

Contents

1	Introduction	1
1.1	Power System Low-frequency Oscillations	1
1.2	Linearized Methods for the Analysis and Damping Control of Power System Oscillations	3
1.3	FACTS and Grid-Connected ESS	5
1.4	Controllers to Damp Power System Oscillations	7
1.5	Design of Damping Controllers to Suppress Power System Oscillations	10
1.6	Organization of the Book	12
	References	13
2	A Single-Machine Infinite-Bus Power System Installed with a Power System Stabilizer.	17
2.1	Linearized Model of a Single-Machine Infinite-Bus Power System Installed with a Power System Stabilizer	17
2.1.1	General Linearized Mathematical Model.	17
2.1.2	Heffron–Phillips Model	26
2.2	Modal Analysis	32
2.2.1	Basis of Modal Analysis Theory	32
2.2.2	Applications of Modal Analysis	37
2.3	Damping Torque Analysis	42
2.3.1	Damping Torque and Synchronizing Torque	42
2.3.2	Damping Torque Analysis and Design of PSS by Phase Compensation.	47
2.4	Examples	53
2.4.1	Linearized Mathematical Models of an Example Power System.	53
2.4.2	Modal Analysis of Example Power System.	59
2.4.3	Damping Torque Analysis of Example Power System.	66

2.4.4	Equivalence Between the Damping Torque and Modal Analysis	73
	References	79
3	Damping Torque Analysis of Thyristor-Based FACTS Stabilizers Installed in Single-Machine Infinite-Bus Power Systems	81
3.1	A Single-Machine Infinite-Bus Power System Installed with an SVC Stabilizer	81
3.1.1	Extended Heffron—Phillips Model of a Single-Machine Infinite-Bus Power System Installed with an SVC Stabilizer	81
3.1.2	Damping Torque Analysis of SVC Stabilizer	90
3.2	A Single-Machine Infinite-Bus Power System Installed with a TCSC or TCPS Stabilizer	97
3.2.1	Extended Heffron—Phillips Model of a Single-Machine Infinite-Bus Power System Installed with a TCSC or TCPS Stabilizer	97
3.2.2	Damping Torque Analysis of TCSC and TCPS Stabilizers	103
3.3	An Example Power System Installed with an SVC Stabilizer	107
3.3.1	Linearized Model of Example Power System	108
3.3.2	Design of SVC-Based Stabilizer	114
	References	120
4	Single-Machine Infinite-Bus Power Systems Installed with VSC-Based Stabilizers	121
4.1	Damping Torque Analysis of a Shunt VSC-Based Stabilizer Installed in a Single-Machine Infinite-Bus Power System	121
4.1.1	Extended Heffron—Phillips Model of a Single-Machine Infinite-Bus Power System Installed with a Shunt VSC-Based Stabilizer	121
4.1.2	Damping Torque Analysis of Shunt VSC-Based Stabilizer Installed in Single-Machine Infinite-Bus Power System	130
4.2	Damping Function of a Stabilizer Added on a Static Synchronous Series Compensator (SSSC) Installed in a Single-Machine Infinite-Bus Power System	133
4.2.1	Damping Torque Analysis of a SSSC Stabilizer Installed in a Single-Machine Infinite-Bus Power System	133
4.2.2	Design of a SSSC Stabilizer	139

4.3	Damping Function of a Unified Power Flow Controller (UPFC) Installed in a Single-Machine Infinite-Bus Power System	143
4.3.1	Mathematical Model of a Single-Machine Infinite-Bus Power System Installed with a UPFC	143
4.3.2	Design of a UPFC Stabilizer Installed in a Single-Machine Infinite-Bus Power System	155
4.4	Examples	163
4.4.1	An Example Single-Machine Infinite-Bus Power System Installed with a BESS Stabilizer	163
4.4.2	An Example Single-Machine Infinite-Bus Power System Installed with a UPFC Stabilizer	172
	References	182
5	A Multi-machine Power System Installed with Power System Stabilizers	183
5.1	Mathematical Model of a Multi-machine Power System Installed with Power System Stabilizers.	183
5.1.1	A Two-Machine Power System Installed with Power System Stabilizers	183
5.1.2	A Multi-machine Power System Installed with Power System Stabilizers	192
5.2	Modal Analysis and Control of Power System Oscillations in a Multi-machine Power System Installed with Power System Stabilizers.	199
5.2.1	Eigensolution for the Analysis of Power System Oscillations.	199
5.2.2	Design of Power System Stabilizers in a Multi-machine Power System	204
5.2.3	Fixed Modes Associated with PSS Control	209
5.3	An Example Three-Machine Power System.	214
5.3.1	Example Power System and Its Linearized Heffron–Phillips Model	214
5.3.2	Modal Analysis of Example Power System.	221
	References	234
6	Multi-machine Power System Installed with Thyristor-Based FACTS Stabilizers	235
6.1	Mathematical Model of a Multi-machine Power System Installed with Thyristor-Based FACTS Stabilizers.	235
6.1.1	Heffron–Phillips Model	235
6.1.2	General Linearized Model of an N-Machine Power System Installed with Multiple Thyristor-Based FACTS Stabilizers	242

6.2	Analysis and Damping Control of Thyristor-Based FACTS Stabilizers Installed in a Multi-machine Power System	266
6.2.1	Damping Torque Analysis in a Multi-machine Power System	266
6.2.2	Selection of Installing Location and Feedback Signal of a Stabilizer in a Multi-machine Power System	272
6.2.3	Selection of Robust Installing Locations and Feedback Signals of a Stabilizer by an Eigensolution-Free Method	279
6.2.4	Stabilizer Design in a Multi-machine Power System Considering Robustness and Interaction of Stabilizers	282
6.3	An Example Two-Area Four-Machine Power System	289
6.3.1	Linearized Model	289
6.3.2	Selection of Installing Locations of Stabilizers	301
6.4	Example Three-Machine Power System	320
6.4.1	Dynamic Interactions Among PSSs Installed in Example Three-Machine Power System	320
6.4.2	Design of Non-negatively Interactive PSSs Installed in Example Power System	324
	References	328
7	Multi-machine Power Systems Installed with VSC-Based Stabilizers	329
7.1	Mathematical Model of a Multi-machine Power System Installed with VSC-Based Stabilizers	329
7.1.1	Mathematical Model of a Multi-machine Power System Installed with a Shunt VSC-Based Stabilizer	329
7.1.2	Mathematical Model of a Multi-machine Power System Installed with a UPFC-Based Stabilizer	339
7.2	Design of a Shunt VSC-Based Stabilizer by Localized Phase Compensation Method to Suppress Inter-area Line Power Oscillations	349
7.2.1	Localized Small-Signal Model of a VSC-Based Unit in a Multi-machine Power System	350
7.2.2	Design of VSC-Based Stabilizer by Localized Phase Compensation Method	358
7.2.3	Robustness of an ESS-Based Stabilizer to Variation of Line-Loading Conditions	362
7.3	An Example of Multi-machine Power System with a Grid-Connected FC Power Plan	367
7.3.1	Mathematical Model of a Multi-machine Power System with a Grid-Connected FC Power Plant	367
7.3.2	Design of a Stabilizer Attached to the VSC of FC Power Plant by Localized Phase Compensation Method	375

7.4 Damping of Multi-mode Oscillations by Multiple Stabilizers Attached to a Single UPFC 380

7.4.1 Coordinated Design of Multiple Stabilizers by Artificial Fish Swarm Algorithm (AFSA). 381

7.4.2 Examples 383
