

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
 <b>Part I Fundamentals</b>		
<b>2</b>	<b>Limb Kinematics</b>	<b>9</b>
2.1	What Is a Limb?.	9
2.2	Forward Kinematic Analysis of Limbs.	12
2.3	The Forward Kinematic Model.	13
2.4	Application of the Forward Kinematic Model to a Simple Planar Limb	15
2.5	Using the Forward Kinematic Model to Obtain Endpoint Velocities.	19
2.6	General Case of the Jacobian in the Context of Screws, Twists, and Wrenches	20
2.7	Using the Jacobian of a Planar System to Find Endpoint Velocities.	22
2.8	Exercises and Computer Code	24
	References.	24
<b>3</b>	<b>Limb Mechanics</b>	<b>25</b>
3.1	Derivation of the Relationship Between Static Endpoint Forces and Joint Torques	25
3.2	Symbolic Example Finding All Permutations of $J$ for a Planar 2 DOF Limb.	27
3.3	Numerical Example Finding All Permutations of $J$ for a Planar 2 DOF Limb.	28
3.4	Relationship Between $J^T$ and the Equations of Static Equilibrium.	30
3.5	Importance of Understanding the Kinematic Degrees of Freedom of a Limb.	31

3.6	Analysis of a Planar 3 DOF Limb. . . . .	32
3.7	Additional Comments on the Jacobian and Its Properties . . . . .	34
3.8	Exercises and Computer Code . . . . .	35
	References. . . . .	36
<b>4</b>	<b>Tendon-Driven Limbs. . . . .</b>	<b>37</b>
4.1	Tendon Actuation . . . . .	38
4.2	Tendon Routing, Skeletal Geometry, and Moment Arms . . . . .	39
4.3	Tendon Excursion. . . . .	41
4.4	Two or More Tendons Acting on a Joint: Under- and Overdetermined Systems. . . . .	43
4.5	The Moment Arm Matrix for Torque Production . . . . .	45
4.6	The Moment Arm Matrix for Tendon Excursions . . . . .	48
4.7	Implications to the Neural Control of Tendon-Driven Limbs . . . . .	50
4.8	Exercises and Computer Code . . . . .	51
	References. . . . .	51
 <b>Part II Introduction to the Neural Control of Tendon-Driven Limbs</b>		
<b>5</b>	<b>The Neural Control of Joint Torques in Tendon-Driven Limbs Is Underdetermined . . . . .</b>	<b>55</b>
5.1	Muscle Activation and Redundancy of Neural Control. . . . .	55
5.2	Linear Programming Applied to Tendon-Driven Limbs . . . . .	58
5.2.1	Canonical Formulation of the Linear Programming Problem. . . . .	59
5.2.2	A Classical Example of Linear Programming: The Diet Problem . . . . .	59
5.3	Linear Programming Applied to Neuromuscular Problems . . . . .	63
5.4	Geometric Interpretation of Linear Programming. . . . .	65
5.5	Exercises and Computer Code . . . . .	68
	References. . . . .	69
<b>6</b>	<b>The Neural Control of Musculotendon Lengths and Excursions Is Overdetermined . . . . .</b>	<b>71</b>
6.1	Forward and Inverse Kinematics of a Limb . . . . .	71
6.2	Forward Kinematics of a 5 DOF Arm . . . . .	72
6.3	Inverse Kinematics of a Limb. . . . .	75
6.3.1	Closed Form Analytical Approach . . . . .	75
6.3.2	Numerical Approach . . . . .	76
6.3.3	Experimental Approach . . . . .	76
6.4	The Overdetermined Problem of Tendon Excursions . . . . .	77

6.4.1	Tendon Excursion Versus Musculotendon	
	Excursion . . . . .	77
6.4.2	Muscle Mechanics . . . . .	78
6.4.3	Reflex Mechanisms Interact with Limb	
	Kinematics, Mechanics, and Muscle Properties . . . . .	81
6.5	Example of a Disc Throw Motion with a 17-Muscle,	
	5 DOF Arm . . . . .	81
6.6	Implications to Neural Control and Muscle Redundancy . . . . .	83
6.7	Exercises and Computer Code . . . . .	85
	References. . . . .	85

### Part III Feasible Actions of Tendon-Driven Limbs

<b>7</b>	<b>Feasible Neural Commands and Feasible Mechanical Outputs . . .</b>	<b>91</b>
7.1	Mapping from Neural Commands to Mechanical Outputs . . . . .	91
7.2	Geometric Interpretation of Feasibility . . . . .	94
7.3	Introduction to Feasible Sets . . . . .	97
7.4	Calculating Feasible Sets for Tasks with No Functional	
	Constraints. . . . .	101
7.5	Size and Shape of Feasible Sets . . . . .	105
7.6	Anatomy of a Convex Polygon, Polyhedron, and Polytope. . . . .	107
7.7	Exercises and Computer Code . . . . .	110
	References. . . . .	110
<b>8</b>	<b>Feasible Neural Commands with Mechanical Constraints . . . . .</b>	<b>113</b>
8.1	Finding Unique Optimal Solutions Versus Finding Families	
	of Valid Solutions. . . . .	113
8.2	Calculating Feasible Sets for Tasks with Functional	
	Constraints. . . . .	116
8.3	Vertex Enumeration in Practice. . . . .	119
8.4	A Definition of Versatility . . . . .	124
8.5	How Many Muscles Should Limbs Have to be Versatile? . . . . .	125
8.6	Limb Versatility Versus Muscle Redundancy . . . . .	127
8.7	Exercises and Computer Code . . . . .	129
	References. . . . .	129

### Part IV Neuromechanics as a Scientific Tool

<b>9</b>	<b>The Nature and Structure of Feasible Sets . . . . .</b>	<b>135</b>
9.1	Bounding Box Description of Feasible Sets . . . . .	135
9.2	Principal Components Analysis Description of Feasible Sets . . . . .	137
9.3	Synergy-Based Description of Feasible Sets . . . . .	140

9.4	Vectormap Description of Feasible Sets . . . . .	143
9.5	Probabilistic Neural Control . . . . .	149
9.6	Exercises and Computer Code . . . . .	154
	References. . . . .	154
<b>10</b>	<b>Implications . . . . .</b>	<b>159</b>
10.1	Muscle Redundancy . . . . .	159
10.2	What This Book Did Not Cover . . . . .	162
10.3	What's in a Name? . . . . .	163
10.4	Motion, Force, and Impedance . . . . .	166
10.5	Agonist Versus Antagonist. . . . .	168
10.6	Co-contraction . . . . .	169
10.7	Exercises and Computer Code . . . . .	172
	References. . . . .	172
	<b>Appendix A: Primer on Linear Algebra and the Kinematics of Rigid Bodies . . . . .</b>	<b>175</b>
	<b>Index . . . . .</b>	<b>191</b>
