

# Contents

<b>Atomistic Modeling of Electrode Materials for Li-Ion Batteries: From Bulk to Interfaces . . . . .</b>	<b>1</b>
Matthieu Saubanère, Jean-Sébastien Filhol and Marie-Liesse Doublet	
<b>Multi-scale Simulation Study of Pt-Alloys Degradation for Fuel Cells Applications . . . . .</b>	<b>37</b>
G. Ramos-Sánchez, Nhi Dang and Perla B. Balbuena	
<b>Molecular Dynamics Simulations of Electrochemical Energy Storage Devices. . . . .</b>	<b>61</b>
Dario Marrocchelli, Céline Merlet and Mathieu Salanne	
<b>Continuum, Macroscopic Modeling of Polymer-Electrolyte Fuel Cells . . . . .</b>	<b>91</b>
Sivagaminathan Balasubramanian and Adam Z. Weber	
<b>Mathematical Modeling of Aging of Li-Ion Batteries. . . . .</b>	<b>151</b>
Charles Delacourt and Mohammadhosein Safari	
<b>Fuel Cells and Batteries In Silico Experimentation Through Integrative Multiscale Modeling. . . . .</b>	<b>191</b>
Alejandro A. Franco	
<b>Cost Modeling and Valuation of Grid-Scale Electrochemical Energy Storage Technologies . . . . .</b>	<b>235</b>
Kourosh Malek and Jatin Nathwani	

Physical Multiscale Modeling and Numerical Simulation  
of Electrochemical Devices for Energy Conversion and  
Storage

From Theory to Engineering to Practice

Franco, A.A.; Doublet, M.L.; Bessler, W.G. (Eds.)

2016, VII, 249 p., Hardcover

ISBN: 978-1-4471-5676-5
