<i>Preface</i>	<i>v</i>
<i>Contributors</i>	<i>xi</i>
PART I LABELING STRATEGIES	
1 Semisynthesis and Enzymatic Preparation of Post-translationally Modified α -Synuclein <i>Bruno Fauvet and Hilal A. Lashuel</i>	3
2 Isotope-Labeled Amyloids via Synthesis, Expression, and Chemical Ligation for Use in FTIR, 2D IR, and NMR Studies <i>Tianqi O. Zhang, Maksim Grechko, Sean D. Moran, and Martin T. Zanni</i>	21
PART II KINETICS/MECHANISM	
3 Intermolecular Paramagnetic Relaxation Enhancement (PRE) Studies of Transient Complexes in Intrinsically Disordered Proteins <i>Maria K. Janowska and Jean Baum</i>	45
4 Detection of Helical Intermediates During Amyloid Formation by Intrinsically Disordered Polypeptides and Proteins <i>Andisheb Abedini, Ping Cao, and Daniel P. Raleigh</i>	55
5 Fluorescence Correlation Spectroscopy: A Tool to Study Protein Oligomerization and Aggregation In Vitro and In Vivo. <i>Bankanidhi Sahoo, Kenneth W. Drombosky, and Ronald Wetzel</i>	67
6 Deep UV Resonance Raman Spectroscopy for Characterizing Amyloid Aggregation <i>Joseph D. Handen and Igor K. Lednev</i>	89
7 Analyzing Tau Aggregation with Electron Microscopy <i>Carol J. Huseby and Jeff Kuret</i>	101
PART III OLIGOMERS	
8 Characterization of Amyloid Oligomers by Electrospray Ionization-Ion Mobility Spectrometry-Mass Spectrometry (ESI-IMS-MS) <i>Charlotte A. Scarff, Alison E. Ashcroft, and Sheena E. Radford</i>	115
9 Formation and Characterization of α -Synuclein Oligomers <i>Wojciech Paslawski, Nikolai Lorenzen, and Daniel E. Otzen</i>	133
10 Fluorescence Methods for Unraveling Oligomeric Amyloid Intermediates <i>Niels Zijlstra, Nathalie Schilderink, and Vinod Subramaniam</i>	151

PART IV FIBRILS

- 11 Preparation of Amyloid Fibrils for Magic-Angle Spinning
Solid-State NMR Spectroscopy 173
*Marcus D. Tuttle, Joseph M. Courtney, Alexander M. Barclay,
and Chad M. Rienstra*
- 12 Spin Labeling and Characterization of Tau Fibrils Using Electron
Paramagnetic Resonance (EPR) 185
Virginia Meyer and Martin Margittai
- 13 Preparation of Crystalline Samples of Amyloid Fibrils and Oligomers. 201
Asher Moshe, Meytal Landau, and David Eisenberg
- 14 Quenched Hydrogen Exchange NMR of Amyloid Fibrils 211
Andrei T. Alexandrescu

PART V COMPUTATIONAL APPROACHES

- 15 Studying the Early Stages of Protein Aggregation Using Replica
Exchange Molecular Dynamics Simulations. 225
Joan-Emma Shea and Zachary A. Levine
- 16 Computational Methods for Structural and Functional Studies
of Alzheimer's Amyloid Ion Channels 251
*Hyunbum Jang, Fernando Teran Arce, Joon Lee, Alan L. Gillman,
Srinivasan Ramachandran, Bruce L. Kagan, Ratnesh Lal,
and Ruth Nussinov*
- 17 Analyzing Ensembles of Amyloid Proteins Using Bayesian Statistics. 269
Thomas Gurry, Charles K. Fisher, Molly Schmidt, and Collin M. Stultz

PART VI TOXICITY AND PATHOLOGY

- 18 In Vitro Studies of Membrane Permeability Induced by Amyloidogenic
Polypeptides Using Large Unilamellar Vesicles 283
Ping Cao and Daniel P. Raleigh
- 19 Cell Models to Study Cell-to-Cell Transmission of α -Synuclein 291
Eun-Jin Bae, He-Jin Lee, and Seung-Jae Lee
- 20 Preparation of Amyloid Fibrils Seeded from Brain and Meninges. 299
Kathryn P. Scherpelz, Jun-Xia Lu, Robert Tycko, and Stephen C. Meredith
- Index*. 313

Protein Amyloid Aggregation

Methods and Protocols

Eliezer, D. (Ed.)

2016, XIV, 314 p. 73 illus., 49 illus. in color., Hardcover

ISBN: 978-1-4939-2977-1
