	235
3.2.3	Nanoparticle Synthesis via CVS	238
3.2.4	The CVS Process Simulation	241
3.2.5	Sintering Effect	244
3.3	Precipitation of Nanostructures	247
3.3.1	Definition of the Process	247
3.3.2	Effect of the Process Parameters on the Produced Nanoparticles.	249

3.3.3	General Description of the Nucleation and Growth Steps.	252
	Exercises	264
	References	264
4	Conclusions and Outlook	273
	About the Authors.	275

Nanotechnology for Chemical Engineers

Salah Eldin Elnashaie, S.; Danafar, F.; Hashemipour, H.

2015, XI, 278 p. 113 illus., 37 illus. in color., Hardcover

ISBN: 978-981-287-495-5
