1	Introduction: Toward Multi-functionality	1
	References	3
2	Nanoparticles	5
2.1	Introduction	6
2.2	Different Types of Nanoparticles	12
2.2.1	Clay Minerals	12
2.2.2	Graphite Nanoplatelets	17
2.2.3	Carbon Nanotubes	20
2.2.4	Polyhedral Oligomeric Silsesquioxane	23
2.2.5	Other Equiaxed Nanoparticles	24
2.2.6	Hierarchical Structured Particles	25
	References	29
3	Processing	35
3.1	Interfacial Volume and Its Effects	36
3.2	Modification of Nanoparticles	39
3.2.1	Equiaxed Nanoparticles	40
3.2.2	Layered Silicates (Bentonite)	51
3.2.3	Tubular Fillers (Carbon Nanotubes)	54
3.3	Processing of Polymer Nanocomposites	58
3.3.1	Solvent Methods	58
3.3.2	In Situ Polymerization	59
3.3.3	Polymer Melt Intercalation	61
	References	62
4	Microstructural Characterization	69
4.1	Background	70
4.2	Direct and Reciprocal Space Techniques	71
4.3	Etching	74
4.4	Staining	77

4.5	Different Ways of Quantifying Dispersion/Distribution and Sizes of Nanoparticles	81
4.5.1	Equiaxed Nanoparticles	81
4.5.2	Clay Layers (1D Nanoparticles)	85
4.5.3	CNTs (2D Nanoparticles)	91
4.6	Other Advanced Techniques and Summary	96
	References	98
5	Interfaces	103
5.1	Background	104
5.2	Crystallization Behavior	104
5.2.1	Crystallization Temperature	104
5.2.2	Crystal Size/Shape	107
5.2.3	Crystallization Under Nanoscopic Confinement	108
5.3	Spatial (Physical) Confinement in the Presence of Nanoparticles—Changes in T_g	111
5.4	Types of Hybrid Crystalline Structures	112
5.5	Concept of Transcrystallinity (TC) and Its Occurrence	115
5.6	TC in Polymer Nanocomposites	119
5.6.1	TC in the Presence of Layered Silicates	119
5.6.2	Extension of TC in Polymer Nanocomposites	122
5.6.3	Geometric Confinement Effect	123
	References	127
6	Mechanical Properties	133
6.1	Background	134
6.2	Fracture Toughness and Ductility	136
6.3	Rigid Particle Toughening	137
6.4	Mobility Concept	146
6.5	Brittle Behavior of Polymer Nanocomposites	148
6.6	Influence of Transcrystallinity on Toughness/Ductility	149
6.7	Ternary Nanocomposites	152
6.8	Toughening by Inducing Voids	154
	References	156
7	Thermal Properties	161
7.1	Background	162
7.2	Thermal Degradation of Polymers	164
7.3	Thermal Degradation of Polymer Nanocomposites	166
7.3.1	Clay-Based Polymer Nanocomposites	168
7.3.2	Examples Illustrating the Effect of Nanoparticles on Thermal Stability of Polymers	175
7.4	Efforts to Improve Thermal Stability	178
	References	181

8	Flame Retardancy	185
8.1	Background	186
8.2	Fundamentals of Combustion of Polymers	186
8.3	Conventional Flame Retardants	188
8.3.1	Halogen-Based FRs	188
8.3.2	Phosphorous-Based FRs	188
8.3.3	Metal Hydroxides	189
8.3.4	Intumescent Agents and Coatings	189
8.4	Ecological Impact of Conventional Flame Retardants	190
8.5	Flame Retardancy of Polymer Nanocomposites	191
8.5.1	Overall Behavior	191
8.5.2	TTI and Catalytic Activity of Smectite Clay	193
8.5.3	Testing Standards, Residue Quality, and Synergism with Conventional FRs	195
8.5.4	Understanding the Structure of Residues	197
8.6	Thickness of Samples	202
	References	203
9	Wear/Scratch Damage	207
9.1	Background	207
9.2	Nanoparticles Versus Microsized Particles	210
9.3	Some Specific Parameters Affecting Wear/Scratch Damage in Polymer Nanocomposites	213
9.3.1	Transfer Films	213
9.3.2	Crystal Phase	214
9.4	General Comments on Wear/Scratch Damage of Polymer Nanocomposites	216
9.5	Hybrid Approach	218
9.6	Summary	222
	References	222
10	Functional Properties	227
10.1	Optical Properties	228
10.2	Barrier Properties and Permeability	234
10.3	Electrical Conductivity	237
10.3.1	Percolation Threshold	238
10.3.2	Factors Affecting Percolation in Polymer Nanocomposites	239
10.3.3	Volume Exclusion Effect	244
10.4	Dielectric Properties	246
10.5	Biodegradability	250
10.5.1	Factors Affecting Biodegradation	252
10.5.2	Biodegradability of PLA-Based Nanocomposites	253
10.6	Summary	255
	References	256

11	Ecological Issues	263
11.1	Background	264
11.2	Non-biodegradability of Polymeric Materials	264
11.3	Fire Retardants	266
11.3.1	Effects on Environment and Human Health	266
11.3.2	Source and Distribution	270
11.3.3	Efforts to Control/Monitor PBDEs	271
11.4	Food-Packaging Materials—Requirements and Concerns	272
	References	275
12	Applications and Outlook	279
12.1	Background	280
12.2	Polymer/Clay Nanocomposites	281
12.2.1	Automotive Applications	281
12.2.2	Food Packaging and Other Barrier Property-Dependent Applications	282
12.2.3	Miscellaneous Applications	283
12.3	Nanocomposites for Marine Applications	284
12.4	Applications of Conductive Nanoparticles	286
12.5	Shape Memory Polymers	290
12.6	Biomedical Actuators and Other Biomechanical Applications	291
12.7	Summary and Outlook	294
	References	295
